

COMPARATIVE STUDY OF ELECTORAL SYSTEMS (CSES) - MODULE 6 (2021-2026)

CODEBOOK PART 2: VARIABLES DESCRIPTION

SECOND ADVANCE RELEASE - DECEMBER 16, 2025

CSES Secretariat
www.cses.org

HOW TO CITE THE STUDY:

The Comparative Study of Electoral Systems (www.cses.org). CSES MODULE 6
SECOND ADVANCE RELEASE [dataset and documentation]. December 16, 2025
version. doi:10.7804/cses.module6.2025-12-16.

These materials are based on work supported by the American National
Science Foundation (www.nsf.gov) under grant numbers SES-1760058 and
SES-2214278, the GESIS - Leibniz Institute for the Social Sciences,
the University of Michigan, in-kind support of participating election
studies, the many organizations that sponsor planning meetings and
conferences, and the numerous organizations that fund national
election studies by CSES Collaborators.

Any opinions, findings and conclusions, or recommendations expressed
in these materials are those of the author(s) and do not necessarily
reflect the views of the funding organizations.

=====
))) CSES ADVANCE RELEASE - WHAT USERS NEED TO KNOW
 =====

This dataset and all accompanying documentation is the "Second Advance Release" of CSES Module 6 (2021-2026).

An Advance Release is a preliminary version of this CSES product. It thus lacks some of the checking, cleaning, processing, documentation, data, and variables that we anticipate in the Full Release of this product. The product is still in development, and data will be added gradually. Many election studies and variables that will eventually be present in the CSES Module 6 Full Release are unavailable in this file. Advance Releases are provided as a service to the CSES user community for those analysts who find it valuable to work with preliminary versions of the dataset.

Users should anticipate future changes and improvements to the naming, data, and documentation of variables and election studies that appear in an advanced release file. If users wish to re-use their programming syntax/code

on a future release of this product, we recommend that the code be written to accommodate these potential changes.

Users of the Advance Release may also wish to monitor the errata for CSES Module 6 on the CSES website to check for known errors that may impact their analyses. To view errata for CSES Module 6, go to Data Download on the CSES website, navigate to the CSES Module 6 download page, and click on the Errata link in the white box to the right of the page.

We hope that until the Full Release of CSES Module 6 is available, users will find this and future CSES Module 6 Advance Releases helpful in their work.

))) CSES DESIGN, DOCUMENTATION, & WEIGHTS - ADVICE TO USERS

We recommend that researchers become familiar with the CSES design, units of analysis, documentation, and dataset weights before beginning their investigations. For instance, while the set of respondents appearing within each election study represents their respective nations, the group of nations that appear within CSES is not a random sample of countries worldwide. Furthermore, while many election studies include 1,000 or so respondents, other election studies may consist of over 10,000 respondents. Some nations will have studies of more than one election in a CSES module, and occasionally there will be two independent studies of a single election. Last, some election studies include over samples of specific sub-populations or would otherwise benefit from use of the included weight variables. We hope you find our website and documentation useful as you proceed with your work, and welcome any questions or suggestions you have.

))) OVERVIEW OF "CODEBOOK PART 2: VARIABLES DESCRIPTION"

Part 2 of the CSES Codebook provides users with information about the variables in the CSES dataset as well as accompanying information about each polity's election study.

))) HOW TO NAVIGATE THE CSES MODULE 6 CODEBOOK

In the CSES MODULE 6 dataset, all variables begin with the letter "F" (F being the sixth letter of the English alphabet and thus signifying MODULE 6).

The CSES Codebook is especially extensive and users are advised that the best way to navigate it is electronically. It is a .txt format which allows it to be accessed via a variety of programs.

In this part of the Codebook (Part 2), the headers for individual variables are surrounded by two lines of dashes. For e.g.,

```
-----
VARIABLE NAME                VARIABLE DESCRIPTION
-----
```

The CSES Codebook can be navigated quickly in the electronic files, with the following commands allowing for quick searching:

))) = Section Header.

>>> = Sub-section Header 1.

<<>> = Sub-section Header 2.

+++ = Tables.

CSES QUESTION CLASSIFICATION = For survey level variables only, CSES Question Classification details whether the variable is part of the CSES Core component, which are questions asked repeatedly in CSES Modules, whether a variable is part of the CSES Module Theme component, which are questions specific to the Module Theme under exploration and might not be included in CSES repeatedly, or whether a variable is a Derivative Variable, which is explained below.

VARIABLE NOTES = Notes for particular variables.

ELECTION STUDY NOTES = Notes for a particular election study.

DERIVATIVE VARIABLE = Highlights a variable derived from another variable or variables within the CSES.

POTENTIAL POLITY LEVEL BRIDGING IDENTIFIER = Highlights a variable that may be used for data bridging at polity level.

POTENTIAL REGIONAL LEVEL BRIDGING IDENTIFIER = Highlights a variable that may be used for data bridging at regional level.

POTENTIAL TIME BRIDGING IDENTIFIER = Highlights a variable that may be used for data bridging by time.

POTENTIAL PARTY/COALITION LEVEL BRIDGING IDENTIFIER = Highlights a variable that may be used for data bridging at party/coalition level.

POTENTIAL CSES PRODUCT BRIDGING IDENTIFIER = Highlights a variable that may be used for data bridging with other CSES products.

For further details on the CSES MODULE 6 documentation, users are advised to consult Part 1 of the CSES Codebook.

```
=====
))) CSES CODEBOOK - VARIABLE NOTES AND ELECTION STUDY NOTES
```

<<>> VARIABLE NOTES

Variable notes provide information on the rationale of a variable as well as source information for that variable. It also details the polities for which no data for that particular variable are available. VARIABLE NOTES are listed below the descriptive information for the said variable and can be navigated in the Codebook by searching for "VARIABLE NOTES" in Part 2 of the CSES Codebook.

<<>> ELECTION STUDY NOTES

A unique dimension of the CSES are the inclusion of ELECTION STUDY NOTES. They are notes which are attached to each variable included in the dataset and refer to case-specific information regarding a particular variable. Their purpose is to provide users with more detailed information on the case or explain essential deviations specific to cases from CSES conventions. They are also used to provide source data information for users. Where applicable, ELECTION STUDY NOTES are listed below a particular variable and any VARIABLE NOTES in Part 2 and 3 of the CSES Codebook. They can be navigated in the Codebook by searching for "ELECTION STUDY NOTES" in Parts 2-4 of the CSES Codebook.

))) DERIVATIVE VARIABLES

CSES MODULE 6 includes several derivative variables. A derivative variable is a variable that is derived from another variable or variables within the CSES. Their purpose is to facilitate speedier analysis for users with derivative variables capturing some of the most common analytical concepts in the discipline.

A list of the DERIVATIVE VARIABLES are below this explanation and can be navigated in the Codebook by searching for DERIVATIVE VARIABLES in Part 2 of the CSES MODULE 6 Codebook.

- F2001_A AGE OF RESPONDENT (IN YEARS)
- F2001_GG BIRTH GENERATION: GREATEST GENERATION
(BORN 1927 OR BEFORE)
- F2001_GS BIRTH GENERATION: SILENT GENERATION
(BORN FROM 1928 TO 1945)
- F2001_GBB BIRTH GENERATION: BABY BOOMERS
(BORN FROM 1946 TO 1964)
- F2001_GX BIRTH GENERATION: GENERATION X
(BORN FROM 1965 TO 1980)
- F2001_GY BIRTH GENERATION: GENERATION Y
(BORN FROM 1981 TO 1996)
- F2001_GZ BIRTH GENERATION: GENERATION Z
(BORN FROM 1997 ONWARDS)
- F3010_TS TURNOUT SWITCHER BETWEEN CURRENT ELECTION AND
PREVIOUS ELECTION

- F3010_FTV FIRST-TIME VOTER IN CURRENT MAIN ELECTION
- F3011_OUTGOV CURRENT MAIN ELECTION: VOTE CHOICE -
OUTGOING GOVERNMENT (INCUMBENT)
- F3011_VS_1 VOTE SWITCHER BETWEEN CURRENT ELECTION AND
PREVIOUS ELECTION
- F3011_LR_CSES CURRENT MAIN ELECTION -
VOTE FOR LEFTIST/CENTER/RIGHTIST - CSES
- F3011_LR_MARPOR CURRENT MAIN ELECTION - VOTE FOR LEFTIST/RIGHTIST (RILE)
- MARPOR/CMP
- F3011_IF_CSES CURRENT MAIN ELECTION - VOTE CHOICE BY
IDEOLOGICAL FAMILY CLASSIFICATION - CSES
- F3100_LR_CSES CURRENT MAIN ELECTION - VOTE CHOICE LINKED WITH
CSES COLLABORATOR EXPERT JUDGMENT L-R
- F3100_LR_MARPOR CURRENT MAIN ELECTION - VOTE CHOICE LINKED WITH
MARPOR/CMP RILE
- F3100_POP_CSES CURRENT MAIN ELECTION - VOTE CHOICE LINKED WITH
CSES COLLABORATOR EXPERT JUDGMENT ON POPULISM
- F3100_IF_CSES CURRENT MAIN ELECTION - VOTE CHOICE LINKED WITH
CSES COLLABORATOR EXPERT JUDGMENT IDEOLOGICAL FAMILY
- F5019_C PARTY OF THE PRESIDENT CHANGED
- F5020_C PARTY OF THE PRIME MINISTER CHANGED

))) CSES MODULE 6 CODING OF PARTIES/COALITIONS & LEADERS

CSES codes parties/coalitions in its dataset numerically and alphabetically. Below we provide explanations of both of these coding schemes. The details of each party/leader classification are available in Part 3 of the Codebook.

<<>> CSES NUMERICAL PARTY/COALITION CODING

Each party is assigned a unique numerical code which consists of two components and six digits in total:

- the first three digits indicate the numerical country UN code
- the latter three digits indicate the numerical party code within the given election study.

All parties/coalitions or Presidential candidates, where applicable, participating in the election or the previous election receive a numerical code. These codes are used to identify the following:

- who a respondent voted for in the current election (variables F3011_).
- who the respondent voted for in the previous election (variables F3016_).
- the respondent's party identification (variable F3023_3).

The numeric coding is also used to identify macro level information about the parties/coalitions, namely:

- numeric party code identifiers for relational data (F5000_)
- numeric party code identifiers for leaders' party affiliations (variables F5000_L_)
- which party/coalition held the Presidency before and after the elections (variable F5019_1 and F5019_2).

- which party/coalition held the Prime Ministership before and after the elections (variable F5020_1 and F5020_2).
- which party/coalition held the ministry of finance before and after the elections (variable F5023_1 and F5023_2).
- which party/coalition held the foreign ministry before and after the elections (variable F5023_3 and F5023_4).
- which party/coalition held the health ministry before and after the elections (variable F5023_5 and F5023_6).

Numerical codes assigned to parties/coalitions are consistent for the current and previous election.

<<>> CSES ALPHABETICAL PARTY/COALITION CODING

Parties A through F are the six most popular parties/coalitions, ordered in descending order of their share of the popular vote in the parliamentary election (unless otherwise stated). Thus Party A is the party/coalition that received the most votes in the election, party B the second most votes, etc...

Parties/coalitions who achieve at least 1% of the vote nationally are eligible for an alphabetical A-F assignment. In countries with multiple electoral tiers and where one vote is cast, parties are ordered according to their vote share in tier 1 (the lowest tier), unless otherwise stated. In countries where voters have two votes (i.e., a constituency and a list vote) simultaneously, for example Germany, parties are ordered by the national share of the party list vote (tier 2).

Parties G, H, and I are supplemental parties. They may, but do not have to, accord with how parties A-F are ordered, that is ordered on the popular share of the vote in a country. More often, they are codified in no particular order. These parties are voluntarily provided by each country's election study and often reflect important or notable parties within a country. They may also include data about individual parties within a coalition, where data about the coalition and the individual parties, or some of these parties that make it up, are provided.

These codes are used to identify the following in the micro component of the CSES dataset:

- Respondent's likeability of the party/coalition (variable F3018).
- Respondent's left-right placement of the party/coalition (variable F3020).
- Respondent's placement of the party/coalition on an alternative scale, if applicable (variable F3021).

These alphabetical codes are used to identify district and macro level information about these said parties/coalitions, namely:

- The said party/coalition's vote share in the respondent's electoral district (variable F4004).
- the said party/coalition's share of the seats in the election in the respondent's electoral district (variable F4005).
- the said party/coalition's share of the vote in the election (variables F5001, F5003, F5005, and F5006).
- the said party/coalition's share of the seats in the election (variables F5002 and F5004).

- the said party/coalition's share of cabinet portfolios before and after the election (variables F5021 and F5022).
- expert judgments by the national Collaborators of the said party/coalition's ideological family (variable F5028).
- expert judgments by the national Collaborators of the said party/coalition's left-right placement (variable F5029).
- expert judgments by the national Collaborators of the said party/coalition's placement on an alternative scale, if applicable (variable F5030).
- expert judgments by the national Collaborators of the said party/coalition's level of populism (variable F5031).
- The said party/coalition's Manifesto Research on Political Representation (MARPOR/CMP) Identifier (variable F5200).
- The said party/coalition's Parliaments and Government Database (ParlGov) Identifier (variable F5201).
- The said party/coalition's Chapel Hill Expert Survey (CHES) Identifier (variable F5202).
- The said party/coalition's Party Facts Identifier (variable F5203).

<<>> CSES ALPHABETICAL LEADER CODING

Leaders A through F tend to be the leaders of the six most popular parties/coalitions or the Presidential candidates of these parties. They correspond to parties A-F (i.e., Leader A will be related to Party A in some way, Leader B will be related to Party B, etc.).

Leaders G, H, and I are supplemental leaders. They may be related to parties G, H, I, but they do not have to be. These leaders are voluntarily provided by each country's election study and often include data about additional personalities of interest. For example, in a parliamentary system, data about a President might be provided, even if the Presidency is not being contested. On many occasions, slots Leader G, H, and I will include additional data for parties/coalitions that have multiple leaders. These codes are used to identify the following in the micro and macro components of the CSES dataset:

- Respondent's likeability of the leader/personality in question (variable F3019).
- the said leader/personality's biological sex (F5000_L_ABS-IBS).

))) CSES DATA BRIDGING: NEW FRONTIERS

Data Bridging enables users to bring together information from CSES with other data sources. The concept is part of CSES Data Linkage efforts. CSES has been a pioneer of Data Linkage with the inclusion of various macro-level data originating from other sources (e.g., The World Bank, the IDEA) directly in CSES data products, including in CSES MODULE 6. These macro data classify the political system's characteristics and contextual conditions of a polity at the election time.

Data Bridging gives users the power to build on the direct data linkage in CSES products by enabling users to easily link other data with CSES products. CSES MODULE 6 enables users to bridge data with other prominent

datasets in political science by including standard identifiers at the polity, year, and party level used by other projects to facilitate merging.

CSES MODULE 6 facilitates data bridging with other datasets at the polity level with the following variables:

- F1006_UN ID COMPONENT - POLITY UN ISO_3166-1 NUMERIC CODE
- F1006_UNALPHA2 ID COMPONENT - POLITY UN ISO_3166-1 ALPHABETIC TWO LETTER CODE
- F1006_NAM ID COMPONENT - POLITY NAME
- F1007_VDEM ID COMPONENT - V-Dem POLITY IDENTIFIER

More details can be found on all these variables in CSES Codebook Part 2 by searching for the variable name (e.g., "F1006_UN") or using the search term "POTENTIAL POLITY LEVEL BRIDGING IDENTIFIER".

CSES MODULE 6 facilitates data bridging with other datasets at the regional level through the following variables:

- F1007_REG ID COMPONENT - POLITY UN GEOGRAPHIC REGIONS NUMERIC CODES

More details can be found on all these variables in CSES Codebook Part 2 by searching for the variable name (e.g., "F1007_REG") or using the search term "POTENTIAL REGIONAL LEVEL BRIDGING IDENTIFIER".

CSES MODULE 6 facilitates data bridging with other datasets by date through the following variables:

- F1009 ID COMPONENT - ELECTION YEAR
- F1010_M DATE 1ST ROUND ELECTION BEGAN - MONTH
- F1010_D DATE 1ST ROUND ELECTION BEGAN - DAY
- F1010_Y DATE 1ST ROUND ELECTION BEGAN - YEAR
- F1010_1 DATE 1ST ROUND ELECTION BEGAN - YYYY-MM-DD
- F1010_2 DATE 1ST ROUND ELECTION BEGAN - YYYYMM
- F1011_M DATE 2ND ROUND ELECTION BEGAN - MONTH
- F1011_D DATE 2ND ROUND ELECTION BEGAN - DAY
- F1011_Y DATE 2ND ROUND ELECTION BEGAN - YEAR
- F1011_1 DATE 2ND ROUND ELECTION BEGAN - YYYY-MM-DD
- F1011_2 DATE 2ND ROUND ELECTION BEGAN - YYYYMM

More details can be found on all these variables in CSES Codebook Part 2 by searching for the variable name (e.g., "F1009") or using the search term "POTENTIAL TIME BRIDGING IDENTIFIER".

CSES MODULE 6 facilitates data bridging with other datasets at the party/coalition level with the following variables:

- F5200_A-I MANIFESTO RESEARCH ON POLITICAL REPRESENTATION (MARPOR/CMP) IDENTIFIER - PARTY A-I
- F5201_A-I PARLIAMENTS AND GOVERNMENT DATABASE (PARLGOV) IDENTIFIER - PARTY A-I
- F5202_A-I CHAPEL HILL EXPERT SURVEY (CHES) IDENTIFIER - PARTY A-I
- F5203_A-I PARTY FACTS IDENTIFIER - PARTY A-I

More details can be found on all these variables in CSES Codebook Part 2 by searching for the variable name (e.g., "F5200_A") or using the search term "POTENTIAL PARTY/COALITION LEVEL BRIDGING IDENTIFIER."

Users can also see the specific bridging codes for each party/coalition assigned an alphabetical code in CSES by other projects in Part 3 of the CSES MODULE 6 Codebook.

CSES MODULE 6 facilitates data bridging with other CSES products at the party/coalition level with the following variables:

- | | |
|---------------|---|
| - F6000_PR_1 | IMD BRIDGING VARIABLE: CURRENT PRESIDENTIAL
ELECTION: VOTE CHOICE - 1ST ROUND |
| - F6000_PR_2 | IMD BRIDGING VARIABLE: CURRENT PRESIDENTIAL
ELECTION: VOTE CHOICE - 2ND ROUND |
| - F6000_LH_PL | IMD BRIDGING VARIABLE: CURRENT LOWER HOUSE
ELECTION: VOTE CHOICE: PARTY LIST |
| - F6000_LH_DC | IMD BRIDGING VARIABLE: CURRENT LOWER HOUSE
ELECTION: VOTE CHOICE: DISTRICT CANDIDATE |

More details can be found on all these variables in CSES Codebook Part 2 by searching for the variable name (e.g., "F6000_PR_1") or using the search term "POTENTIAL CSES PRODUCT BRIDGING IDENTIFIER".

))) LIST OF TABLES IN CODEBOOK PART 2

Below, we list the Tables located in Codebook Part 2. Tables can be accessed in the electronic version of the CSES Codebook by searching for "+++".

- ELECTION STUDIES BY TYPE OF ELECTION
- DATES OF FIELDWORK BY POLITY
- TYPE OF ORIGINAL WEIGHTS BY INDIVIDUAL ELECTION STUDIES
- INCOME MEASURE TYPE BY ELECTION STUDY
- ELECTION STUDIES BY TYPE OF MAIN ELECTION
- ELECTION STUDIES BY TYPE OF MAIN ELECTION
- PREVIOUS PRESIDENTIAL ELECTION (1ST ROUND) AND THE YEAR IN WHICH IT WAS HELD
- PREVIOUS LOWER HOUSE ELECTION AND THE YEAR IN WHICH IT WAS HELD
- PREVIOUS UPPER HOUSE ELECTION AND THE YEAR IN WHICH IT WAS HELD
- FREQUENCIES OF RESPONDENTS REPORTING THAT THEY HAD NOT HEARD OF A SPECIFIC PARTY BUT PROVIDE AN EVALUATION OF THE PARTY ON ANY OTHER SCALE
- FREQUENCIES ON F3020_ AND F3020_R FOR RESPONDENTS REPORTING THAT THEY DID NOT KNOW OF THE LEFT-RIGHT SCALE BUT PROVIDE AN EVALUATION OF A PARTY ON THE LEFT-RIGHT SCALE
- FREQUENCIES ON F3021_ AND F3021_R FOR RESPONDENTS WHO SAID THEY DID NOT KNOW OF THE ALTERNATIVE SCALE IN ONE VARIABLE, BUT EVALUATING OTHER PARTIES ON THE ALTERNATIVE SCALE
- FREQUENCIES ON F3023 3 FOR RESPONDENTS THAT DO NOT FEEL CLOSE

- (F3023_1) OR AT LEAST CLOSER (F3023_2) TO A PARTY
- FREQUENCIES ON F3023_4 FOR RESPONDENTS THAT DO NOT MENTION A PARTY IN F3023_3
 - PERCENTAGE OF WOMEN IN PARLIAMENT AFTER THE CURRENT ELECTION ASKED ABOUT IN F3024
 - SUMMARY OF POLITY AND WHICH ELECTION IN THAT POLITY THAT THE DISTRICT DATA REFERS TO
 - TOTAL NUMBER OF ELECTORAL DISTRICTS PER POLITY AND TOTAL NUMBER OF ELECTORAL DISTRICTS REPRESENTED IN CSES DATA
 - NAME OF PRESIDENT BEFORE ELECTION BY POLITY
 - NAME OF PRESIDENT AFTER ELECTION BY POLITY
 - NAME OF PRIME MINISTER BEFORE ELECTION BY POLITY
 - NAME OF PRIME MINISTER AFTER ELECTION BY POLITY
 - YEAR WHICH IS REFERRED TO FOR T-4 (F5027_2)
 - YEAR WHICH IS REFERRED TO FOR T-8 (F5027_3)
 - GINI COEFFICIENT YEAR OF CALCULATION BY ELECTION STUDY
 - DATE ON WHICH ESTIMATE FOR T OBTAINED (F5089_1)
 - DATE ON WHICH ESTIMATE FOR T-1 OBTAINED (F5089_2)
 - DATE ON WHICH ESTIMATE FOR T-2 OBTAINED (F5089_3)
 - DATE ON WHICH ESTIMATE FOR T OBTAINED (F5090_1)
 - DATE ON WHICH ESTIMATE FOR T-1 OBTAINED (F5090_2)
 - DATE ON WHICH ESTIMATE FOR T-2 OBTAINED (F5090_3)
 - DATE ON WHICH ESTIMATE FOR T OBTAINED (F5091_1)
 - DATE ON WHICH ESTIMATE FOR T-1 OBTAINED (F5091_2)
 - DATE ON WHICH ESTIMATE FOR T-2 OBTAINED (F5091_3)
 - DATE ON WHICH ESTIMATE FOR T OBTAINED (F5092_1)
 - DATE ON WHICH ESTIMATE FOR T-1 OBTAINED (F5092_2)
 - DATE ON WHICH ESTIMATE FOR T-2 OBTAINED (F5092_3)
 - DATE ON WHICH ESTIMATE FOR T OBTAINED (F5093_1)
 - DATE ON WHICH ESTIMATE FOR T-1 OBTAINED (F5093_2)
 - DATE ON WHICH ESTIMATE FOR T-2 OBTAINED (F5093_3)
 - DATE ON WHICH ESTIMATE FOR T OBTAINED (F5094_1)
 - DATE ON WHICH ESTIMATE FOR T-1 OBTAINED (F5094_2)
 - DATE ON WHICH ESTIMATE FOR T-2 OBTAINED (F5094_3)
 - PARTIES INCLUDED IN F3011_PR_ FOR WHICH IMD NUMERIC PARTY CODES HAVE NOT BEEN ASSIGNED YET
 - PARTIES INCLUDED IN F3011_LH_PL FOR WHICH IMD NUMERIC PARTY CODES HAVE NOT BEEN ASSIGNED YET
 - PARTIES INCLUDED IN F3011_LH_DC FOR WHICH IMD NUMERIC PARTY CODES HAVE NOT BEEN ASSIGNED YET

|

| F1002_VER reports the version date (i.e., the release date) of

| the CSES MODULE 6 dataset.

```
-----
F1002_DOI    >>> DIGITAL OBJECT IDENTIFIER
-----
```

Dataset version: Digital Object Identifier (DOI).

doi: 10.7804/cses.module6.2025-12-16.

| VARIABLE NOTES: F1002_D0I

| F1002_D0I reports the Digital Object Identifier (DOI) registered
 | for the CSES MODULE 6. DOI registration is with the DA|RA
 | registration agency for economic and social science data. Each
 | CSES MODULE 6 dataset version (see Variable F1002_VER) has a
 | unique, persistent DOI.

 F1003_1 >>> ID VARIABLE - RESPONDENT

Respondent Identifier.

| VARIABLE NOTES: F1003_1

| F1003_1 is an eighteen character variable uniquely identifying a
 | respondent within CSES MODULE 6.
 | The variable is constructed from three components: variable
 | F1006 (CSES polity code), F1009 (election year), and F1003_2
 | (respondent within election study).

| The first three characters are the numeric version of the
 | country codes created by the United Nations Statistics Division
 | ("countries or areas, codes and abbreviations", revised February
 | 13, 2002).

| If appropriate, the fourth character distinguishes between
 | multiple studies conducted within a single country, for the same
 | election. If only one study is in place for the election, this
 | character appears as a zero (0).

| The fifth through eighth characters correspond to the election
 | year as specified in variable F1009.

| The last ten characters are the respondent identifier from
 | F1003_2, which is unique within each election study.

 F1003_2 >>> ID COMPONENT - RESPONDENT WITHIN ELECTION STUDY

A01. Respondent identifier.

| VARIABLE NOTES: F1003_2

|
| F1003_2 is ten characters in length and is a unique identifier
| for each survey respondent within an election study.
|
| While this variable uniquely identifies a respondent within
| an election study, it is not unique across CSES MODULE 6.

F1004 >>> ID VARIABLE - ELECTION STUDY (POLITY ALPHABETIC

| VARIABLE NOTES: F1004
|
| F1004 is an eight-character variable that identifies an
| election study within CSES MODULE 6. The variable is constructed
| from two components, namely: Variable F1006_UNALPHA3 (Polity
| alphabetical three letter code) and F1009 (election year).
|
| The first three characters are the alphabetic country codes
| 'alpha-3' created by the International Organization for
| Standardization in their ISO 3166 Standard and shared by the
| United Nations Statistics Division (see Variable F1006_UNALPHA3).
| If appropriate, the fourth character distinguishes between
| multiple studies conducted within a single country, for the same
| election. If only one study is in place for the election, this
| character appears as an underscore (_).
|
| The fifth through eighth characters correspond to the election
| year as specified in Variable F1009.

| VARIABLE NOTES: F1006_NAM

| POTENTIAL POLITY LEVEL BRIDGING IDENTIFIER

| F1006_NAM is a string variable identifying a polity conducting
 | an election study present in CSES MODULE 6.

| F1006_NAM consists of polity names based on those principally
 | used by the United Nations Statistics Division ("Countries or
 | areas, codes and abbreviations", revised February 13, 2002).
 | However, in some instances, polity names deviate from those used
 | by the United Nations.

| Politics above are listed in alphabetical order.

| ELECTION STUDY NOTES - TURKIYE (2023): F1006_NAM

| In 2022, the Turkish government officially changed the polity's
 | name from Turkey to Turkiye. As CSES uses the name of a polity
 | as of the election date (May 2023), the country is referred to
 | as "Turkiye" throughout CSES MODULE 6.

| VARIABLE NOTES: F1007_REG

| POTENTIAL REGIONAL LEVEL BRIDGING IDENTIFIER

| F1007_REG is a numeric variable identifying the geographic region of a polity conducting an election study present in CSES MODULE 6.

| F1007_REG provides the geographical region codes applied by the United Nations Statistics Division. The geographic regions are based on continental regions which are further subdivided.

| Source of data: <https://unstats.un.org/unsd/methodology/m49/> (Date accessed: March 28, 2024).

| ELECTION STUDY NOTES - TAIWAN (2024): F1007_REG

| Taiwan is not included in the UN classification. The polity has been classified as "030. EASTERN ASIA" for F1007_REG.

F1007_OECD >>> ID COMPONENT - POLITY MEMBER OF OECD

Polity a member of the Organization for Economic Cooperation and Development (OECD) at the time of the election.

- 0. POLITY NOT A MEMBER OF OECD AT THE TIME OF ELECTION
- 1. POLITY A MEMBER OF OECD AT THE TIME OF ELECTION

| VARIABLE NOTES: F1007_OECD

| The Organization for Economic Cooperation and Development (OECD) is an intergovernmental economic organization founded in 1961 to stimulate economic progress and world trade.

| Source of data: <https://www.oecd.org/about/members-and-partners/>
 | (Date accessed: March 24, 2024).

F1007_EU >>> ID COMPONENT - POLITY MEMBER OF EUROPEAN UNION

Polity a member of the European Union (EU) at the time of the election.

- 0. POLITY NOT EU MEMBER AT THE TIME OF ELECTION
- 1. POLITY A MEMBER OF EU AT THE TIME OF ELECTION
- 7. NOT APPLICABLE: NOT IN CONTINENTAL EUROPE

| VARIABLE NOTES: F1007_EU

| The European Union (EU) is a political and economic union of polities located primarily in Europe. The EU came into being in 1993 as the Maastricht Treaty came into force. The Union traces its origins to the European Coal and Steel Community (ECSC) established in 1951 and the European Economic Community (EEC) established in 1957 under the Treaty of Rome.

| Source of data:
 | https://europa.eu/european-union/about-eu/countries_en
 | (Date accessed: March 28, 2024).

F1007_VDEM >>> ID COMPONENT - V-Dem POLITY IDENTIFIER

Polity identifier in the Varieties of Democracy (V-Dem) project.

005. SWEDEN
 006. SWITZERLAND
 017. POLAND
 019. BRAZIL
 020. UNITED STATES
 021. PORTUGAL
 048. TAIWAN
 067. AUSTRALIA
 076. FRANCE
 099. TURKIYE
 144. AUSTRIA
 158. DENMARK
 176. NORTH MACEDONIA
 183. MONTENEGRO
 185. NEW ZEALAND
 201. SLOVAKIA
 202. SLOVENIA

| VARIABLE NOTES: F1007_VDEM
 |
 | POTENTIAL POLITY LEVEL BRIDGING IDENTIFIER
 |
 | F1007_VDEM identifies a polity conducting an election study
 | that is present in CSES MODULE 6 and links it with the numerical
 | code assigned to the polity by the Varieties of Democracy (V-Dem)
 | project. V-Dem provides a multidimensional and disaggregated
 | dataset that reflects the complexity of the concept of democracy
 | distinguishing between five high-level principles of democracy:
 | electoral, liberal, participatory, deliberative, and egalitarian,
 | and collects data to measure these principles.
 |
 | Source of data: <https://v-dem.net>
 | (Data accessed: March 28, 2024).

 F1008 >>> ID COMPONENT - WHETHER POLITY ADMINISTERED CSES MODULE 6
 MULTIPLE TIMES

Whether or not a polity administered CSES MODULE 6 multiple times.

- 0. R IN POLITY THAT DID NOT ADMINISTER MODULE MULTIPLE TIMES
- 1. R IN POLITY THAT DID ADMINISTER MODULE MULTIPLE TIMES

| VARIABLE NOTES: F1008
 |
 | F1008 details whether the CSES MODULE 6 Questionnaire was
 | administered more than once in a polity or not.
 |

| Conventionally, a CSES Module is intended to be administered
 | during a consecutive period of five years. Given that most
 | electoral cycles encompass a regular four to five year period,
 | 16 out of 17 polities included in CSES MODULE 6 Advance Release 2
 | fielded the Questionnaire once.
 |
 | However, in one polity that experienced more than one election
 | in the 2021-2026 MODULE 6 administration period, CSES MODULE 6
 | was fielded twice. This applies to the following studies:
 | PORTUGAL (2022 & 2024).

 F1009 >>> ID COMPONENT - ELECTION YEAR

Election year.

.....
 2021-2026. ELECTION YEAR

| VARIABLE NOTES: F1009
 |
 | POTENTIAL TIME BRIDGING IDENTIFIER
 |
 | F1009 details the year in which an election was held for a study
 | included in CSES MODULE 6.
 |
 | The official period covered by CSES MODULE 6 is from 2021 to
 | 2026, coinciding with the development of the pilot and finalized
 | questionnaire.

 F1010_M >>> DATE 1ST ROUND ELECTION BEGAN - MONTH

9999. MISSING

| VARIABLE NOTES: F1010_M-F1010_Y

| POTENTIAL TIME BRIDGING IDENTIFIER

| F1010_M-F1010_Y represent the start date of the election.

| ELECTION STUDY NOTES - DENMARK (2022): F1010_

| The Danish legislative elections were held on November 1, 2022,
 | except for the Faroe Islands, where elections were held early
 | on October 31, due to a holiday the following day. F1010_
 | classify November 1, 2022 as the election date.

| ELECTION STUDY NOTES - NEW ZEALAND (2023): F1010_

| Lower house elections in New Zealand were held on October 14,
 | 2023, as specified in F1010_.
 | However, researchers are advised that of the 72 district-
 | candidate seats in the New Zealand Parliament, only 71 were
 | filled on election day. In the Port Waikato District,
 | a by-election was held on November 25, 2023, as the electorate
 | vote for this single-member district was postponed due to the
 | death of a candidate, Neil Christensen, during the campaign.
 | Still, the party-list vote in Port Waikato was held on the
 | regular general election day. Respondents from Port Waikato can
 | be identified in variable F2019 (Primary Electoral District),
 | in which they are assigned code 39.

| ELECTION STUDY NOTES - NORTH MACEDONIA (2024): F1010_

| The North Macedonia (2024) study includes vote choice data for
 | both the 2024 Presidential and legislative elections. As the
 | latter constitute the main election, F1010_ reports May 8, 2024,

| as the date of election, i.e., the day on which parliamentary
| elections were held.
| However, researchers are advised that legislative elections
| coincided with the second round of the 2024 Presidential
| election. The first round was held on April 24, 2024.
| Further, the State Election Commission (SEC) issued a re-vote
| for parliament in seven polling stations in the municipalities
| of Dolneni, Krushevo, Struga, Ohrid (fifth district), and
| Zhelino (sixth district). The re-vote occurred on May 22, 2024.

F1010_1 >>> DATE 1ST ROUND ELECTION BEGAN - YYYY-MM-DD

|
 | F1011_1 details the start date of the second round of the
 | election in the format YYYY-MM-DD, if applicable.
 |
 | Users are advised to consult ELECTION STUDY NOTES for variables
 | F1011_M-F1011_Y.

 F1011_2 >>> DATE 2ND ROUND ELECTION BEGAN - YYYYMM

Date [second round] election began.

.....
 999996. NOT APPLICABLE: NO SECOND ROUND

| VARIABLE NOTES: F1011_2
 |
 | POTENTIAL TIME BRIDGING IDENTIFIER
 |
 | F1011_2 details the start date of the second round of the
 | election in the format YYYYMM, if applicable.
 |
 | Users are advised to consult ELECTION STUDY NOTES for variables
 | F1011_M-F1011_Y.

 F1012_1 >>> STUDY TIMING

Timing of study relative to election.

-
1. POST-ELECTION STUDY
 2. PRE-ELECTION AND POST-ELECTION STUDY
 3. BETWEEN ROUNDS

| VARIABLE NOTES: F1012_1
 |
 | F1012_1 details whether the CSES MODULE 6 was included in a post-
 | election study or was fielded in a study operating a pre- and
 | post-election design.
 | Conventionally, the CSES questionnaire is only included in post-
 | election surveys. However, a small number of studies fielded a
 | limited number of questions before the election in cases where
 | respondents were interviewed before and after the election.
 |
 | Wherever possible, variables collected post-election were
 | selected for CSES MODULE 6. For variables administered prior to
 | the election, there is a reference in the ELECTION STUDY NOTES,

| alerting users to the deviance. Hence, before conducting their
 | analyses, we advise researchers to read ELECTION STUDY NOTES
 | carefully for all variables of their interest.

 F1012_2 >>> STUDY TIMING WITH RESPECT TO COVID-19 PANDEMIC

Timing of election/study relative to COVID-19 pandemic.

-
- 0. ELECTION/STUDY CONDUCTED ENTIRELY AFTER COVID-19 PANDEMIC
 - 1. ELECTION/STUDY CONDUCTED DURING & AFTER COVID-19 PANDEMIC
 - 2. ELECTION/STUDY CONDUCTED ENTIRELY DURING COVID-19 PANDEMIC

| VARIABLE NOTES: F1012_2

| A pandemic is an epidemic of infectious disease that has spread
 | across a large region or multiple or worldwide and affecting a
 | substantial number of individuals.

| At the time of writing, COVID-19 was first discovered in November
 | 2019. Prior to the onset of CSES MODULE 6, the World Health
 | Organization classified COVID-19 as a pandemic on March 11, 2020.
 | On May 5, 2023, the WHO assessed that given the disease was by
 | now well established and ongoing, it no longer fit the definition
 | of a Public Health Emergency of International Concern (PHEIC) and
 | hence the state of a global emergency.

| An election (or election study) in CSES MODULE 6 is classified
 | as taking place during the COVID-19 pandemic if the election
 | itself took place and/or the entire study fieldwork was
 | administered before May 5, 2023, the end date of the WHO PHEIC
 | classification.

| An election (or election study) is classified as taking place
 | entirely after the COVID-19 pandemic if the election was held and
 | the election study fieldwork was completed after May 5, 2023.
 | An election which took place before May 5, 2023 but in which
 | the fieldwork took place both before and/or after May 5, 2023
 | is classified as an election taking place both after and during
 | the COVID-19 pandemic.

| Source of data: World Health Organization (WHO)
 | <https://www.who.int/europe/emergencies/situations/covid-19>
 | (Date accessed: April 03, 2024).

| ELECTION STUDY NOTES - MONTENEGRO (2023): F1012_2

| For the Montenegrin 2023 study, both the legislative main
 | election, held on June 11, 2023, and fieldwork, conducted
 | between October 14 and 30, 2023, occurred entirely after the
 | COVID-19 pandemic. However, as the study also includes

| respondents' vote choice for the 2023 Presidential elections
 | held on March 19 and April 2, 2023, Montenegro 2023 is
 | classified as "1. ELECTION/STUDY CONDUCTED AFTER & DURING
 | COVID-19 PANDEMIC".

 F1013 >>> STUDY CONTEXT

Study context in which CSES module was administered.

1. CSES CONDUCTED AS PART OF A LARGER STUDY
2. CSES CONDUCTED AS STAND-ALONE STUDY
9. MISSING

| VARIABLE NOTES: F1013

| F1013 details the circumstances in which CSES was administered
 | in a polity.
 | Oftentimes, CSES is included as one component of a more extensive
 | election study or study of political behavior (for example the
 | American National Election Study ANES, or the German Longitudinal
 | Election Study GLES). However, some studies administered CSES
 | separately from a larger study.

 F1014 >>> ELECTION TYPE

Type of election.

10. PARLIAMENTARY/LEGISLATIVE
12. PARLIAMENTARY/LEGISLATIVE AND PRESIDENTIAL
13. PARLIAMENTARY/LEGISLATIVE AND PRIME MINISTER
20. PRESIDENTIAL
30. HEAD OF GOVERNMENT

| VARIABLE NOTES: F1014

| The following table gives an overview of which type of elections
 | are included in CSES MODULE 6 for which polity.

| +++ TABLE: ELECTION STUDIES BY TYPE OF ELECTION

	Presidential	Lower House	Upper House
POLITY (ELEC YEAR)	Election	Election	Election

AUSTRALIA (2022)	-	X	X
AUSTRIA (2024)	-	X	-
BRAZIL (2022)	X	X	X
DENMARK (2022)	-	X	-
FRANCE (2022)	X	-	-
MONTENEGRO (2023)	X	X	-
NEW ZEALAND (2023)	-	X	-
NORTH MACEDONIA (2024)	X	X	-
POLAND (2023)	-	X	X
PORTUGAL (2022)	-	X	-
PORTUGAL (2024)	-	X	-
SLOVAKIA (2023)	-	X	-
SLOVENIA (2022)	-	X	-
SWEDEN (2022)	-	X	-
SWITZERLAND (2023)	-	X	X
TAIWAN (2024)	X	X	-
TURKIYE (2023)	X	X	-
UNITED STATES (2024)	X	X	X

| -----
| KEY: X = yes; - = no.

| ELECTION STUDY NOTES - MONTENEGRO (2023): F1014

| Conventionally, Montenegrin election studies cover legislative
| elections, the country's main election. However, due to the
| proximity to the legislative elections held on June 11, 2023,
| the Montenegrin 2023 study also includes vote choice items for
| the Presidential elections held on March 19 and April 2 the same
| year. Hence, Montenegro 2023 is classified as "12. PARLIAMENTARY/
| LEGISLATIVE AND PRESIDENTIAL" in F1014.

F1015_1 >>> MODE OF INTERVIEW - STUDY - FIRST
F1015_2 >>> MODE OF INTERVIEW - STUDY - SECOND
F1015_3 >>> MODE OF INTERVIEW - STUDY - THIRD

Mode(s) of interview used in study.

.....

0. NOT APPLICABLE

1. IN PERSON, FACE-TO-FACE
2. TELEPHONE
3. MAIL OR SELF-COMPLETION SUPPLEMENT
4. INTERNET
5. IN PERSON, USING VIDEO CALL

9. MISSING

| VARIABLE NOTES: F1015_
|

F1015_ detail the mode(s) of interview administered in a study on the study-level. For mixed-mode studies, the different modes used are classified in F1015_1-F1015_3 in no particular order.

Further details on the overall sampling design, including the mode(s) of interview used, are provided in the "Overview of Study Design and Weights" available for each election study in Part 5 of the CSES MODULE 6 Codebook.

Additionally, users may consult the Design Reports for even more comprehensive information. Design Reports for each polity included in CSES are available on the CSES MODULE 6 Study Page at <https://cses.org/data-download/cses-module-6-2021-2026/>.

Some practitioners may be familiar with other terminology for different modes of interview. Below, we outline how some alternative terms map to the classifications used by CSES:

- Face-to-face in-person interviews using a questionnaire on paper are sometimes referenced as paper-and-pencil interviews (PAPI).
- Face-to-face in-person interviews using an electronic or computerized questionnaire are also known as computer-assisted personal interviews (CAPI). Sometimes, such interviews may include self-administered components - for e.g. for questions deemed sensitive. Self-administered parts interviewers give to respondents as part of a face-to-face protocol are also known as computer-assisted self-interviewing (CASI).
- Telephone interviews are sometimes labeled computer-assisted telephone interviews (CATI).
- Internet surveys are sometimes also referred to as computer-assisted web interviews (CAWI) or computerized self-administered questionnaire (CSAQ).

ELECTION STUDY NOTES - UNITED STATES (2024): F1015_1-3

The United States (2024) study used four different modes of interview, namely, internet, face-to-face, telephone, and video. CSES codes the three most used ones in variables F1015_1-3.

```
-----
F1016_1    >>> MODE OF INTERVIEW - RESPONDENT - FIRST
F1016_2    >>> MODE OF INTERVIEW - RESPONDENT - SECOND
F1016_3    >>> MODE OF INTERVIEW - RESPONDENT - THIRD
-----
```

Mode(s) of interview used by respondent.

.....

0. NOT APPLICABLE

1. IN PERSON, FACE-TO-FACE
2. TELEPHONE
3. MAIL OR SELF-COMPLETION SUPPLEMENT
4. INTERNET

5. IN PERSON, USING VIDEO CALL

9. MISSING

| VARIABLE NOTES: F1016_

| F1016_ detail the mode(s) of interview administered in a study on the respondent-level. For mixed-mode studies, the different modes used are classified in F1016_1-F1016_3 in no particular order.

| Further details on the overall sampling design, including the mode(s) of interview used, are provided in the "Overview of Study Design and Weights" available for each election study in Part 5 of the CSES MODULE 6 Codebook.

| Additionally, users may consult the Design Reports for even more comprehensive information. Design Reports for each polity included in CSES are available on the CSES MODULE 6 Study Page at <https://cses.org/data-download/cses-module-6-2021-2026/>.

| For alternative terminology referencing to modes sometimes used among practitioners, see VARIABLE NOTES for variables F1015_ (Mode of Interview - Study).

| Data for F1016_1 are unavailable for DENMARK (2022).

| ELECTION STUDY NOTES - DENMARK (2022): F1016_1

| F1016_1 is coded missing for DENMARK (2022). Although the vast majority of respondents completed the questionnaire online, some respondents who could not be reached via the electronic mail services or did not respond to the survey invitation were offered to complete a paper-based mail-back questionnaire. As there is no variable available to differentiate between modes of interview at the respondent level, F1016_1 is unavailable for Denmark.

----- F1017 >>> SELF-SELECTION INTO MODE OF INTERVIEW -----

Whether respondent self-selected or was assigned to interview mode.

0. NOT APPLICABLE

1. RESPONDENTS SELF-SELECTED INTO MODE

2. RESPONDENTS WERE ASSIGNED TO MODE, NO SELF-SELECTION

9. MISSING

| VARIABLE NOTES: F1017

=====

F1017 distinguishes between studies where respondents were assigned to the study mode and those studies where different characteristics of respondents led to de-facto self-selection into a survey mode. The variable operates on the study level and is only applicable to mixed-mode studies.

Further details on the overall sampling design, including the mode(s) of interview used, are provided in the "Overview of Study Design and Weights" available for each election study in Part 5 of the CSES MODULE 6 Codebook.

ELECTION STUDY NOTES - SLOVENIA (2022): F1017

The Slovenian election study employed a mixed-mode approach with interviews collected via the internet and telephone interview. All selected respondents were first invited to complete the survey via the internet. If they volunteered, they were called via phone to complete the interview that way.

ELECTION STUDY NOTES - SWITZERLAND (2023): F1017

The Swiss election study employed a mixed-mode approach with interviews collected via the internet and mail-back self-completion. All selected respondents were first invited to complete the survey via the internet. With the second reminder (out of three), a paper version of the questionnaire was sent to those who had not yet participated in the survey. Hence, all respondents who completed the survey after the reception of the second reminder self-selected into the mode of interview.

F1018_1 >>> DURATION OF FIELDWORK

Duration of fieldwork.

.....

001-900. NUMBER OF DAYS

999. MISSING

VARIABLE NOTES: F1018_1

F1018_1 details the number of days in total for the fieldwork including the end day in the calculation. F1018_1 may either refer to the fieldwork dates as specified in variables F1019_, or to the fielding period for the entire respective national election study as provided in the corresponding election study's Design Report - available from the CSES MODULE 6 study page at: <https://cses.org/data-download/cses-module-6-2021-2026/>

| ELECTION STUDY NOTES - UNITED STATES (2024): F1018_1

| The variable is coded only for the post-election component of the
 | American National Election Study (ANES), ranging from November 7,
 | 2024 to February 17, 2025. The ANES also included a pre-election
 | component running from August 3, 2024 to November 5, 2024.

 F1018_2 >>> DAYS FIELDWORK STARTED POST ELECTION

Number of days after the election fieldwork started.

.....
 001.-900. NUMBER OF DAYS

999. MISSING

| VARIABLE NOTES: F1018_2

| F1018_2 details the number of days after the election the
 | fieldwork commences. If the election was held on more than one
 | day or involved multiple rounds, this variable reports the number
 | of days from the first day of the election and/or the first
 | round.

| F1018_2 may either refer to the beginning of fieldwork as
 | specified in variables F1019_, or to the fielding period for the
 | entire respective national election study as provided in the
 | corresponding election study's Design Report - available from the
 | CSES MODULE 6 study page at:

| <https://cses.org/data-download/cses-module-6-2021-2026/>

99. MISSING

YEAR

2021-2026. YEAR

9999. MISSING

VARIABLE NOTES: F1019_

F1019_ detail the date the questionnaire was administered, i.e., the date of interview. In some instances, the fieldwork dates listed in the Design Report and within the CSES MODULE 6 dataset as reported in F1019_ may differ. This arises principally because CSES MODULE 6 reports the fieldwork dates relative to the fielding of the CSES component of the study and concerning the relevant observations from an election study included in CSES MODULE 6. However, the Design Report can refer to fieldwork dates for non-CSES components of a study. Wherever possible, the table below reports fieldwork dates as provided in variables F1019_. In cases where data for either F1019_M, F1019_D or F1019_Y are unavailable, CSES sourced fieldwork dates from the corresponding election study's Design Report - available from the CSES MODULE 6 study page at: <https://cses.org/data-download/cses-module-6-2021-2026/>

+++ TABLE: DATES OF FIELDWORK BY POLITY

| -----
 | Data are unavailable for FRANCE (2022).

| ELECTION STUDY NOTES - DENMARK (2022): F1019_

| For the Danish 2022 study, F1019_ refers to the start date of the
 | interview. Collaborators note that respondents were allowed to
 | interrupt the online interview and complete it at a later date.
 | The latest interview included in the CSES sample was started on
 | January 29 as documented in F1019_D, but completed on February 1,
 | 2023.

| ELECTION STUDY NOTES - MONTENEGRO (2023): F1019_

| Fieldwork for the Montenegrin 2023 study was conducted between
 | October 14 and October 30, 2023. For 39 interviews in the sample,
 | dates outside of this range were erroneously documented by the
 | fieldwork management software, meaning the actual date of
 | interview is not ascertainable. The 39 affected observations
 | were coded to "99. MISSING" in F1019_M and F1019_D.

| ELECTION STUDY NOTES - NORTH MACEDONIA (2024): F1019_M & F1019_D

| Collaborators advise that the date of the interview cannot be
 | ascertained for 18 observations in the dataset. For these cases,
 | interviewers' tablets were affected by a sync issue, which
 | caused interviews presumably conducted in the second half of
 | November to appear as if they were all completed on December 1,
 | 2024. The affected 18 respondents were coded to "99. MISSING" in
 | F1019_M and F1019_D and to "9995. NOT ASCERTAINABLE" in F1020_1,
 | respectively.

| ELECTION STUDY NOTES - SWEDEN (2022): F1019_

| Collaborators advise that variables F1019_ indicate the day they
 | received the completed questionnaire, which does not necessarily
 | equal the day the questionnaire was administered.
 | While the response day presumably equals the day of reception
 | for respondents filling in the questionnaire online, dates may
 | diverge for up to one week for respondents answering the
 | mail-back questionnaire.
 | Further, collaborators note fieldwork was envisaged to start on
 | September 12, 2022 - the day following the general election.
 | However, since collaborators had no means to verify whether
 | questionnaires reached respondents in time, and the first online

| interview was conducted on September 13, 2022, CSES classifies
 | September 13, 2022, as the start date of the fieldwork period.

| ELECTION STUDY NOTES - TAIWAN (2024): F1019_

| One respondent is classified as having been interviewed on June
 | 1, 2024, although the interviewing period ended the preceding
 | day (May 31). Collaborators note the respective interview
 | started around 11 p.m. on May 31, finishing only after midnight.
 | As a result, the fieldwork management software classified
 | June 1, 2024, as the date of the interview. Data in F1019_
 | remain unchanged.

| ELECTION STUDY NOTES - UNITED STATES (2024): F1019_M - F1019_Y

| The survey was administered between November 7, 2024, and
 | February 17, 2025. For demographic variables as well as for
 | respondents who had voted early, the CSES includes questions of
 | the pre-election questionnaire, administered between August 3
 | and November 5, 2024.

 F1020_1 >>> DAYS INTERVIEW CONDUCTED POST FIRST ROUND OF ELECTION

Number of days after the election interview conducted.

.....

001.-900. NUMBER OF DAYS

9995. NOT ASCERTAINED

9999. MISSING

| VARIABLE NOTES: F1020_1

| F1020_1 details the number of days the interview was conducted
 | after the first day of the election and/or the first round.

| For studies where the election involved multiple rounds, the
 | number of days the interview was conducted post the second round
 | is available in F1020_2.

| Data are unavailable for FRANCE (2022).

| ELECTION STUDY NOTES - NORTH MACEDONIA (2024): F1020_1

| Collaborators advise that the date of the interview cannot be
 | ascertained for 18 observations in the dataset. For these cases,
 | interviewers' tablets were affected by a sync issue, which
 | caused interviews presumably conducted in the second half of
 | November to appear as if they were all completed on December 1,
 | 2024. The affected 18 respondents were coded to "99. MISSING" in

| F1019_M and F1019_D and to "9995. NOT ASCERTAINABLE" in F1020_1,
 | respectively.

 F1020_2 >>> DAYS INTERVIEW CONDUCTED POST SECOND ROUND OF ELECTION

Number of days after the election interview conducted.

001.-900. NUMBER OF DAYS

9995. NOT ASCERTAINED
 9996. NOT APPLICABLE: NO SECOND ROUND
 9999. MISSING

| VARIABLE NOTES: F1020_2

| F1020_2 details the number of days from the first day of the
 | election of the second round for studies where the election
 | featured more than one round.

| Data are unavailable for FRANCE (2022).

 F1021 >>> DURATION OF INTERVIEW

Duration of interview.

001-500. NUMBER OF MINUTES

99999. MISSING

| VARIABLE NOTES: F1021

| F1021 details the length of the interview in minutes.

| For a small number of cases, the duration of interview exceeds
 | the limit as specified in the codes provided above.

| When probed, Collaborators report a range of potential reasons
 | for interview duration deviations including the following
 | technical issues:

- | - interviewers forgetting to exit the application used for data
 | collection upon completion of the interview
- | - respondents interrupting online interviews without closing the
 | associated application in their web browser, completing
 | the interview at a later time or day.
- | - other technical issues during the survey administration not

| further specified.

| Data is mostly unavailable for studies that relied solely on self-completion mail-back studies or respondents that completed the survey using this mode; although in some instances, self-estimates by the respondent are provided and are listed in the below ELECTION STUDY NOTES where appropriate.

| Data are unavailable for AUSTRALIA (2022), FRANCE (2022), NEW ZEALAND (2023), POLAND (2023), SWEDEN (2022), and TURKIYE (2023).

| ELECTION STUDY NOTES - AUSTRIA (2024): F1021

| A tabulation of F1021 shows some Austrian respondents with unusually high values for this variable. These are presumably those respondents who did not fill in the online questionnaire in one go but took breaks when responding to the questions or resumed the questionnaire after a few days/weeks.

| ELECTION STUDY NOTES - DENMARK (2022): F1021

| 175 respondents were coded "99999. Missing" in F1021 because they interrupted the interview and finished it at a later date, making the calculation of interview duration infeasible.

| ELECTION STUDY NOTES - SWITZERLAND (2023): F1021

| A tabulation of F1021 shows some Swiss respondents with unusually high values for this variable. These are presumably those respondents who did not fill in the online questionnaire in one go but took breaks when responding to the questions or resumed the questionnaire after a few days/weeks, often following a reminder. Reminders were sent out on November 03, November 16 and December 05, 2023.

 F1022_1 >>> INTERVIEWER ID WITHIN ELECTION STUDY

A02. Interviewer identification variable, within election study.

00000-999996. INTERVIEWER IDENTIFIER

999997. NOT APPLICABLE: SELF-ADMINISTERED QUESTIONNAIRE

999999. MISSING

| VARIABLE NOTES: F1022_1

| F1022_1 details a unique identifier for an interviewer within an election study. It is not unique across the entire CSES MODULE 6.

=====

|
| Data are unavailable for AUSTRALIA (2022).

| ELECTION STUDY NOTES - AUSTRALIA (2022): F1022_1

| The tabulation of F1022_1 for Australia (2022) shows that 3,158
| respondents are coded as "999997. NOT APPLICABLE" and 111
| respondents are coded as "999999. MISSING". In the 2022
| Australian Election Study, a mixed-mode design was used
| (F1016_1). While 3,158 respondents completed the survey via the
| internet, 111 respondents did so via telephone. Therefore, these
| 3,158 respondents were coded as not applicable for F1022_1, while
| 111 respondents were coded as missing as no information was
| available on the telephone interviewers.

| ELECTION STUDY NOTES - PORTUGAL (2024): F1022_1

| For the Portuguese 2024 studies, the original interviewer IDs
| were eight digits in length. The first four digits referred to
| the office to which interviewers reported (Lisbon or Porto),
| with the remaining four digits identifying interviewers. As the
| first four digits were not required to unambiguously refer to
| interviewers, F1022_1 just reports the last four digits of the
| original variable (37 interviewers in total).

| ELECTION STUDY NOTES - UNITED STATES (2024): F1022_1

| The deposited dataset contained an interviewer ID variable in
| string format. Specifically, each interviewer ID started with
| "DC", followed by a four-digit number.
| For the CSES MODULE 6 dataset, only the digits from the original
| interviewer IDs were kept. Furthermore, in case the four-digit
| code started with a zero, the zero was dropped.
| Recoding was realized in STATA 19 using the following commands:

```
| gen F1022a = V245010
| replace F1022a = "999999" if V245010 == "-1. Inapplicable"
| replace F1022a = substr(V245010, 3, 4) ///
| if V245010 != "-1. Inapplicable"
| gen F1022_1 = real(F1022a)
| drop F1022a
```

F1022_2 >>> INTERVIEWER GENDER

A03. Gender of interviewer.

.....

- 0. MALE
- 1. FEMALE
- 3. ALTERNATIVE RESPONSE [SEE ELECTION STUDY NOTES]

7. NOT APPLICABLE: SELF-ADMINISTERED QUESTIONNAIRE

9. MISSING

| VARIABLE NOTES: F1022_2

| F1022_2 details the interviewer's gender for non-self-administered studies in CSES MODULE 6.

| Data are unavailable for AUSTRALIA (2022) and POLAND (2023).

| ELECTION STUDY NOTES - AUSTRALIA (2022): F1022_2

| The tabulation of F1022_2 for Australia (2022) shows that 3,158 respondents are coded as "7. NOT APPLICABLE" and 111 respondents are coded as "9. MISSING". In the 2022 Australian Election Study, a mixed-mode design was used (F1016_1). While 3,158 respondents completed the survey via the internet, 111 respondents did so via telephone. Therefore, these 3,158 respondents were coded as not applicable for F1022_2, while 111 respondents were coded as missing as no information was available on the gender of the telephone interviewers.

 F1023 >>> LANGUAGE OF QUESTIONNAIRE ADMINISTRATION

A06. Language of questionnaire administration.

008. ARABIC, LEVANTINE (ISRAEL)

016. BENGALI, BANGLADESHI, BANGLA (INDIA)

999. MISSING
  
```

| VARIABLE NOTES: F1023
|
| F1023 details the language the interview was administered in.
| Coding of F1023 follows the scheme of F2017 (language usually
| spoken at home).
|
| Data are unavailable for NEW ZEALAND (2023).

| ELECTION STUDY NOTES - NORTH MACEDONIA (2024): F1023
|
| For the North Macedonian 2024 study, interviews were conducted
| in Macedonian and in Albanian.
| The CSES classification for F1023 distinguishes between multiple
| Albanian dialects. Collaborators advise the predominant dialect
| spoken in North Macedonia is Gheg. However, official, state-
| sponsored education is based on Standard Albanian (Tosk).
| Therefore, collaborators used the general term "Albanian"
| commonly employed by North Macedonian surveys with respondents,
| as asking respondents to specify a dialect would have likely
| been confusing and challenging for them to answer.

CSES Code	Election Study Code/Category
980.	Albanian (not further specified)

| ELECTION STUDY NOTES - TAIWAN (2024): F1023

981.	Taiwanese and Hakka

| ELECTION STUDY NOTES - UNITED STATES (2024): F1023

Some respondents in the United States 2024 study switched languages between the pre- and the post-election survey from either English to Spanish or vice versa. These respondents were coded 980 in F1023.	
CSES Code	Election Study Code/Category
980.	Language of questionnaire administration switched between pre- and post-election interview

F1024 >>> QUESTIONNAIRE VERSION

Version of the CSES MODULE 6 questionnaire that was fielded.
.....

1. PILOT QUESTIONNAIRE
2. FINALIZED QUESTIONNAIRE

| VARIABLE NOTES: F1024

| F1024 details whether studies administered the pilot version or
 | the finalized version of the CSES MODULE 6 questionnaire.

| Studies included in the CSES MODULE 6 fielded one of two
 | versions of the CSES questionnaire. The pilot questionnaire
 | was fielded among pre-test studies and in cases where national
 | election studies were administered prior to the finalization of
 | the CSES MODULE 6 questionnaire in 2022. All other studies
 | fielded the finalized version.

 F1100 >>> ID COMPONENT - SAMPLE COMPONENT

Sample Components within an election study.

01.-03. [SEE ELECTION STUDY NOTES]

999. MISSING

| VARIABLE NOTES: F1100

| F1100 details the number of sampling components included in a
 | study, i.e., differentiation in administering a survey in terms
 | of language, pre- and post-election designs, oversampling of
 | selected sub-populations, etc.
 | In some cases, analysts may wish to consider regions of politics
 | or other sample components units of analysis (e.g., what form of
 | questionnaire was administered to a respondent or timing of
 | administration). This variable provides this information. If
 | applicable, ELECTION STUDY NOTES BELOW detail the individual
 | sampling components. For studies that do not provide multiple
 | sample components, the default value is 1.

| ELECTION STUDY NOTES - FRANCE (2022): F1100

F1101_1 >>> ORIGINAL WEIGHT: SAMPLE
F1101_2 >>> ORIGINAL WEIGHT: DEMOGRAPHIC
F1101_3 >>> ORIGINAL WEIGHT: POLITICAL

Original Weights provided by the national election study.

| VARIABLE NOTES: F1101_

| F1101_ detail the original weights provided by each election
| study in CSES MODULE 6.

| Sample weights include those intended to correct for unequal
| selection probabilities resulting from "booster" samples,
| procedures for selection within the household, non-response,
| as well as other features of the sample design.

| Demographic weights adjust sample distributions of socio-
| demographic characteristics to more closely resemble the
| characteristics of the population.

| Political weights reconcile discrepancies in the reported
| electoral behavior of the survey respondents from the official
| vote counts.

| For some studies providing a political weight, political weights
| are unavailable for non-voters or respondents casting an invalid
| vote. In past CSES Modules, such observations have oftentimes
| been set to zero, thereby dropping from analyses upon applying
| the political weight. However, CSES acknowledges that political
| weights have gotten more complex over time, sometimes accounting
| for additional factors apart from current election results.

| Consequentially, for CSES MODULE 6, the handling of missing
| values in political weights will be decided on a case-by-case
| basis, in close coordination with the respective Collaborators.

| Where applicable, further details on such instances are provided

| in the ELECTION STUDY NOTES below.

| In cases where a Collaborator provides a single weight that is a combination of one or more of the three weight categories (sample, demographic, and political), the weight is duplicated in the two or more appropriate variables. Thus, analysts using two or more of the weights simultaneously will need to account for this duplication.

| Use of weights is at the discretion of the analyst based upon the considerations of her/his individual research question. We recommend that analysts familiarize themselves with the weights, their components, and their methods of creation before applying them.

| Additionally, analysts will want to keep in mind that these weights are prepared to be election study weights, not country weights. To convert the weights to country weights requires an adjustment for those countries for which one or more polities or election studies appear in the dataset.

| Where a weight of a particular type is unavailable, these variables are coded 1.

| Collaborators provided the original weights with a varying number of decimal places. In this CSES dataset, however, all of the original weights have been rounded to four decimal places at maximum (i.e. 1.1234) using STATA.

| Further details on the overall sampling design, including the weights deposited with CSES, are provided in the "Overview of Study Design and Weights" available for each election study in Part 5 of the CSES MODULE 6 Codebook.

| Additionally, users may consult the Design Reports for even more comprehensive information. Design Reports for each polity included in CSES are available on the CSES MODULE 6 Study Page at <https://cses.org/data-download/cses-module-6-2021-2026/>.

| In some instances, original weights as deposited with CSES included missing values or observations coded as zero. ELECTION STUDY NOTES for F1100_ detail how the affected cases were handled in the CSES MODULE 6 dataset.

| +++ TABLE: TYPE OF ORIGINAL WEIGHTS BY INDIVIDUAL ELECTION STUDIES

POLITY (ELEC YEAR)	Sample Weight	Demographic Weight	Political Weight
-----	-----	-----	-----
AUSTRALIA (2022)	X	-	-
AUSTRIA (2024)	-	X	X
BRAZIL (2022)	-	X	-
DENMARK (2022)	-	X	X

UNITED STATES (2024)	X	X	-

| -----
| KEY: X = available; - = not available.

| Weights are unavailable for FRANCE (2022).

| ELECTION STUDY NOTES - AUSTRALIA (2022): F1101_1

| Whereas all non-citizens (287 respondents from overall 3,556
| respondents) were dropped from the dataset for CSES Module 6, the
| weight calculation included these non-citizens. The explanation
| from the collaborators is that when they started their work on
| the file, they asked their statistician who devised the weights
| about this issue. His view was that they should leave the already
| calculated weight and a new weight was not necessary. The already
| supplied weight is adequate.

| ELECTION STUDY NOTES - NORTH MACEDONIA (2024): F1101_3

| For 452 respondents, a political weight was not calculated
| because they either did not vote according to F3010_LH (N = 433)
| or cast an invalid ballot according to F3011_LH_PL (N = 19).
| As suggested by collaborators, the respective 452 respondents
| were coded to 1 for the political weight, i.e., the mean of
| F1101_3.

| ELECTION STUDY NOTES - SWEDEN (2022): F1101_2

| For 16 respondents in F1101_2, no weight value was provided
| because the education variable used for calculating the weights
| was missing. The 16 observations in F1101_2 were assigned the
| mean value of the provided demographic weight.

F1102_1 >>> FACTOR: MEAN OF SAMPLE WEIGHT
F1102_2 >>> FACTOR: MEAN OF DEMOGRAPHIC WEIGHT
F1102_3 >>> FACTOR: MEAN OF POLITICAL WEIGHT

Mean Weight of Weights provided by the national election study.

.....

=====

| VARIABLE NOTES: F1102_

| F1102_ detail the mean weight of each type, within each polity (election study). The resulting factors are then used to create the derivative "Polity Weights" in variables F1103_1 through F1103_3.

| To follow is the STATA code used to create variables F1102_1, F1102_2, and F1102_3:

```
| levelsof F1004, local(elec) sep(" ")
|
| forvalues i=1/3 {
|   foreach x of local elec {
|     su F1101_`i' if F1004=="`x'"
|     replace F1102_`i' = r(mean) if F1004=="`x'"
|   }
| }
```

| The STATA code to create the derivative variables in the CSES dataset was run on the original, unrounded version of the original weight variables (F1101_1-F1101_3). Thereafter the derivative variables were rounded to four decimal places at maximum (i.e. 1.1234) using STATA.

| It is due to this rounding that the mean values of derivative weight variables F1102_1-F1102_3 for individual election studies and for the full dataset are close to, but not necessarily exactly equal to, 1.0000.

```
-----
F1103_1    >>> POLITY WEIGHT: SAMPLE
F1103_2    >>> POLITY WEIGHT: DEMOGRAPHIC
F1103_3    >>> POLITY WEIGHT: POLITICAL
-----
```

Polity Weight of Weights provided by the national election study.

| VARIABLE NOTES: F1103_

| See also Variable and Election Study VARIABLE NOTES for F1101_-F1102_.

| F1103_ detail the standardized versions (with a mean 1 within the polity) of the original weights provided with the component election studies, described in F1101_. They are the ratio of each weighting factor to the mean weight (F1102_) of each type, calculated within each polity.

| The derivative "Polity Weight" (F1103_) has been created so that for each weight (sample, demographic, political), each respondent within the election study has a mean weight of "1".

| If you are running a frequency, for instance, this weight
| will work so that the N in your frequency table comes out to
| approximately the same as the number of interviews in the
| study. This derivative weight is created by dividing the
| individual weight for each respondent within an election
| study by the mean for that weight for all respondents in that
| election study.

| To follow is the STATA code used to create variables
| F1103_1, F1103_2, and F1103_3:

```
| replace F1103_1 = F1101_1 / F1102_1
| replace F1103_2 = F1101_2 / F1102_2
| replace F1103_3 = F1101_3 / F1102_3
```

| The STATA code to create the derivative variables in the CSES
| dataset was run on the original, unrounded version of the
| original weight variables (F1101_1-F1101_3). Thereafter the
| derivative variables were rounded to four decimal places at
| maximum (i.e. 1.1234) using STATA.

| It is due to this rounding that the mean values of derivative
| weight variables F1103_1-F1103_3 for individual election studies
| and for the full dataset are close to, but not necessarily
| exactly equal to, 1.0000.

F1104 >>> FACTOR: SAMPLE SIZE ADJUSTMENT

Factor Weight of Weights provided by the national election study.
.....

| VARIABLE NOTES: F1104

| F1104 details the ratio of the average sample size to each
| election study sample. This factor is calculated on the basis of
| the samples appearing in the CSES data files (i.e. does not
| incorporate booster samples, panel respondents who did not
| participate in the CSES wave of multi-wave studies, etc.).
| Further, this factor treats elections, and not political systems,
| as the unit of analysis. Analysts wishing to compare across-
| countries, instead of across-election studies, should adjust this
| weight accordingly.

| The resulting factor is then used to create the derivative
| "Dataset Weights" in variables F1105_1 through F1105_3.

| This variable will not be available until the Full Release of
| CSES MODULE 6.

| To follow is the STATA code used to create variable F1104:

```

| gen n=1
| gen tot_obs = _N                                /*Number of observations*/
| tab F1004, m
| gen estudies = r(r)                             /*Number of election studies*/
| gen mean_res = tot_obs/estudies
| gen n_cases = .
|
| levelsof F1004, local(elec) sep(" ")
|
| foreach x of local elec {
|     su n if F1004=="`x'"
|     replace n_cases = r(sum) if F1004=="`x'"
| }
|
| replace F1104 = mean_res / n_cases
| drop n-n_cases
|
| The STATA code to create the derivative variables in the CSES
| dataset was run on the original, unrounded version of the
| original weight variables (F1101_1-F1101_3). Thereafter the
| derivative variables were rounded to four decimal places at
| maximum (i.e. 1.1234) using STATA.
|
| It is due to this rounding that the mean value of derivative
| weight variable F1104 for the full dataset is close to, but not
| necessarily exactly equal to, 1.0000.

```

```

-----
F1105_1    >>> DATASET WEIGHT: SAMPLE
F1105_2    >>> DATASET WEIGHT: DEMOGRAPHIC
F1105_3    >>> DATASET WEIGHT: POLITICAL
-----

```

Dataset Weight of Weights provided by the national election study.

```

| VARIABLE NOTES: F1105_
|
| See also Variable and Election Study VARIABLE NOTES for F1101_-
| F1104.
|
| F1105_ are intended for micro-level analyses involving the
| entire CSES sample. Using the sample size adjustment (F1104),
| the centered weights (F1103_) are corrected such that each
| each election study component contributes equally to the
| analysis, regardless of the original sample size. Users are
| advised to read the VARIABLE NOTES of the preceding variables
| carefully so as to ensure that their analyses will be weighted
| appropriately.
|
| The derivative "Dataset Weight" (F1105_) has been created so
| that each election study in the dataset will contribute equally
| to analyses of respondents, regardless of the number of

```

| interviews in each election study.

| This variable will not be available until the Full Release of CSES MODULE 6.

| To follow is the STATA code used to create variables F1105_1, F1105_2, and F1105_3:

```
| replace F1105_1 = F1103_1 * F1104
| replace F1105_2 = F1103_2 * F1104
| replace F1105_3 = F1103_3 * F1104
```

| The STATA code to create the derivative variables in the CSES dataset was run on the original, unrounded version of the original weight variables (F1101_1-F1101_3). Thereafter the derivative variables were rounded to four decimal places at maximum (i.e. 1.1234) using STATA.

| It is due to this rounding that the mean values of derivative weight variables F1105_1-F1105_3 for the full dataset are close to, but not necessarily exactly equal to, 1.0000.

 F1106 >>> CSES MODULE 6 RELEASE CYCLE

CSES MODULE 6 Release an election study was first published in.

-

 3. STUDY ADDED IN CSES MODULE 6 ADVANCE RELEASE 3
 4. STUDY ADDED IN CSES MODULE 6 ADVANCE RELEASE 4
 5. STUDY ADDED IN CSES MODULE 6 FULL RELEASE

| VARIABLE NOTES: F1106

| F1106 details the CSES MODULE 6 release a national election study was published in. For example, a study coded 1 in F1106 was added to Module 6 Advance Release 1, whereas a study coded 2 in F1106 became available in Module 6 Advance Release 2, and so on.

=====

))) CSES MODULE 6 VARIABLES: MICRO-LEVEL (SURVEY) DATA
 DEMOGRAPHIC DATA

=====

| Users should note that the CSES questionnaire of origin does not include any filter instructions in the demographic section.

|

| The use of filter instructions/variables in the demographic
| section follows primary researchers' applications. Where they
| appear, an election study note will inform on their use and
| function.
|
| For several variables, instructions for the administration of
| the CSES Questionnaire were given. See >>> CSES MODULE 6
| COLLABORATOR INSTRUCTIONS FOR THE ADMINISTRATION OF THE
| CSES QUESTIONNAIRE, in Part 1 of the Codebook.

F2001_Y >>> DATE OF BIRTH OF RESPONDENT - YEAR

D01.b. Date of birth of respondent.
.....

1900-2006. YEAR

9997. VOLUNTEERED: REFUSED

9998. VOLUNTEERED: DON'T KNOW

9999. MISSING

| VARIABLE NOTES: F2001_Y

| CSES collects information on the month of birth of the respondent
| to determine the eligibility of the respondent (i.e., entitlement
| to vote). However, this variable is not made publicly available
| to preserve respondent confidentiality.

| Data are unavailable for FRANCE (2022).

| ELECTION STUDY NOTES - AUSTRALIA (2022): F2001_Y

| Respondents were not asked their year and month of birth, but
| their age as of September 30, 2021. The variable represents the
| calculated year of birth, using the year of the interview and
| the age of the respondent. For persons whose birthday was
| after the interview, the year of birth will hence be incorrect.

| ELECTION STUDY NOTES - AUSTRIA (2024): F2001_Y

| For a small number of respondents, the values for the year of
| birth were combined into categories to protect anonymity and to
| reduce the risk of re-identification.

| CSES Code Election Study Code/Category

|-----
| 1942. 1942 or earlier
| 2006. 2006-2007

| ELECTION STUDY NOTES - FRANCE (2022): F2001_Y

| The French 2022 election study did not include a variable on age (F2001_A) or year of birth (F2001_Y). Therefore, respondents' eligibility to vote cannot be verified. However, the tabulation of an age group variable showed that this is only the case for 19 respondents who are classified as 24 years or younger and four respondents who did not respond to the question.

| ELECTION STUDY NOTES - NEW ZEALAND (2023): F2001_Y

| A comparison between F2001_A (Age of Respondent) and F2001_Y (Year of Birth) shows that F2001_Y includes 38 respondents being coded as missing whilst information on their age is included in F2001_A. Whilst F2001_Y is based on a survey question asking respondents about their year of birth, F2001_A is coded based on information from the electoral roll and hence, available for all respondents.

| ELECTION STUDY NOTES - SWEDEN (2022): F2001_Y

| In the Sweden 2022 study, data on respondents' year of birth have not been collected in the survey but were obtained from population registers. Generally, register data were sourced in 2022, i.e., the election year.

| ELECTION STUDY NOTES - TAIWAN (2024): F2001_Y

| Five respondents refused to provide their year of birth. Collaborators note eligibility of the five individuals has been assessed before the interview.

| ELECTION STUDY NOTES - UNITED STATES (2024): F2001_Y

| The ANES 2024 Time Series study does not disclose respondents' year and month of birth, but their age as of election day. F2001_Y was approximated by subtracting respondents' age from 2024. Respondents who were 80 years or older at the time of the election, that is, all respondents born before November 4, 1944, are coded as 1944 (N = 333).

 F2001_A >>> AGE OF RESPONDENT (IN YEARS)

Age of respondent (in years).

.....

018-118. AGE, IN YEARS

9997. VOLUNTEERED: REFUSED

9998. VOLUNTEERED: DON'T KNOW

9999. MISSING

| VARIABLE NOTES: F2001_A

| DERIVATIVE VARIABLE

| F2001_A was calculated by subtracting the year of birth
(variable F2001_Y) from the election year (variable F1009),
unless specified otherwise in ELECTION STUDY NOTES below.

| For further information on individual election studies, users are
advised to carefully read the ELECTION STUDY NOTES for F2001_Y.

| Data are unavailable for FRANCE (2022).

| ELECTION STUDY NOTES - AUSTRIA (2024): F2001_A

| For 31 respondents, the respondent age cannot be calculated
because the information on the year of birth was grouped into
two categories to protect anonymity and reduce the risk of re-
identification (see ELECTION STUDY NOTES of F2001_Y). Due to
this limitation, it is not feasible to construct the
corresponding derivative variable.

| ELECTION STUDY NOTES - FRANCE (2022): F2001_A

| The French 2022 election study did not include a variable on age
(F2001_A) or year of birth (F2001_Y). Therefore, respondents'
eligibility to vote cannot be verified. However, the tabulation
of an age group variable showed that this is only the case for 19
respondents who are classified as 24 years or younger and four
respondents who did not respond to the question.

| ELECTION STUDY NOTES - NEW ZEALAND (2023): F2001_A

| A comparison between F2001_A (Age of Respondent) and F2001_Y
(Year of Birth) shows that F2001_Y includes 38 respondents
coded as missing whilst information on their age is included in
F2001_A. Whilst F2001_Y is based on a survey question asking
respondents about their year of birth, F2001_A is coded based
on information from the electoral roll and hence, available for
all respondents.

| ELECTION STUDY NOTES - UNITED STATES (2024): F2001_Y

| The ANES 2024 Time Series provides respondents' age as of
election day. Respondents who were 80 years or older at the time
of the election, that is, all respondents born before November 4,
1944, are coded as 80 (N = 333).

```

F2001_GG      >>> BIRTH GENERATION: GREATEST GENERATION
                (BORN 1927 OR BEFORE)
F2001_GS      >>> BIRTH GENERATION: SILENT GENERATION
                (BORN FROM 1928 TO 1945)
F2001_GBB     >>> BIRTH GENERATION: BABY BOOMERS
                (BORN FROM 1946 TO 1964)
F2001_GX      >>> BIRTH GENERATION: GENERATION X
                (BORN FROM 1965 TO 1980)
F2001_GY      >>> BIRTH GENERATION: GENERATION Y
                (BORN FROM 1981 TO 1996)
F2001_GZ      >>> BIRTH GENERATION: GENERATION Z
                (BORN FROM 1997 ONWARDS)

```

Generations based on the respondent's year of birth.

- 0. RESPONDENT NOT PART OF GENERATION
- 1. RESPONDENT PART OF GENERATION
- 9. MISSING

| VARIABLE NOTES: F2001_G

| DERIVATIVE VARIABLE

| The F2001_G variables distinguish six demographic cohorts
| of respondents represented in the CSES MODULE 6, namely:

F2001_GG:	Generation Greatest,	Rs. born before 1927
F2001_GS:	Silent Generation,	Rs. born from 1928 to 1945
F2001_GBB:	Baby Boomers,	Rs. born from 1946 to 1964
F2001_GX:	Generation X,	Rs. born from 1965 to 1980
F2001_GY:	Generation Y,	Rs. born from 1981 to 1996
F2001_GZ:	Generation Z,	Rs. born from 1997 onwards

| Users are advised that the generational boundaries as described
| above are primarily based on generational classifications
| employed in advanced democracies. As generational experiences
| are in part determined by social, cultural, political and/or
| economic events that might be unique to a polity, users are
| advised that generational classifications may differ in
| particular polities and these classifications, based on theory,
| merely act as a guide.

| Respondents were asked to provide their year of birth directly
| (variable F2001_Y). Hence, F2001_Y forms the basis for the
| grouping.

| Data for F2001_G* are unavailable for FRANCE (2022).

| ELECTION STUDY NOTES - AUSTRIA (2024): F2001_GG & F2001_GS

| Twelve respondents born in 1942 or earlier were initially
 | grouped into a single category in the Austrian 2024 Election
 | Study to protect anonymity and minimize the risk of re-
 | identification. Since the exact year of birth for these
 | respondents is not available, it is unclear whether they were
 | born before or after 1928. As a result, the variables F2001_GG
 | and F2001_GS are coded as missing for these 12 respondents.

	General high school (gymnasium with leaving examination)
06.	Higher professional education, short-cycle higher education (2-year program + degree)
07.	Higher professional tertiary education (former VS, 3-year program, 1st Bologna degree)
	University degree (4-year program (or 6) + diploma)
08.	Specialization (1 year)
	Master's degree ("magisterij")
	Bologna master's degree ("bolonjski magisterij")
09.	Doctorate
99.	Other

Researchers are advised that the former magisterij of science, which was superseded by the Bologna master program, is classified as equivalent to a third cycle higher education program (ISCED LEVEL 8). According to the mapping table provided by UNESCO: "Graduates must prepare master's thesis, which comprises a research paper and constitutes a contribution to knowledge in specialized field. As a rule, the study for obtaining the "magisterij znanosti" qualification lasts three years (implementation of study lasts two years, the additional year is intended for preparing the master's thesis), of which at least one yer of independent research work. The HE Act 2006 places "Magisterij" of science (former - pre bologna) at the same level as new 3rd cycle HE programmes." See https://download.uis.unesco.org/ISCED%20mapping/ISCED_2011_Mapping_Slovenia.xlsx (Date accessed: November 13, 2025). However, as the survey does not include a specification of

| whether "magisterij" refers to pre-Bologna programs exclusively,
 | respondents with a "magisterij" degree are classified as ISCED
 | LEVEL 7 in CSES - the general equivalent to a master's degree.

F2004 >>> MARITAL STATUS OR CIVIL UNION STATUS

D04. Respondent's marital or civil union status.

.....

1. MARRIED OR LIVING TOGETHER AS MARRIED
2. WIDOWED
3. DIVORCED OR SEPARATED (MARRIED BUT SEPARATED/
NOT LIVING WITH LEGAL SPOUSE)
4. SINGLE, NEVER MARRIED
5. [SEE ELECTION STUDY NOTES]
7. VOLUNTEERED: REFUSED
8. VOLUNTEERED: DON'T KNOW
9. MISSING

| VARIABLE NOTES: F2004

| F2004 details the respondent's current marital status.
| For instance, a person who is both divorced and living together
| as married would be coded 1.

| Data are unavailable for FRANCE (2022).

| ELECTION STUDY NOTES - NEW ZEALAND (2023): F2004

| The question wording for F2004 deviates from the CSES MODULE 6
| standards. The question asked respondents whether they were
| currently living with a spouse or partner (coded as 1) or not
| (coded as 2). For F2004, respondents who answered "Yes" were
| recoded into "1. MARRIED OR LIVING TOGETHER AS MARRIED".
| Respondents who answered "No" were recoded into "5. [SEE ELECTION
| STUDY NOTES]". This category could thus include respondents who
| were widowed, divorced or separated, or single or never married.

CSES Code	Election Study Code/Category
01.	Currently living with a spouse or partner
05.	Currently not living with a spouse or partner
ELECTION STUDY NOTES - SWEDEN (2022): F2004	
In the Sweden 2022 study, data on respondents' marital status have not been collected in the survey but were obtained from population registers.	
Generally, register data were sourced in 2022, i.e., the election year.	
ELECTION STUDY NOTES - SWITZERLAND (2023): F2004	
In the Swiss data, unmarried couples are coded as "single" (category 4). Category 1 "married or living together as married" is reserved for married people.

 97. VOLUNTEERED: REFUSED
 98. VOLUNTEERED: DON'T KNOW

 99. MISSING

| VARIABLE NOTES: F2006

| Respondents who are temporarily unemployed are coded UNEMPLOYED.
 | Respondents on "workfare" or enrolled in a government job
 | training program are coded EMPLOYED.

| There is some inconsistency between studies in the way
 | the responses to the questions about current employment status
 | (F2006) affected the application of the follow-up occupation
 | variables (F2007-F2009). The CSES standard is that the
 | occupation variables are asked from those in labor force.
 | However, in some cases, for respondents categorized as not in
 | labor force in F2006 (codes 6-12) the occupation variables may
 | report respondent's last occupation. Hence, the responses
 | concerning occupation that belong to respondents not in labor
 | force presumably reflect their previous or last occupation.

| ELECTION STUDY NOTES - AUSTRIA (2024): F2006

| In the 2024 Austrian study, respondents' employment status was
 | assessed by two successive survey questions.

| Respondents were first asked how best to describe their current
 | situation (i.e. employment status). In a follow-up question,
 | respondents who stated that they were employed or in civil/
 | military service indicated the number of hours they worked per
 | week.

| The answers to these two questions were used to code F2006, as
 | shown below:

CSES Code	Election Study Code/Category
01.	Employed, more than 35 working hours weekly, Employed, apprentice
02.	Employed, 15 - 35 working hours weekly
03.	Employed, less than 15 working hours weekly
04.	Employed, helping family member

05.	Unemployed or seeking for work
06.	Student at school, Student at university
07.	Retired
08.	A homemaker
09.	Unfit for work
10.	Other
11.	On leave
12.	Military/civilian service, voluntary social year
13.	Other training

ELECTION STUDY NOTES - BRAZIL (2022): F2006

In the Brazilian 2022 study, F2006 was constructed from two consecutive survey questions. Respondents were first asked about their general employment status (no working hours specified). This variable distinguished the following groups in the labor force: employees (public sector; private sector with/without register), self-employed, self-employed in liberal occupations (doctors, lawyers, etc.), employers, and trainees (with/without remuneration). F2006 does not distinguish between these groups in the labor force, but classifies employed respondents based on a second question, in which respondents in the labor force were asked to specify their weekly working hours, as shown below. Respondents stating to be in the labor force in the first question who did not provide their working hours in the follow-up question are coded "14" in F2006.

CSES code	Election Study Code/Category
01.	Employed - full-time (32 or more hours weekly)
02.	Employed - part-time (15 to less than 32 hours weekly)
03.	Employed - less than 15 hours
04.	Helping family member with remuneration Helping family member without remuneration
05.	Unemployed (looking for a job)
	Unemployed (not looking for a job)
06.	Student
07.	Retired from work
08.	Housewife
09.	Retired (permanently disabled)
13.	Receives pension for deceased spouse
14.	Employed, no working hours specified

ELECTION STUDY NOTES - DENMARK (2022): F2006

CSES Code	Election Study Code/Category
01.	More than full-time (more than 37 hours weekly) Full-time (32 - 37 hours weekly)
02.	Part-time (15 to less than 32 hours weekly)
03.	Less than 15 hours weekly

- | | | |
|--|-----|--|
| | 04. | Helping family member |
| | 05. | Unemployed |
| | 06. | Student, in school, in vocational training |
| | 07. | Retired |
| | 08. | Housewife, homemaker, home duties |
| | 09. | Permanently disabled |
| | 10. | Others, not in the labor force |
| | 11. | On maternity or parental leave |
| | | Long-term sick leave |

| ELECTION STUDY NOTES - FRANCE (2022): F2006

| For the French 2022 study, F2006 was constructed from two
| consecutive survey questions. Respondents were first asked about
| their general employment status (no working hours specified).
| In a second question, respondents who stated to be employed in
| the first question were asked whether they work full-time or
| part-time (without a specification of working hours).
| Respondents stating to be employed part-time in the follow-up
| question are coded "2" in F2006, although we do not know the
| exact working hours.

| CSES code Election Study Code/Category

- | | | |
|--|-----|--|
| | 01. | Employed - full-time |
| | 02. | Employed - part-time |
| | 05. | Unemployed (registered or not with Pole Emploi,
an unemployment agency) |
| | 06. | Students, trainees or unpaid interns |
| | 07. | Retired, retired from business, early retirement |
| | 08. | Housewife or homemaker |
| | 09. | Inactive due to disability |
| | 10. | Other situation of inactivity |

| ELECTION STUDY NOTES - NEW ZEALAND (2023): F2006

| The question wording for F2006 deviates from the CSES MODULE 6
| standards. While CSES conventions suggest respondents report
| a single primary employment status, respondents in the New
| Zealand 2023 study were asked to mark all response options
| applying to their situation. Hence, e.g., retired respondents or
| students with side jobs could place themselves as retirees/
| students and being employed simultaneously.
| Following the collaborator's suggestion, respondents indicating
| to be employed to a certain extent were classified as such,
| irrespective of whether other categories also applied (student
| status, retirement, looking for work, etc.).
| Additionally, researchers are advised that the New Zealand
| 2023 survey distinguished between full-time (32 or more hours
| a week) and part-time employment (less than 32 hours a week),
| without a further differentiation of part-time employment as
| envisaged by CSES. Respondents working full-time were recoded
| into "01. EMPLOYED - FULL-TIME (32+ HOURS WEEKLY)", matching the
| CSES coding scheme. Respondents working part-time were recoded

into "02. EMPLOYED - PART-TIME (15-32 HOURS WEEKLY)".
 Finally, the New Zealand 2023 distinguished between unpaid work within or outside the home. The former group was classified as "08. HOME MAKER, HOME DUTIES", the latter as "13. [SEE ELECTION STUDY NOTES]".

CSES Code	Election Study Code/Category
01.	Working full-time for pay or other income (32 or more hours per week)
02.	Working part-time for pay or other income (less than 32 hours per week)
05.	Unemployed, laid off, looking for work
06.	At school, university, or other educational institution
07.	Retired
08.	Working unpaid within the home
09.	Temporarily or permanently disabled, unable to work
13.	Working unpaid outside the home

ELECTION STUDY NOTES - NORTH MACEDONIA (2024): F2006

Respondents spontaneously answering to be self-employed were classified according to their weekly working hours. Furthermore, researchers are advised that part-time employment was conceptualized slightly differently in the North Macedonian survey: Unlike CSES, which classifies part-time employment as 15-32 hours weekly, the 2024 North Macedonian survey assessed part-time work as 15-less than 32 hours weekly.

ELECTION STUDY NOTES - SLOVAKIA (2023): F2006

For the Slovak 2023 study, F2006 was constructed from two consecutive survey questions. Respondents were first asked about their general employment status (no working hours specified): "Which of the following answers best describes your current situation? If you are currently not working for a salary due to maternity/parental leave, illness, vacation, etc., please answer as you would normally."
 In a second question, respondents who stated to be employed in the first question were asked to provide their weekly working hours: "How many hours a week do you usually work - including overtime - in paid work?" Respondents with multiple jobs were asked to add up working time across all employments. Answers to this second follow-up question were used to distinguish between full- and part-time employment for F2006. Employed respondents not stating their weekly working hours were classified as "13. [SEE ELECTION STUDY NOTES]".

CSES Code	Election Study Code/Category
01.	Working, more than 32 hours a week
02.	Working, 15 - 32 hours a week

- | | | |
|--|-----|--|
| | 03. | Working, 14 hours or less a week |
| | 05. | Unemployed and looking for a job |
| | 06. | Studying |
| | | Training |
| | 07. | Retired |
| | 08. | In a household, taking care of kids or other relatives |
| | 09. | long-term ill or on disability pension |
| | 10. | Other |
| | 13. | Working, no working hours specified |

| ELECTION STUDY NOTES - SWITZERLAND (2023): F2006

| In Switzerland, a full-time employment generally starts from 40 hours per week. Hence, the first two response categories are slightly different from CSES categories:

CSES Code	Election Study Code/Category

1.	Employed: Full-Time (40 or more hours weekly)
2.	Employed: Part-Time (15 to 39 hours weekly)

| ELECTION STUDY NOTES - TAIWAN (2024): F2006

| Researchers are advised that some of the 157 respondents classified as "8. HOMEMAKER, HOME DUTIES" might engage in a family business or domestic crafting. Collaborators note that in Taiwan, certain traditional industries rely on family work (OEM), which typically does not have fixed working hours, a stable income, mandatory obligations, or a single employer. However, the respective individuals would still consider their main role as homemakers, and would only assist in a family-run business occasionally.

| ELECTION STUDY NOTES - TURKIYE (2023): F2006

| In the Turkish 2023 study, respondents' employment status was assessed by two successive survey questions. Respondents were first asked if they currently had a paid job, and if so, whether full-time or part-time. This first question distinguished between the following categories:

- | | | |
|--|-----|--|
| | 01. | Employed - full-time (32+ hours weekly) (N = 558) |
| | 02. | Employed - part-time (15-32 hours weekly) (N = 15) |
| | 03. | Employed - less than 15 hours (N = 9) |
| | 04. | Helping family member (N = 14) |
| | 05. | Unemployed, employed in the past (N = 345) |
| | 06. | Unemployed, never worked (N = 552) |

| Categories 01. - 04. were used for coding F2006. Respondents without a paid job at the time of the interview (categories 05. and 06.) were supposed to be asked for further details on their current situation in a follow-up question. However, due to a misspecified skip pattern, only the 552 respondents stating to never have been employed were asked the follow-up question. Hence, for the 345 respondents stating in the first question

to have been employed in the past, further details on their current employment status are unavailable. These respondents are coded "13" in F2006.

Overall, categories for F2006 are as follows:

CSES Code	Election Study Code/Category
1.	Paid job, 32 hours or more per week
2.	Paid job, 15 - 32 weekly working hours
3.	Paid job, less than 15 weekly working hours
4.	Assistance to family members (unpaid family worker)
5.	Never had a paid job, unemployed/looking for work
6.	Never had a paid job, student, in school
7.	Never had a paid job, retired
8.	Never had a paid job, homemaker
13.	Respondent had a paid job in the past, no further information available

ELECTION STUDY NOTES - UNITED STATES (2024): F2006

The weekly working hours were asked separately and combined for F2006.

Some of the respondents who are coded as unemployed, retired, permanently disabled, housewife/home duties, or student did nevertheless indicate certain amounts of working hours per week. Analysts interested in these data are advised to refer to the original ANES dataset.

CSES Code	Election Study Code/Category
01.	Working now only, more than 32 hours a week
02.	Working now only, 15 - 32 hours a week
03.	Working now only, 14 hours or less a week
05.	Unemployed, no mention of retired, disabled, homemaker or student
06.	Student, no other occupation Student and working now, working <20 hours per week or DK/RF hours Working now and student, working 20+ hours/week
07.	Retired, no other occupation Retired and working now, working <20 hours per week or DK/RF hours Working now and retired, working 20+ hours/week
08.	Homemaker, no other occupation Homemaker and working now, working <20 hours per week or DK/RF hours Working now and homemaker, working 20+ hours/week
09.	Permanently disabled, not working Perm. disabled and working now, working <20 hours per week or DK/RF hours Working now and perm. disabled, working 20+ hours/week
13.	Did not work (or retired)

| 99. Refused/Don't know/Inapplicable

999. MISSING

| VARIABLE NOTES: F2007

|

| F2007 details the respondent's main occupation; that is, the job
| at which the respondent spends the most time or if the respondent
| spends an equal amount of time on two jobs, it is the one from
| which the respondent earns the most money.

| For respondents who are currently employed, this variable reports

| their current occupation. For respondents who are retired or not
 | currently working, F2007 reports respondent's last occupation.

| Coding conventions employ the first two digits of the 2008
 | ISCO / ILO International Standard Classification of Occupations
 | Code from the International Labor Office, CH-1211, Geneva 22,
 | Switzerland.

| An English-language description of the ISCO-08 standard can be
 | found here:

| [http://](http://www.ilo.org/public/english/bureau/stat/isco/docs/resol08.pdf)
 | www.ilo.org/public/english/bureau/stat/isco/docs/resol08.pdf
 | (Date accessed: March 28, 2024).

| In some cases, it has not been possible to strictly adhere to the
 | two-digit ISCO/ILO conventions. Users will find that some
 | categories have been added to the ISCO/ILO list in order to
 | accommodate the occupations of respondents who were not easily
 | classified. These include categories referring to the first digit
 | of the 2008 ISCO / ILO occupations code. In these cases, zeros
 | were added to preserve the two-digit structure (e.g.,
 | 90. ELEMENTARY OCCUPATIONS [NOT FURTHER SPECIFIED]). Please
 | refer to the ELECTION STUDY NOTES below for clarification of the
 | meaning of the additional codes.

| See also VARIABLE NOTES for F2006.

| Data are unavailable for BRAZIL (2022), FRANCE (2022),
 | MONTENEGRO (2023), and UNITED STATES (2024).

| ELECTION STUDY NOTES - NEW ZEALAND (2023): F2007

| For respondents not in the labor force (F2006), the question was
 | asked with respect to their previous employment.

| ELECTION STUDY NOTES - NORTH MACEDONIA (2024): F2007

| Retired or unemployed respondents were asked this question with
 | respect to their previous occupation.

| ELECTION STUDY NOTES - PORTUGAL (2022 & 2024): F2007

| Respondents' occupation was asked as an open-ended question -
 | "In as much detail as possible, please tell me, what is your
 | main occupation/professional activity? If you are currently
 | retired, unemployed, or disabled for work, list the last primary
 | occupation you previously held." Based on the answer,
 | interviewers assigned on the spot an ISCO code to the respondent.

| ELECTION STUDY NOTES - SLOVENIA (2022): F2007

| Respondents' main occupation was assessed with two consecutive
 | survey questions. The first asked respondents to classify their
 | occupation according to the ten major ISCO-08 groups, the most

| general groups comprising only the first digit of the ISCO coding
| scheme. Respondents not knowing where to place themselves were
| invited to provide further details on their job in an open-ended
| follow-up question. For CSES, F2007 only reflects answers to the
| first question.

| ELECTION STUDY NOTES - SWEDEN (2022): F2007

| Collaborators advise F2007 has been collected based on public
| records data from Statistics Sweden, following the Swedish
| Standard Classification of Occupations (SSYK12). Collaborators
| mapped SSYK12 codes to the two-digit-version of ISCO-08 using
| the translation key document by Statistics Sweden.
| SSYK12 codes that could not be mapped to ISCO-08 have been
| classified as "999. MISSING" in F2007.

| ELECTION STUDY NOTES - SWITZERLAND (2023): F2007

| Due to data protection considerations, respondents from the
| Swiss 2023 election study were grouped according to the ten
| major ISCO-08 groups, the most general groups comprising only
| the first digit of the ISCO coding scheme. This approach was
| chosen primarily to ensure the confidentiality of participant
| data.

| For respondents who were not in the labor force, F2007 refers
| to their previous occupation resulting in 1,164 respondents who
| reported not to be in the labor force (F2006) to be asked about
| their main occupation.

| ELECTION STUDY NOTES - TAIWAN (2024): F2007

| The Taiwanese 2024 study classified respondents' main occupation
| based on a coding scheme established by Taiwan's Ministry of
| Labor. For the sake of consistency and comparability across time,
| this coding scheme has been in place since 2001. The below table
| lists how the original occupation codes were mapped to the ISCO
| 08 scheme in F2007.

CSES Code	Election Study Code/Category
00.	Servicemen
10.	Other Managers (Public/Private)

 F2008 >>> SOCIO-ECONOMIC STATUS

D07a. Respondent's socio economic status.

-
1. WHITE COLLAR
 2. WORKER
 3. FARMER
 4. SELF-EMPLOYED

 7. VOLUNTEERED: REFUSED
 8. VOLUNTEERED: DON'T KNOW

 9. MISSING

| VARIABLE NOTES: F2008

| The categories provided in F2008 are intended to distinguish
 | among the following groups:

- | 1. White Collar:
 | Broad occupational grouping of workers engaged in non-manual
 | labor: Managers, salaried professionals, office workers,
 | sales personnel, and proprietors are generally included in
 | the category.
- | 2. Worker:
 | Broad occupational grouping of workers engaged in manual labor.
- | 3. Farmer:
 | Normally persons self-employed in farming.
- | 4. Self-Employed:
 | Self-employed occupations of all kinds, excluding self-employed
 | farming. Includes, for example entrepreneurs, shop keeper,
 | professionals like lawyers, medical doctors etc.

| There is some inconsistency between studies in the way
 | the responses to the questions about current employment status
 | (F2006) affected the application of the follow-up occupation
 | variables (F2008, F2009). The CSES standard is that the
 | occupation variables are asked from those in the labor force.
 | However, in some cases, for respondents categorized as not in
 | the labor force in F2006 (codes 6-12) the occupation variables
 | may report respondent's last occupation. Hence, the responses

concerning occupation that belong to respondents not in the labor force presumably reflect their previous or last occupation.

Data on F2008 for respondents out of labor force are available for AUSTRIA (2024), BRAZIL (2022), DENMARK (2022), NEW ZEALAND (2023), POLAND (2023), PORTUGAL (2022, 2024), SLOVAKIA (2023), SLOVENIA (2022), SWEDEN (2022), SWITZERLAND (2023), and TURKIYE (2023).

Data are unavailable for FRANCE (2022), MONTENEGRO (2023), TAIWAN (2024), and UNITED STATES (2024).

ELECTION STUDY NOTES - AUSTRIA (2024): F2008

CSES Code	Election Study Code/Category
01.	Salaried employee Public official Public employee Freelancer
02.	Worker
03.	Farmer
04.	Self-employed without employees Self-employed with employees

In the 2024 Austrian election study, respondents who are out of the labor force were asked this question regarding any additional employment (original question SD7c). For example, respondents primarily classified as students - hence considered out of the labor force - could still indicate to be employed as well.

ELECTION STUDY NOTES - BRAZIL (2022): F2008

In the Brazilian 2022 study, F2008 was constructed from two consecutive survey questions. The first question distinguishes between farmers/agricultural workers, blue-collar workers and white collars, irrespective of whether respondents were self-employed or employees. For F2008, respondents were classified as self-employed if they specified to be self-employed in a separate question measuring their employment type. Farmers were classified as "3" in F2008, irrespective of whether they stated to be self-employed or not.

CSES code	Election Study Code/Category
01.	Workers in education, sales personnel, salaried professionals, public administrators, etc.
02.	Workers in industry, mining, construction
03.	Farmer/Agriculture workers
04.	Self-employed/Self-employed in liberal professions (doctors, lawyers etc.) [coded based on respondents' employment status]

| ELECTION STUDY NOTES - DENMARK (2022): F2008

| CSES Code Election Study Code/Category

01.	Clerk without managerial responsibilities
	Clerk with managerial responsibilities
02.	Worker, unskilled (non-specialized)
	Worker, unskilled (specialized)
	Worker, skilled
03.	Self-employed farmer
04.	Self-employed

| Respondents out of the labor force have been asked this question
| concerning their previous occupation.

| ELECTION STUDY NOTES - NEW ZEALAND (2023): F2008

| This variable was derived from two separate variables, F2007
| (Main Occupation) and F2009 (Employment Type), following the
| collaborator's suggestion.

| CSES Code Election Study Code/Category

01.	Labor (Occupation F2007 < 52)
02.	Labor (Occupation F2007 > 70 & F2007 <= 96, or F2007 = 51, or F2007 = 53, or F2007 = 54)
03.	(was) self-employed according to F2009 and a farmer according to F2007 (F2007 = 61 or 4-digit ISCO 08 code = 1311)
04.	(was) self-employed according to F2009 and not a farmer according to F2007

| For respondents who were not in the labor force, F2008 refers
| to their previous occupation.

| ELECTION STUDY NOTES - POLAND (2023): F2008

| Respondents out of the labor force have been asked this question
| concerning their previous occupation.

| ELECTION STUDY NOTES - PORTUGAL (2022): F2008

| Socio-economic status has been asked of 370 respondents who are
| out of the labor force at the time of the interview. For Portugal
| (2022), this question has been asked to students to provide
| answers relative to the main income provider in the household.
| Additionally, respondents who were unemployed, retired,
| permanently disabled were still asked to report relative to the
| latest job before their current situation.

| ELECTION STUDY NOTES - PORTUGAL (2024): F2008

Socio-economic status has been asked of 350 respondents who are out of the labor force at the time of the interview. For the Portugal (2024) study, this question has been asked to students to provide answers relative to the main income provider in the household. Additionally, respondents who were unemployed, retired, permanently disabled were still asked to report relative to the latest job before their current situation.

ELECTION STUDY NOTES - SLOVAKIA (2023): F2008

The deposited variable on respondents' socio-economic status in the Slovakian study did not match the categories CSES uses for F2008. Thus, this variable is created from the deposited variable and ISCO codes for the variable F2007. The following recodes have been made:

CSES Code	Election Study Code/Category
01.	Employee and ISCO occupation codes 59 and lower
02.	Employee and ISCO occupation codes 60 and higher
04.	Self-employed (without employees) Self-employed/entrepreneur with employees

Respondents with multiple jobs were asked to answer F2008 with respect to their main job. Respondents out of the labor force answered F2008 with respect to their previous employment.

ELECTION STUDY NOTES - SLOVENIA (2022): F2008

Respondents out of the labor force have been asked this question concerning their previous occupation.

ELECTION STUDY NOTES - SWEDEN (2022): F2008

Respondents out of the labor force have been asked this question with respect to their previous occupation. Further, the coding scheme employed by the Swedish 2022 study to classify occupational groups is more fine-grained than that envisaged by CSES. The following table lists how the original variable has been recoded for F2008:

CSES Code	Election Study Code/Category
01.	White-collar worker White-collar worker with a supervisory role White-collar worker with a managerial/executive role
02.	Blue-collar worker Blue-collar worker with a supervisory role
03.	Farmer
04.	Self-employed: no employees Self-employed: 1-9 employees Self-employed: 10 or more employees

| ELECTION STUDY NOTES - SWITZERLAND (2023): F2008

| Respondents' socio-economic status was pre-coded by
| collaborators based on a combination of respondents' main
| occupation (F2007) and their current position at work, another
| variable included in the post-election survey, which was used to
| identify the self-employed.

| For respondents who were not in the labor force, F2008 refers
| to their previous occupation resulting in 1,164 respondents who
| reported not to be in the labor force (F2006) to be asked about
| their socio economic status.

F2009 >>> EMPLOYMENT TYPE - PUBLIC OR PRIVATE

D08. Whether respondent's employment is private or public.

.....

1. PUBLIC SECTOR
2. PRIVATE SECTOR
3. MIXED
4. "THIRD SECTOR"/NON-PROFIT SECTOR

5. [SEE ELECTION STUDY NOTES]
6. [SEE ELECTION STUDY NOTES]

7. VOLUNTEERED: REFUSED
8. VOLUNTEERED: DON'T KNOW

9. MISSING

| VARIABLE NOTES: F2009

| There is some inconsistency between studies in the way the
| responses to the questions about current employment status
| (F2006) affected the application of the follow-up occupation
| variables (F2008, F2009). The CSES standard is that the
| occupation variables are asked from those in the labor force.
| However, in some cases, for respondents categorized as not in
| the labor force in F2006 (codes 6-12) the occupation variables
| may report respondent's last occupation. Hence, the responses
| concerning occupation that belong to respondents not in the
| labor force presumably reflect their previous or last occupation.

| See also VARIABLE NOTES for F2006.

| Data on F2009 for respondents out of labor force are available
| for AUSTRIA (2024), BRAZIL (2022), DENMARK (2022), FRANCE (2022),
| MONTENEGRO (2023), NEW ZEALAND (2023), POLAND (2023), PORTUGAL

(2022, 2024), SLOVENIA (2022), SWEDEN (2022), SWITZERLAND (2023),
TAIWAN (2024), TURKIYE (2023), and UNITED STATES (2024).

Data are unavailable for SLOVAKIA (2023).

ELECTION STUDY NOTES - AUSTRALIA (2022): F2009

CSES Code	Election Study Code/Category
05.	Self-employed
06.	Employee in a family business or farm

ELECTION STUDY NOTES - AUSTRIA (2024): F2009

In the 2024 Austrian election study, respondents who are out of the labor force were asked this question regarding any additional employment (original question SD7c). For example, respondents primarily classified as students - hence considered out of the labor force - could still indicate to be employed as well.

ELECTION STUDY NOTES - BRAZIL (2022): F2009

CSES Code	Election Study Code/Category
01.	Public sector
02.	Private sector
	Self-employed
03.	Mixed
04.	Third sector/non-profit sector
05.	Other

CSES Code	Election Study Code/Category
01.	Public: state
	Public: regions
	Public: municipalities
02.	Private
03.	Mixed
04.	Nonprofit organization

Respondents out of the labor force have been asked this question concerning their previous occupation.

ELECTION STUDY NOTES - FRANCE (2022): F2009

CSES Code	Election Study Code/Category
01.	Public employee
	Employees of a local authority or low-cost housing association
	Hospital civil service employee

| Employee of a public company
 | 02. Employee of a company, craftsman or association
 | Employee of a private individual
 | Salaried business owner, CEO, minority manager
 | or partner.
 | 05. Self-employed or a freelancer
 |
 | Retired or unemployed respondents were asked this question
 | with regards to their previous occupation (applies to 480 cases).

| ELECTION STUDY NOTES - MONTENEGRO (2023): F2009

| Data are available for 18 respondents out of the labor force,
 | e.g. because retired persons in Montenegro are permitted to work,
 | the affected respondents were on sick leave at the time of the
 | survey, or because they make an income by renting property.
 | The two unemployed respondents stating their employment type
 | in F2009 have erroneously answered the question. Data remain
 | unchanged.

| ELECTION STUDY NOTES - NEW ZEALAND (2023): F2009

| The question wording for F2009 deviates from the CSES MODULE 6
 | standards. Data were recoded as follows:

CSES Code	Election Study Code/Category
01.	I am/was working for a state or public agency or enterprise, central or local
02.	I am/was working for a private business
	I am/was self-employed
03.	I am/was working for a mixed public/private, or non-profit organization
08.	Don't know
09.	I have never been in paid employment

| For respondents not in the labor force (F2006), the question was
 | asked with respect to their previous employment.

| ELECTION STUDY NOTES - POLAND (2023): F2009

| Respondents out of the labor force have been asked this question
 | concerning their previous occupation.

| ELECTION STUDY NOTES - PORTUGAL (2022): F2009

| Employment type has been asked of 370 respondents who are
 | out of the labor force at the time of the interview. For
 | Portugal (2022), this question has been asked to students
 | to provide answers relative to the main income provider in the
 | household. Additionally, respondents who were unemployed,
 | retired, permanently disabled were still asked to report
 | relative to the latest job before their current situation.

ELECTION STUDY NOTES - PORTUGAL (2024): F2009

Employment type has been asked of 352 respondents who are out of the labor force at the time of the interview. For Portugal (2024) study, this question has been asked to students to provide answers relative to the main income provider in the household. Additionally, respondents who were unemployed, retired, permanently disabled were still asked to report relative to the latest job before their current situation.

ELECTION STUDY NOTES - SLOVENIA (2022): F2009

Respondents out of the labor force have been asked this question concerning their previous occupation.

ELECTION STUDY NOTES - SWEDEN (2022): F2009

Respondents out of the labor force have been asked this question with respect to their previous occupation.

8. VOLUNTEERED: DON'T KNOW
9. MISSING

| VARIABLE NOTES: F2010_1

| F2010_1 details respondents' household income in quintiles,
| where ranges shown represent sample quintiles (not population
| quintiles).

| Where data were deposited in this format, income ranges shown
| are as originally reported by Collaborators including gaps
| between contiguous sets of ranges.

| Where deposited income data were not grouped into sample
| quintiles, the data have been recoded into quintiles, according
| to sample proportions (not national statistics). For cases where
| it was not possible to compute sample quintiles, the income
| categories approximating sample quintiles the closest have been
| used. Consequently, this variable may contain distributions that
| do not really represent quintiles.

| Depending on how the income data was deposited, the variable
| reports either monthly or annual income. The table below shows
| which of the two applies to the election studies:

```

|   +++ TABLE: INCOME MEASURE TYPE BY ELECTION STUDY
|

```

04.	6,701 - 8,200 PLN
05.	more than 8,200 PLN

In the 2023 Polish election study, Collaborators asked respondents to name their monthly net household income in an open question. However, 983 respondents refusing to name their income received a follow-up question, asking them to place their income in one of twenty income brackets. Income quintiles provided in F2010_1 are based on the continuous data. For the 983 respondents for whom continuous data is not available, data were imputed by using the midpoint of their stated income category. For example, a respondent stating to have a monthly household income between 3,001 and 3,500 PLN is assumed to have a household income of 3,250 PLN - thus falling into the first quintile.

CSES Code	Stated Income (Categorical)	Imputed income (Midpoint)
01.	1,001 - 1,250 PLN	1,125 PLN
	1,251 - 1,500 PLN	1,375 PLN
	1,501 - 1,750 PLN	1,625 PLN

04.	20,000 - 24,000 TRY
05.	more than 24,000 TRY

In the 2023 Turkish election study, Collaborators asked respondents to name their monthly household income in an open question. However, 545 respondents refusing to name their income received a follow-up question, asking them to place their income in one of seven categories. Income quintiles provided in F2010_1 are based on the continuous data. For the 274 respondents for whom continuous data was not available but who answered the follow-up question, data were imputed by using the midpoint of their stated income category. For example, a respondent stating to have a monthly household income between 5,001 and 7,000 TRY is assumed to have a household income of 6,250 TRY - thus falling into the first quintile.

VARIABLE NOTES: F2010_2

F2010_2 details the original data for household income in the format collected by the Collaborators.

In the Election Study Notes below, currency abbreviations are given in the three-letter alphabetical ISO-4217 format as described by the International Organization for Standardization. An English-language description of the ISO-4217 standard can be found here:
<https://www.iso.org/iso-4217-currency-codes.html>
(Date accessed: March 28, 2024).

ELECTION STUDY NOTES - AUSTRALIA (2022): F2010_2

Respondents were asked to provide their annual gross income.

CSES Code	Election Study Code/Category
01.	no income
02.	less than 15,000 AUD
03.	15,000 - 25,000 AUD
04.	25,001 - 35,000 AUD
05.	35,001 - 45,000 AUD
06.	45,001 - 60,000 AUD
07.	60,001 - 80,000 AUD
08.	80,001 - 100,000 AUD
09.	100,001 - 120,000 AUD

06.	2,700 to less than 3,100 EUR
07.	3,100 to less than 3,700 EUR
08.	3,700 to less than 4,300 EUR
09.	4,300 to less than 5,500 EUR
10.	5,500 or more EUR

ELECTION STUDY NOTES - BRAZIL (2022): F2010_2

In the 2022 Brazilian election study, Collaborators asked respondents to name their monthly household income in an open question. Respondents not providing their income received a follow-up question, asking them to place their income in one of the following eight categories:

01.	up to 1,212 BRL (up to one minimum salary)
02.	1,212.01 - 2,424 BRL (one to two minimum salaries)
03.	2,424.01 - 3,636 BRL (two to three minimum salaries)
04.	3,636.01 - 6,060 BRL (three to five minimum salaries)
05.	6,060.01 - 12,120 BRL (five to ten minimum salaries)
06.	12,120.01 - 18,180 BRL (ten to fifteen minimum salaries)
07.	18,180.01 - 24,240 BRL (fifteen to twenty min. salaries)
08.	24,240.00 and more BRL (more than twenty min. salaries)

Collaborators combined answers from both income questions before depositing the data. This combined variable was used for coding F2010_.

ELECTION STUDY NOTES - DENMARK (2022): F2010_2

Respondents were asked to provide their annual gross household income.

CSES Code	Election Study Code/Category
01.	less than 100,000 DKK
02.	100,000 - 149,999 DKK
03.	150,000 - 199,999 DKK

10.	1,201 - 1,500 EUR
11.	more than 1,501 EUR

ELECTION STUDY NOTES - NEW ZEALAND (2023): F2010_2

Respondents were asked to indicate their yearly household income before tax between April 1, 2022, and March 31, 2023, placing themselves in one of the following income brackets:

CSES Code Election Study Code/Category

01.	no income
02.	less than 44,521 NZD
03.	44,521 - 80,179 NZD
04.	80,180 - 123,434 NZD
05.	123,435 - 183,569 NZD

| 06. more than 183,570 NZD

| ELECTION STUDY NOTES - NORTH MACEDONIA (2024): F2010_2

| The monthly household income is provided as a continuous
| variable, measured in Macedonian denar (MKD).

| ELECTION STUDY NOTES - POLAND (2023): F2010_2

| In the 2023 Polish election study, Collaborators asked
| respondents to name their monthly net household income in an open
| question. However, 983 respondents refusing to name their
| income received a follow-up question, asking them to place their
| income in one of the following twenty categories, which were
| coded as follows:

CSES Code	Election Study Code/Category
01.	Up to 300 PLN
02.	301 - 500 PLN
03.	501 - 750 PLN
04.	751 - 1,000 PLN
05.	1,001 - 1,250 PLN
06.	1,251 - 1,500 PLN
07.	1,501 - 1,750 PLN
08.	1,751 - 2,000 PLN
09.	2,001 - 2,250 PLN
10.	2,251 - 2,500 PLN
11.	2,501 - 2,750 PLN
12.	2,751 - 3,000 PLN
13.	3,001 - 3,500 PLN
14.	3,501 - 4,000 PLN
15.	4,001 - 4,500 PLN
16.	4,501 - 5,000 PLN
17.	5,001 - 7,000 PLN
18.	7,001 - 8,000 PLN
19.	8,001 - 10,000 PLN
20.	above 10,000 PLN

| The 983 respondents who placed themselves in one of the
| categories rather than naming their detailed household income
| all placed themselves in categories 5 to 20.
| For all other respondents in the sample, F2010_2 provides the
| monthly household income on a continuous scale, as indicated by
| respondents.

| ELECTION STUDY NOTES - PORTUGAL (2022 & 2024): F2010_2

CSES Code	Election Study Code/Category
01.	up to 300 EUR
02.	301 - 750 EUR
03.	751 - 1,500 EUR
04.	1,501 - 2,500 EUR

05. more than 2,500 EUR

Household income variable has been asked in the questionnaire in five categories offered to respondents. Thus, for Portugal, variables F2010_1 and F2010_2 are identical.

ELECTION STUDY NOTES - SLOVAKIA (2023): F2010_2

ELECTION STUDY NOTES - TURKIYE (2023): F2010_2

In the 2023 Turkish election study, Collaborators asked respondents to name their monthly household income in an open question. However, 545 respondents (36% of the sample) refusing to name their income received a follow-up question, asking them to place their income in one of the following seven categories. The 274 respondents answering the follow-up question were coded as follows for F2010_2:

CSES Code	Election Study Code/Category
-----------	------------------------------

01.	Less than 5,000 TRY
02.	5,001 - 7,500 TRY
03.	7,501 - 10,000 TRY
04.	10,001 - 15,000 TRY

05.	15,001 - 25,000 TRY
06.	25,501 - 40,000 TRY
07.	More than 40,000 TRY

For all other respondents in the sample, F2010_2 provides the monthly household income on a continuous scale, as indicated by respondents.

| ELECTION STUDY NOTES - BRAZIL (2022): F2013

| The 2022 Brazilian study included two questions on respondents' race, the first one asking respondents to provide their race in an open-ended question. The second question read: "IBGE - the institute that conducts censuses in Brazil - uses the terms black, brown, white, yellow, and indigenous to classify people's color or race. Which of these terms best describes your color or race?" F2013 is based on the latter question grouping respondents according to official census categories.

CSES Code	Election Study Code/Category
001.	Black
002.	Mixed
003.	White
004.	Yellow
005.	Indigenous

| ELECTION STUDY NOTES - NEW ZEALAND (2023): F2013

| For the New Zealand 2023 study, F2013 identifies respondents of Maori descent. Researchers are advised that F2013 combines information from two sources - the electoral roll and self-reported Maori heritage in the survey ("Are you of Maori ethnicity?"). Respondents were classified as Maori if either or both sources suggested respondents were Maori.

CSES Code	Election Study Code/Category
001.	Maori Descent
002.	No Maori Descent

003.	Roma/Gypsy/Sinti
996.	None of these

| ELECTION STUDY NOTES - UNITED STATES (2024): F2013

| For F2013, respondents were allowed to name more than one race they considered themselves to belong to. The answers were pre-coded by the ANES as follows:

CSES Code	Election Study Code/Category
001.	White, non-Hispanic
002.	Black, non-Hispanic

	003.	Hispanic
	004.	Asian or Native Hawaiian/other Pacific Islander, non-Hispanic alone
	005.	Native American/Alaska Native or other race, non-Hispanic alone
	006.	Multiple races, non-Hispanic

| VARIABLE NOTES: F2015

| F2015 details respondents' country of birth based on country
| codes provided by the United Nations Statistics Division
| ("countries or areas, codes and abbreviations", revised
| February 13, 2002), similar to F1005 and F1006_UN.

| Whenever this is not possible, due to referring to a country
| that does not exist anymore, earlier country codes, according to
| <https://unstats.un.org/unsd/methods/m49/m49chang.htm> were
| employed (Date accessed: December 10, 2024).

| As long as a question on respondents' country of birth was
| included in the questionnaire, native-born citizens were coded
| according to the country code of the appropriate state.

| Data are unavailable for MONTENEGRO (2023) and SLOVAKIA (2023).

| VARIABLE NOTES: F2016

| Data are unavailable for FRANCE (2022).

| ELECTION STUDY NOTES - DENMARK (2022): F2016

| In the 2022 Danish election study, respondents were asked
| separately for each parent whether they were born in Denmark.
| The following table lists how answers to both questions were
| combined for F2016:

CSES Code	Election Study Code/Category
0.	Both father and mother were born in Denmark
1.	At least one parent born outside of Denmark
7.	Refused to answer for both mother and father whether born in or outside of Denmark
8.	Don't know for both parents whether born in or outside of Denmark
	First parent born in Denmark, don't know whether second parent born in or outside of Denmark

ELECTION STUDY NOTES - MONTENEGRO (2023): F2016

The Montenegrin 2023 study assessed parental origin separately for each parent, one answer option being born outside of Montenegro. Collaborators constructed F2016 combining answers from both original items based on parents originating from abroad.

ELECTION STUDY NOTES - NEW ZEALAND (2023): F2016

The New Zealand election study asked respondents whether they had one or more parents born outside of New Zealand. Answers were coded as follows:

CSES Code	Election Study Code/Category
0.	No
1.	Yes, one
	Yes, both

ELECTION STUDY NOTES - SWEDEN (2022): F2016

In the Sweden 2022 study, data on parental origin have not been collected in the survey but were obtained from population registers. Generally, register data were sourced in 2022, i.e., the election year.

ELECTION STUDY NOTES - TAIWAN (2024): F2016

The Taiwanese study asked respondents whether either biological parent was born outside of Taiwan. Answers were coded as follows:

CSES Code	Election Study Code/Category
0.	Neither
1.	Only father
	Only mother
	Both of them

ELECTION STUDY NOTES - TURKIYE (2023): F2016

The Turkish study asked respondents whether either biological

| parent was born in Turkiye. Answers were coded as follows:

CSES Code	Election Study Code/Category
0.	Both my mother and father were born within the borders of Turkiye
1.	Only my mother was born within the borders of Turkiye
	Only my father was born within the borders of Turkiye
	Neither my mother nor my father was born within the borders of Turkiye

| ELECTION STUDY NOTES - UNITED STATES (2024): F2016

| The ANES 2024 study asked respondents whether they had one or more parents born in the U.S. Answers were coded as follows:

CSES Code	Election Study Code/Category
0.	Both parents born in the US
1.	One parent born in the US
	Both parents born in another country
7.	Refused
8.	Don't know

ELECTION STUDY NOTES - NORTH MACEDONIA (2024): F2017

The CSES classification for F2017 distinguishes between multiple Albanian dialects. Collaborators advise the predominant dialect spoken in North Macedonia is Gheg. However, official, state-sponsored education is based on Standard Albanian (Tosk). Therefore, collaborators used the general term "Albanian" commonly employed by North Macedonian surveys with respondents, as asking respondents to specify a dialect would have likely been confusing and challenging for them to answer.

| ELECTION STUDY NOTES - UNITED STATES (2024): F2018

| F2018 reports the federal state a respondent is living in,
| according to US-FIPS codes.
| District data for CSES MODULE 6 were collected for the U.S.
| Presidential Elections, i.e., the main elections. The United
| States use an electoral college system for Presidential
| elections operating on the state level. Hence, users are advised
| to use F2018 for linking district data provided in variables
| F4001 - F4007 to individual respondents, as F2018 corresponds
| to the U.S. states.

 F2019 >>> PRIMARY ELECTORAL DISTRICT

D18. Primary electoral district of respondent.

.....
 00001.-90000. [SEE CODEBOOK PART 4 FOR CODE VALUE LABELS]

99996. NATIONWIDE DISTRICT

99999. MISSING

| VARIABLE NOTES: F2019

| F2019 details respondents' primary electoral districts, using
 | official district identification numbers wherever possible.
 | Deviations from this CSES convention are detailed when applicable
 | in the ELECTION STUDY NOTES.

| In some cases, not all districts in a polity are sampled by
 | the election study. More specific information regarding this
 | is detailed in the tables in the District Data section of the
 | Codebook.

| In some cases, respondents' electoral districts were identified
 | "indirectly," through postal codes, etc., by the CSES Secretariat
 | (always with the help of the appropriate Collaborator(s)). Where
 | postal codes, etc., were ambiguous, cases are coded missing.
 | Refusals and "don't know" are coded missing.

| Data are unavailable for AUSTRIA (2024) and SLOVENIA (2022).

| ELECTION STUDY NOTES - SWEDEN (2022): F2019

=====

|
 | Sweden has two electoral segments: The lower tier returns 310
 | seats from 29 multi-member districts, the upper tier consists of
 | 39 adjustment seats. F2019 and hence district data in F4001-F4007
 | refer to the lower tier.

| ELECTION STUDY NOTES - TAIWAN (2024): F2019

|
 | The 113 members of Taiwan's unicameral parliament, the
 | Legislative Yuan, are elected by parallel voting:
 | 73 seats are awarded by first-past-the-post in single-member
 | districts, six by single non-transferable votes in multi-
 | member districts reserved for indigenous candidates, and the
 | remaining 34 by closed party lists. The district identifier
 | included in CSES, and hence district data, refer to the 73
 | single-member districts, out of which 40 are represented in the
 | Taiwanese 2024 study.

| ELECTION STUDY NOTES - UNITED STATES (2024): F2019

|
 | This variable reports the electoral districts for the U.S. Lower
 | House elections, the House of Representatives. The first two
 | digits of the district codes indicate the federal state (U.S.-
 | FIPS-codes as used in F2018).
 | However, the district data for CSES MODULE 6 were collected for
 | the U.S. Presidential Elections, i.e., the main elections.
 | Considering that the United States uses an electoral college
 | system for Presidential elections that operates on the U.S.
 | state level, the data was collected accordingly. Hence, to link
 | district data to respondents in the CSES dataset, users are
 | advised to make use of the variable F2018 (Region of Residence)
 | which corresponds to the U.S. states.

 F2020 >>> RURAL OR URBAN RESIDENCE

D19. Rural/Urban Residence.

.....

1. RURAL AREA OR VILLAGE
2. SMALL OR MIDDLE-SIZED TOWN
3. SUBURBS OF LARGE TOWN OR CITY
4. LARGE TOWN OR CITY
7. VOLUNTEERED: REFUSED
8. VOLUNTEERED: DON'T KNOW
9. MISSING

| VARIABLE NOTES: F2020

|

Instead of using the CSES-schema, some countries employ the amount of inhabitants for the size of respondent's place of residence. These measurements do not fit the categories generally used for F2020. Consequently, we advise users to carefully read the ELECTION STUDY NOTES of the current variable.

Data are unavailable for TAIWAN (2024) and UNITED STATES (2024).

ELECTION STUDY NOTES - AUSTRALIA (2022): F2020

The answer categories offered to respondents deviated from CSES MODULE 6 standards, including only two response options for F2020. These two options were classified as follows:

CSES Code	Election Study Code/Category
01.	Rest of state
04.	Capital city

ELECTION STUDY NOTES - AUSTRIA (2024): F2020

CSES Code	Election Study Code/Category
01.	Village
02.	Small town
	Middle-sized town
03.	Suburbs of large town
04.	In the center of a large town

ELECTION STUDY NOTES - BRAZIL (2022): F2020

The answer categories offered to respondents deviated from CSES MODULE 6 standards, including only two response options for F2020. These two options were classified as follows:

CSES Code	Election Study Code/Category
01.	Rural
04.	Urban

ELECTION STUDY NOTES - DENMARK (2022): F2020

CSES Code	Election Study Code/Category
1.	A small village with less than 200 inhabitants or rural area
	A town with 200 - 999 inhabitants
	A town with 1,000 - 2,999 inhabitants
2.	A town with 3,000 - 9,999 inhabitants
	A town with 10,000 - 19,999 inhabitants
	A town with 20,000 - 39,999 inhabitants
	A town with over 40,000 inhabitants
3.	In a suburb of Aarhus / Aalborg / Odense
	In a suburb of Copenhagen / Greater Copenhagen

4. Aarhus / Aalborg / Odense
 Copenhagen / Greater Copenhagen

ELECTION STUDY NOTES - FRANCE (2022): F2020

CSES Code	Election Study Code/Category
1.	Rural
2.	A town with less than 20,000 inhabitants
3.	A town with 20,000 - 99,999 inhabitants
4.	A city with 100,000 - 1,999,999 inhabitants
	Greater Paris

ELECTION STUDY NOTES - NEW ZEALAND (2023): F2020

CSES Code	Election Study Code/Category
01.	Rural settlement or other rural area
02.	Small or medium urban area
04.	Large or major urban area

ELECTION STUDY NOTES - NORTH MACEDONIA (2024): F2020

Although the North Macedonian 2024 survey fielded F2020 in accordance with CSES conventions, none of the respondents selected the option "3. SUBURB OF LARGE TOWN OR CITY". Collaborators advise that the term "suburb" is not commonly used throughout the country. The largest city, Skopje, home to about a third of the population, is likely the only place where the concept of "suburbs" might apply. However, people generally do not refer to any of the surrounding neighborhoods using that term, which might explain why none of the interviewees placed themselves in that category.

ELECTION STUDY NOTES - SWEDEN (2022): F2020

For F2020, Swedish respondents were asked in which type of area they lived. The answer categories offered to respondents deviated from CSES MODULE 6 standards and were recoded as follows:

CSES Code	Election Study Code/Category
01.	Rural area
	Smaller town
02.	Larger town
	City: outer area
	City: central area
03.	Large city: outer area/suburb
04.	Large city: central area

ELECTION STUDY NOTES - SWITZERLAND (2023): F2020

Respondents in the Swiss study were not asked this question directly. Instead, the variable was calculated based on

| respondents' residence using classification schemes of the
| Federal Statistical Office (FSO).

| ELECTION STUDY NOTES - UNITED STATES (2024): F2020

| This variable is available only for respondents who answered the
| post-election survey as a self-administered paper-and-pencil
| postal mail-back interview.

F2021 >>> NUMBER IN HOUSEHOLD

D20. Total number of persons in household.

01.-90. NUMBER OF PERSONS

97. VOLUNTEERED: REFUSED

98. VOLUNTEERED: DON'T KNOW

99. MISSING

| VARIABLE NOTES: F2021

| F2021 details the total number of persons living in a household -
| that is, the number of persons living together in the housing
| unit excluding paid employees and persons who pay rent for a
| room.

| Data are unavailable for SWEDEN (2022), TAIWAN (2024), and UNITED
| STATES (2024).

| ELECTION STUDY NOTES - AUSTRIA (2024): F2021

| CSES Code Election Study Code/Category

|-----
| 6. 6 household members or more

| ELECTION STUDY NOTES - FRANCE (2022): F2021

| CSES Code Election Study Code/Category

|-----
| 6. 6 household members or more

| ELECTION STUDY NOTES - SWITZERLAND (2023): F2021

| CSES Code Election Study Code/Category

|-----
| 7. 7 household members or more

| ELECTION STUDY NOTES - NEW ZEALAND (2023): F2021

|
 | Respondents were asked to indicate the number of adults and
 | children living in their household in two consecutive survey
 | questions. Both variables were added together to create F2021.
 | Respondents who left the question on the number of children
 | living in their household blank are assumed not to have any
 | children living with them. For these cases, F2021 has been
 | coded based on the indicated number of adults only.

))) CSES MODULE 6 VARIABLES: MICRO-LEVEL (SURVEY) DATA
 THE CSES MODULE 6 QUESTIONNAIRE

F3001 >>> Q01. POLITICAL INTEREST

Q01. How interested would you say you are in politics? Are you
 very interested, somewhat interested, not very interested, or
 not at all interested?

- 1. VERY INTERESTED
- 2. SOMEWHAT INTERESTED
- 3. NOT VERY INTERESTED
- 4. NOT AT ALL INTERESTED
- 7. VOLUNTEERED: REFUSED
- 8. VOLUNTEERED: DON'T KNOW

F3002_1 >>> Q02a. MEDIA USAGE: WATCH NEWS ON A PUBLIC TELEVISION
 BROADCASTER
 F3002_2 >>> Q02b. MEDIA USAGE: WATCH NEWS ON A PRIVATE TELEVISION
 BROADCASTER
 F3002_3 >>> Q02c. MEDIA USAGE: LISTEN TO THE NEWS ON RADIO
 F3002_4 >>> Q02d. MEDIA USAGE: READ NEWSPAPERS
 F3002_5 >>> Q02e. MEDIA USAGE: ONLINE NEWS SITES
 F3002_6_1 >>> Q02f. MEDIA USAGE: SOCIAL MEDIA

In the next questions, we would like to know what kind of
 media you used to follow news about parties and candidates
 during the recent election campaign. We begin with the
 traditional media of television, radio and newspapers, but

regardless of whether you use these media in the traditional ways or online.

(During the recent election campaign, in a typical week, how many days did you:)

Q02a. Watch the news on a public television broadcaster?

HELP: Interviewer instruction: If the respondent says 'every day' please ask them for a number of days.

Q02b. Watch the news on a private television broadcaster?

HELP: At their discretion, the interviewer may use the optional phrase (the phrase which is in parentheses) if they perceive it would be helpful to the respondent.

Interviewer instruction: If the respondent says 'every day' please ask them for a number of days.

Q02c. Listen to the news on the radio?

HELP: At their discretion, the interviewer may use the optional phrase (the phrase which is in parentheses) if they perceive it would be helpful to the respondent.

Interviewer instruction: If the respondent says 'every day' please ask them for a number of days.

Q02d. Read newspapers, regardless of whether you read them in print or online?

HELP: At their discretion, the interviewer may use the optional phrase (the phrase which is in parentheses) if they perceive it would be helpful to the respondent.

Interviewer instruction: If the respondent says 'every day' please ask them for a number of days.

Q02e. Visit online news sites?

HELP: At their discretion, the interviewer may use the optional phrase (the phrase which is in parentheses) if they perceive it would be helpful to the respondent.

Interviewer instruction: If the respondent says 'every day' please ask them for a number of days.

Q02f. Use social media such as Facebook, Twitter, or WhatsApp to follow news about parties and candidates?

HELP: Interviewer instruction: If the respondent says 'every day' please ask them for a number of days.

.....

- 0. NONE/ZERO DAYS
- 1. ONE DAY
- 2. TWO DAYS
- 3. THREE DAYS
- 4. FOUR DAYS
- 5. FIVE DAYS
- 6. SIX DAYS
- 7. SEVEN DAYS

- 97. VOLUNTEERED: REFUSED
- 98. VOLUNTEERED: DON'T KNOW

- 99. MISSING

| CSES QUESTION CLASSIFICATION: MODULE THEME

| VARIABLE NOTES: F3002_

| Data for F3002_2 are unavailable for DENMARK (2022).
 | Data for F3002_5 are unavailable for DENMARK (2022).

| ELECTION STUDY NOTES - DENMARK (2022): F3002_2 & F3002_5

| Collaborators note F3002_2 and F3002_5 were not included in the
 | Danish 2022 study because there are no private news television
 | broadcasters or relevant independent news sites in Denmark.

| ELECTION STUDY NOTES - NEW ZEALAND (2023): F3002_3

| Collaborators fielded two items on radio consumption: One item
 | pertaining to public radio (Radio New Zealand National) and
 | a second one referring to private radio broadcasters (such as
 | Newstalk ZB). F3002_3 reports public radio usage.

 F3002_6_2 >>> Q02g. MEDIA USAGE: SOCIAL MEDIA - PER DAY

Q02g. And how often during a typical day did you use social media
 such as Facebook, Twitter, or WhatsApp to follow news about
 parties and candidates - only about once per day, several
 times per day, or at least ten times per day?

-
- 1. ONLY ABOUT ONCE PER DAY
 - 2. SEVERAL TIMES PER DAY
 - 3. AT LEAST TEN TIMES PER DAY

 - 7. VOLUNTEERED: REFUSED
 - 8. VOLUNTEERED: DON'T KNOW

9. MISSING

| CSES QUESTION CLASSIFICATION: MODULE THEME

| Data are unavailable for SLOVAKIA (2023).

| VARIABLE NOTES: F3002_6_2

| Respondents' daily social media consumption in F3002_6_2
 | should have only been asked for those respondents who reported
 | to have followed news on social media about parties and
 | candidates on seven days in a typical week during the election
 | campaign (F3002_6_1 = 7).

| ELECTION STUDY NOTES - NEW ZEALAND (2023): F3002_6_2

| The question wording for F3002_6_2 deviates from the CSES MODULE
 | 6 standards. Specifically, the New Zealand 2023 study included an
 | additional category not envisaged by CSES, offering respondents
 | to state they did not use social media to follow news about
 | parties and candidates at all. The 500 respondents selecting
 | that option were classified as "9. MISSING" for CSES:

CSES Code	Election Study Code/Category
01.	About once a day
02.	Several times a day
03.	At least 10 times
08.	Don't know
09.	Not at all
	Missing

| Additionally, researchers are advised that respondents answered
 | to F3002_6_1 inconsistently. Most notably, 72 respondents
 | specified to consume news about parties and candidates at
 | least once a day on social media in F3002_6_2, although they
 | stated not to have used social media to follow news during the
 | election campaign in F3002_6_1. As the New Zealand survey was
 | entirely self-administered, collaborators assume respondents had
 | challenges navigating skip patterns as envisaged. Data remain
 | unchanged.

 F3003 >>> Q03. INTERNAL EFFICACY

Q03. Please tell me whether you strongly agree, somewhat agree,
 neither agree nor disagree, somewhat disagree, or strongly
 disagree with each of the following statements:

You feel you understand the most important political issues
 of this country.

-
1. STRONGLY AGREE
 2. SOMEWHAT AGREE
 3. NEITHER AGREE NOR DISAGREE
 4. SOMEWHAT DISAGREE
 5. STRONGLY DISAGREE

 7. VOLUNTEERED: REFUSED
 8. VOLUNTEERED: DON'T KNOW

9. MISSING

CSES QUESTION CLASSIFICATION: MODULE THEME

VARIABLE NOTES: F3007_

Data on F3007_3 are unavailable for FRANCE (2022).

ELECTION STUDY NOTES - AUSTRALIA (2022): F3007_

The wording of one answer category offered to respondents deviated slightly from CSES MODULE 6 standards. The category was as follows:

CSES Code	Election Study Code/Category
-----------	------------------------------

01.	Trust completely
-----	------------------

ELECTION STUDY NOTES - AUSTRIA (2024): F3007_

The 2024 Austrian election study asked respondents to rate their trust on an 11-point scale. Hence, the answer categories offered to respondents deviated from CSES MODULE 6 standards with response options ranging from 1 to 4. The 11-point scale runs from "0. Don't trust at all" to "10. Completely trust". The categories were assigned as listed below. Please note that the middle category 5 was assigned to "6. [SEE ELECTION STUDY NOTES]". This gives users the flexibility to decide whether to include or exclude these respondents, and how to recode them accordingly.

CSES Code	Election Study Code/Category
-----------	------------------------------

01.	Codes 8 to 10
02.	Codes 6 to 7
03.	Codes 3 to 4
04.	Codes 0 to 2
06.	Code 5

F3008_1 >>> Q08a. GOVERNMENT PERFORMANCE: GENERAL

Q08a. Now thinking about the performance of the [government in [CAPITAL]/President] in general, how good or bad a job do you think the [government/President in [CAPITAL]] did over the past [NUMBER OF YEARS SINCE LAST GOVERNMENT TOOK OFFICE, BEFORE THE CURRENT ELECTION] years? Has [it/he/she] done a very good job? A good job? A bad job? A very bad job?

1. VERY GOOD JOB
2. GOOD JOB
3. BAD JOB
4. VERY BAD JOB
6. [SEE ELECTION STUDY NOTES]
7. VOLUNTEERED: REFUSED

05.	Got a lot worse

F3010_ME >>> MAIN ELECTION - CSES CLASSIFICATION

Current main election as classified by CSES.

0. LOWER HOUSE - PARTY LIST
1. LOWER HOUSE - DISTRICT CANDIDATE
2. PRESIDENT - FIRST ROUND
3. PRESIDENT - SECOND ROUND
4. UPPER HOUSE - PARTY LIST
5. UPPER HOUSE - DISTRICT CANDIDATE

| VARIABLE NOTES: F3010_ME

| F3010_ME details the type of election classified as the main

| election by CSES.

| CSES classifies the main election based on the regime
 | (executive) type and the election in which the CSES survey has
 | been administered. For polities rated as parliamentary systems,
 | CSES classifies the main election as elections to the lower house
 | for most studies. It deviates for a few cases when elections to
 | the upper house constitute the main election, usually due to the
 | respective CSES study focusing on the upper house contest.
 | For polities rated as Presidential systems, CSES conventionally
 | classifies the main election as the Presidential election. It
 | sometimes deviates when data for the Presidential election is
 | unavailable (e.g., when the CSES survey was administered in a
 | midterm election). For polities rated as mixed systems, CSES
 | has tended to classify the main election as elections to the
 | lower house. However, it sometimes deviates depending on data
 | availability. Users are advised to consult the table below
 | specifying the main election for each study in CSES for specific
 | details.

| +++ TABLE: ELECTION STUDIES BY TYPE OF MAIN ELECTION

POLITY (ELEC YEAR)	Presidential Election	Lower House Election	Upper House Election
-----	-----	-----	-----

UNITED STATES (2024)	X	-	-
-----	-----	-----	-----

| Researchers are advised that the classification in F3010_ME is
 | used to code the following derivative variables in CSES MODULE 6,
 | all pertaining to the main election:

- | - Turnout: main election (F3010)
- | - Turnout switcher between the current election and the
 | previous election (F3010_TS)
- | - First-time voter in the current main election (F3010_FTV)
- | - Current main election: vote choice - outgoing government
 | (Incumbent) (F3011_OUTGOV)

- | - Vote switcher between the current election and the previous election (F3011_VS_1)
- | - Current main election - vote for Leftist/Center/Rightist - CSES (F3011_LR_CSES)
- | - Current main election - vote for Leftist/Rightist (Rile) - MARPOR/CMP (F3011_LR_MARPOR)
- | - Current main election - vote choice by ideological family classification - CSES (F3011_IF_CSES)
- | - Current main election - vote choice linked with CSES Collaborator expert judgment L-R (F3100_LR_CSES)
- | - Current main election - vote choice linked with MARPOR/CMP Rile (F3100_LR_MARPOR)
- | - Current main election - vote choice linked with CSES Collaborator expert judgment on populism (F3100_POP_CSES)
- | - Current main election - vote choice linked with CSES Collaborator expert judgment of ideological family (F3100_IF_CSES)

F3010 >>> TURNOUT: MAIN ELECTION

Whether or not the respondent cast a ballot in the main election.
.....

- 0. RESPONDENT DID NOT CAST A BALLOT
- 1. RESPONDENT CAST A BALLOT
- 93. VOLUNTEERED: RESPONDENT NOT REGISTERED ON ELECTORAL
LISTS [IF APPLICABLE]
- 97. VOLUNTEERED: REFUSED
- 98. VOLUNTEERED: DON'T KNOW
- 99. MISSING

| CSES QUESTION CLASSIFICATION: CORE

| VARIABLE NOTES: F3010

| F3010 ascertains whether or not the respondent cast a ballot
| in the main election, regardless of whether or not it was valid.
| The wording of this item, which is to record voting in the
| national election, follows national standards.

| In case of a single election taking place, e.g., a lower house
| election only, F3010 reports the turnout decision for that
| particular election. In cases where multiple elections took
| place, e.g., a Presidential and a lower house election, F3010
| reports the turnout decision in the main election.

| CSES classifies the main election based on the regime
| (executive) type and the election in which the CSES survey has

| been administered. For polities rated as parliamentary systems,
 | CSES classifies the main election as elections to the lower house
 | for most studies. It deviates for a few cases when elections to
 | the upper house constitute the main election, usually due to the
 | respective CSES study focusing on the upper house contest.
 | For polities rated as Presidential systems, CSES conventionally
 | classifies the main election as the Presidential election. It
 | sometimes deviates when data for the Presidential election is
 | unavailable (e.g., when the CSES survey was administered in a
 | midterm election). For polities rated as mixed systems, CSES
 | has tended to classify the main election as elections to the
 | lower house. However, it sometimes deviates depending on data
 | availability. Users are advised to consult the VARIABLE NOTES of
 | "F3010_ME" for more detailed specifications of the main election
 | for each study in CSES.

 F3010_PR_1 >>> Q10P1-a. CURRENT PRESIDENTIAL ELECTION: DID RESPONDENT CAST
 A BALLOT - 1ST ROUND

Whether or not the respondent cast a ballot in the first round of
 the Presidential elections.

.....

- 0. RESPONDENT DID NOT CAST A BALLOT
- 1. RESPONDENT CAST A BALLOT
- 93. VOLUNTEERED: RESPONDENT NOT REGISTERED ON ELECTORAL
 LISTS / NOT ELIGIBLE [IF APPLICABLE]
- 95. NOT APPLICABLE: NO ROLE OF PRESIDENT
- 96. NOT APPLICABLE: NO PRESIDENTIAL ELECTIONS
- 97. VOLUNTEERED: REFUSED
- 98. VOLUNTEERED: DON'T KNOW
- 99. MISSING

| CSES QUESTION CLASSIFICATION: CORE

| VARIABLE NOTES: F3010_PR_1

| F3010_PR_1 ascertains whether or not the respondent cast a ballot
 | in the first round of the Presidential elections, regardless of
 | whether or not it was valid. Hence, F3010_PR_1 details reported
 | turnout, irrespective of whether respondents voted on election
 | day or participated in early/advance voting.

| The wording of F3010_PR_1, which is to record voting in the
 | national election, follows national standards.

| ELECTION STUDY NOTES - BRAZIL (2022): F3010_PR_1

| The question of whether respondents voted in the "first round"
| of the current election did not differentiate between the
| Presidential, lower house and upper house elections. Since
| voting is compulsory, it can be assumed that most persons who
| answered "yes" voted in all of the elections, and those who
| answered "no" did not vote in any of the elections, which took
| place simultaneously. Furthermore, there were different kinds of
| "no" answers in the original dataset which showed why
| respondents did not vote. These values were recoded as follows:

CSES Code	Election Study Code/Category

0.	No, more than 70 years old (voluntary) No, 16-17 years old (voluntary) No, showed justification in the first round Neither voted nor showed justification at first round
1.	No, didn't have the necessary documentation Yes, voted

| ELECTION STUDY NOTES - NORTH MACEDONIA (2024): F3010_PR_

| For the North Macedonian 2024 Presidential elections, turnout in
| the sample is significantly higher than reported in official
| election results.
| Apart from social desirability, collaborators advise that
| the electoral roll in North Macedonia is subject to long-standing
| inconsistencies: The number of registered voters significantly
| exceeds the resident population, as the electoral roll covers a
| considerable number of expatriates and sometimes even deceased
| persons. For that reason, the North Macedonian 2024 study is
| based on the domicile population rather than the electoral roll.
| Collaborators further note that surveys in North Macedonia
| typically overreport turnout, suggesting systemic issues with
| the Electoral Roll as one explanation for this finding.

| Furthermore, researchers are advised that 23 respondents stated
| they had not been registered to vote for the first round of the
| 2024 Presidential elections, although voter registration is
| conducted automatically in North Macedonia. The same applies to
| 14 respondents for the second round, respectively.
| Collaborators provide three possible explanations for this
| anomaly:
| (1) misreporting by respondents, likely due to discomfort with
| disclosing voting status;
| (2) interviewer coding errors;
| (3) inclusion of individuals without an ID - legally eligible to
| vote but unable to do so in practice due to a lack of
| documents.
| Following the collaborators' advice, the affected 23 respondents
| in F3010_PR_1 and 14 respondents in F3010_PR_2 have been recoded
| to missing, respectively.

 F3010_PR_2 >>> Q10P2-a. CURRENT PRESIDENTIAL ELECTION: DID RESPONDENT CAST
 A BALLOT - 2ND ROUND

Whether or not the respondent cast a ballot in the second round
 of the Presidential elections.

.....

- 0. RESPONDENT DID NOT CAST A BALLOT/WILL NOT CAST A BALLOT
- 1. RESPONDENT CAST A BALLOT/WILL CAST A BALLOT

93. VOLUNTEERED: RESPONDENT NOT REGISTERED ON ELECTORAL
 LISTS / NOT ELIGIBLE [IF APPLICABLE]

95. NOT APPLICABLE: NO ROLE OF PRESIDENT

96. NOT APPLICABLE: NO PRESIDENTIAL ELECTIONS/
 NO SECOND ROUND

97. VOLUNTEERED: REFUSED

98. VOLUNTEERED: DON'T KNOW

99. MISSING

| CSES QUESTION CLASSIFICATION: CORE

| VARIABLE NOTES: F3010_PR_2

| F3010_PR_2 ascertains whether or not the respondent cast a ballot
 | in the second round of the Presidential elections, regardless of
 | whether or not it was valid. Hence, F3010_PR_2 details reported
 | turnout, irrespective of whether respondents voted on election
 | day or participated in early/advance voting.

| The wording of F3010_PR_2, which is to record voting in the
 | national election, follows national standards.

| ELECTION STUDY NOTES - NORTH MACEDONIA (2024): F3010_PR_

| For the North Macedonian 2024 Presidential elections, turnout in
 | the sample is significantly higher than reported in official
 | election results.

| Apart from social desirability, collaborators advise that
 | the electoral roll in North Macedonia is subject to long-standing
 | inconsistencies: The number of registered voters significantly
 | exceeds the resident population, as the electoral roll covers a
 | considerable number of expatriates and sometimes even deceased
 | persons. For that reason, the North Macedonian 2024 study is
 | based on the domicile population rather than the electoral roll.
 | Collaborators further note that surveys in North Macedonia
 | typically overreport turnout, suggesting systemic issues with

| national election, follows national standards.

| ELECTION STUDY NOTES - BRAZIL (2022): F3010_LH

| The question of whether respondents voted in the "first round" of the current election did not differentiate between the Presidential, lower house and upper house elections. Since voting is compulsory, it can be assumed that most persons who answered "yes" voted in all of the elections, and those who answered "no" did not vote in any of the elections, which took place simultaneously. Furthermore, there were different kinds of "no" answers in the original dataset which showed why respondents did not vote. These values were recoded as follows:

CSES Code	Election Study Code/Category
0.	No, more than 70 years old (voluntary) No, 16-17 years old (voluntary) No, showed justification in the first round Neither voted nor showed justification at first round No, didn't have the necessary documentation
1.	Yes, voted

| ELECTION STUDY NOTES - NEW ZEALAND (2023): F3010_LH

| In the New Zealand (2023) study, collaborators assessed turnout by a multiple-choice question. Respondents were asked to mark as many answers as applied among the following categories:

- | - "Cast a party vote" (i.e., party-list vote)
- | - "Cast an electorate vote" (i.e., district-candidate vote)
- | - "Cast a blank or invalid vote"
- | - "Chose not to vote"
- | - "Didn't manage to vote"

| For F3010_LH, respondents were classified as voters if they stated to have cast a party vote, an electorate vote, or a blank or invalid vote, or a combination of the three.

| ELECTION STUDY NOTES - NORTH MACEDONIA (2024): F3010_LH

| For the North Macedonian 2024 legislative elections, turnout in the sample is significantly higher than reported in official election results.

| Apart from social desirability, collaborators advise that the electoral roll in North Macedonia is subject to long-standing inconsistencies: The number of registered voters significantly exceeds the resident population, as the electoral roll covers a considerable number of expatriates and sometimes even deceased persons. For that reason, the North Macedonian 2024 study is based on the domicile population rather than the electoral roll. Collaborators further note that surveys in North Macedonia typically overreport turnout, suggesting systemic issues with the Electoral Roll as one explanation for this finding.

Furthermore, researchers are advised that 25 respondents stated they had not been registered to vote for the lower house election, although voter registration is conducted automatically in North Macedonia. Collaborators provide three possible explanations for this anomaly:

- (1) misreporting by respondents, likely due to discomfort with disclosing voting status;
- (2) interviewer coding errors;
- (3) inclusion of individuals without an ID - legally eligible to vote but unable to do so in practice due to a lack of documents.

Following the collaborators' advice, the affected 25 respondents in F3010_LH have been recoded to missing.

ELECTION STUDY NOTES - SLOVAKIA (2023): F3010_LH

Researchers are advised that 10 respondents stated they had not been registered to vote for the lower house election. Collaborators note that the respective voters might not have been registered due to various potential administrative lapses. In Slovakia, electoral registers are derived from population registers, covering voting-age eligible citizens with permanent residence in a respective municipality. Persons might have been erroneously omitted from the electoral register in case of recent changes in place of residence, recent changes in the surname due to marriage, etc. Hence, data in F3010_LH remain unchanged.

ELECTION STUDY NOTES - TAIWAN (2024): F3010_LH

Five respondents state to have not been registered for the lower house election, although they voted in the Presidential contest. Collaborators note that citizens need to be registered in a respective district for at least four months to cast a district candidate vote for the lower house. Hence, due to internal migration, some individuals may not meet the four-month residency requirement for the district election, and are thus ineligible to vote in that race.

F3010_UH >>> Q10UH-a. CURRENT UPPER HOUSE ELECTION: DID RESPONDENT CAST A BALLOT

Whether or not the respondent cast a ballot in the upper house election.

0. RESPONDENT DID NOT CAST A BALLOT

1. RESPONDENT CAST A BALLOT

93. VOLUNTEERED: RESPONDENT NOT REGISTERED ON ELECTORAL LISTS/NOT ELIGIBLE [IF APPLICABLE]

- 95. NOT APPLICABLE: UNICAMERAL SYSTEM
- 96. NOT APPLICABLE: NO UPPER HOUSE ELECTION
- 97. VOLUNTEERED: REFUSED
- 98. VOLUNTEERED: DON'T KNOW
- 99. MISSING

| CSES QUESTION CLASSIFICATION: CORE

| VARIABLE NOTES: F3010_UH

| F3010_UH ascertains whether or not the respondent cast a ballot in the upper house election, regardless of whether or not it was valid. Hence, F3010_UH details reported turnout, irrespective of whether respondents voted on election day or participated in early/advance voting.

| The wording of F3010_UH, which is to record voting in the national election, follows national standards.

| ELECTION STUDY NOTES - BRAZIL (2022): F3010_UH

| The question of whether respondents voted in the "first round" of the current election did not differentiate between the Presidential, lower house and upper house elections. Since voting is compulsory, it can be assumed that most persons who answered "yes" voted in all of the elections, and those who answered "no" did not vote in any of the elections, which took place simultaneously. Furthermore, there were different kinds of "no" answers in the original dataset which showed why respondents did not vote. These values were recoded as follows:

CSES Code	Election Study Code/Category
0.	No, more than 70 years old (voluntary) No, 16-17 years old (voluntary) No, showed justification in the first round Neither voted nor showed justification at first round No, didn't have the necessary documentation
1.	Yes, voted

| ELECTION STUDY NOTES - SWITZERLAND (2023): F3010_UH

| F3010_UH includes 314 respondents coded as missing. These include respondents from the cantons of Obwald (N=109) and Appenzell Innerrhoden (N=109), who did not receive the question because a) in Obwald, a "silent election" took place (only 1 candidate), and b) upper house elections in Appenzell Innerrhoden took place at the Landsgemeinde in April before the federal election.

 F3010_TS >>> TURNOUT SWITCHER BETWEEN CURRENT ELECTION AND
 PREVIOUS ELECTION

Whether or not the respondent reports voting in the current and
 previous election.

.....

- 0. RESPONDENT ABSTAINED IN BOTH ELECTIONS
- 1. RESPONDENT ABSTAINED IN CURRENT ELECTION BUT VOTED IN
 PREVIOUS ELECTION
- 2. RESPONDENT VOTED IN CURRENT ELECTION BUT ABSTAINED IN
 PREVIOUS ELECTION
- 3. RESPONDENT VOTED IN BOTH CURRENT AND PREVIOUS ELECTION
- 5. RESPONDENT ABSTAINED IN CURRENT ELECTION BUT INELIGIBLE
 TO VOTE IN PREVIOUS ELECTION
- 6. RESPONDENT VOTED IN CURRENT ELECTION BUT INELIGIBLE TO VOTE
 IN PREVIOUS ELECTION
- 9. MISSING

| CSES QUESTION CLASSIFICATION: DERIVATIVE VARIABLE (BASED ON CORE)

| VARIABLE NOTES: F3010_TS

| F3010_TS is constructed based on the respondent's reported
 | turnout in the current and previous main elections.
 | In polities where multiple elections took place simultaneously,
 | F3010_TS reports the turnout decision in the main election.
 | The classifications of the main election by election study are
 | listed in the variable notes for variable F3010_ME.

| CSES classifies the main election based on the regime
 | (executive) type and the election in which the CSES survey has
 | been administered. For polities rated as parliamentary systems,
 | CSES classifies the main election as elections to the lower house
 | for most studies. It deviates for a few cases when elections to
 | the upper house constitute the main election, usually due to the
 | respective CSES study focusing on the upper house contest.
 | For polities rated as Presidential systems, CSES conventionally
 | classifies the main election as the Presidential election. It
 | sometimes deviates when data for the Presidential election is
 | unavailable (e.g., when the CSES survey was administered in a
 | midterm election). For polities rated as mixed systems, CSES
 | has tended to classify the main election as elections to the
 | lower house. However, it sometimes deviates depending on data
 | availability. Users are advised to consult the table listed in
 | VARIABLE NOTES for F3010_ME specifying the main election for
 | each study in CSES for specific details.

|
 | In instances when the previous turnout refers to a different type
 | of election, e.g., current main elections are Presidential but
 | the previous turnout variable refers to the lower house election
 | only, these studies are set to missing for F3010_TS.

 F3010_FTV >>> FIRST-TIME VOTER IN CURRENT MAIN ELECTION

Whether or not the respondent is a first-time voter in the current
 main election.

.....

- 0. R IS NOT A FIRST-TIME VOTER IN CURRENT MAIN ELECTION
- 1. R IS A FIRST-TIME VOTER IN CURRENT MAIN ELECTION
- 6. NOT ASCERTAINABLE [SEE VARIABLE NOTES]
- 9. MISSING

| CSES QUESTION CLASSIFICATION: DERIVATIVE VARIABLE (BASED ON CORE)

| VARIABLE NOTES: F3010_FTV

| F3010_FTV ascertains whether or not the respondent is a
 | first-time voter in the current main election.
 | Following the ACE Electoral Knowledge Network, CSES defines
 | first-time voters as "those young people who are reaching voting
 | age and therefore are facing their first opportunity to vote"
 | in the main election.
 | (see <https://aceproject.org/ace-en/topics/ve/vee/vee05/vee05h>,
 | Date accessed: April 02, 2024).

| Consequently, F3010_FTV classifies observations as first time
 | voters based on respondent age (variable F2001_Y).

| Respondents are classified as "1. R IS A FIRST-TIME VOTER" if
 | they attained voting age between the dates of the previous and
 | current main election.
 | Respondents who were eligible at the preceding main election are
 | coded "0. R IS NOT A FIRST-TIME VOTER".

| As CSES collects respondents' year and month of birth only (for
 | further information see VARIABLE NOTES for F2001_Y), there are a
 | few instances in the dataset that could not be classified based
 | on the above definition and are hence coded "6. NOT
 | ASCERTAINABLE". This applies to the following observations:
 | - Respondents who reached voting age in the month of the
 | previous main election.
 | - Respondents who reached voting age in the year of the previous
 | main election and for whom data on the month of birth is

| unavailable.

| Data are coded "9. MISSING" primarily in instances where
| respondents' year of birth (F2001_Y) is unavailable.

| In polities where multiple elections took place simultaneously,
| this variable classifies first-time voters based on the main
| election. The classifications of the main elections by election
| study are listed in the VARIABLE NOTES for variable F3010_ME.

| CSES classifies the main election based on the regime
| (executive) type and the election in which the CSES survey has
| been administered. For polities rated as parliamentary systems,
| CSES classifies the main election as elections to the lower house
| for most studies. It deviates for a few cases when elections to
| the upper house constitute the main election, usually due to the
| respective CSES study focusing on the upper house contest.
| For polities rated as Presidential systems, CSES conventionally
| classifies the main election as the Presidential election. It
| sometimes deviates when data for the Presidential election is
| unavailable (e.g., when the CSES survey was administered in a
| midterm election). For polities rated as mixed systems, CSES
| has tended to classify the main election as elections to the
| lower house. However, it sometimes deviates depending on data
| availability. Users are advised to consult the table listed in
| VARIABLE NOTES for F3010_ME specifying the main election for
| each study in CSES for specific details.

| Data are unavailable for FRANCE (2022).

F3011_PR_1 >>> Q10P1-b. CURRENT PRESIDENTIAL ELECTION: VOTE CHOICE - 1ST
 ROUND

Respondent's vote choice for President in the first round of
election.

000001-999987. [SEE PART 3 OF CODEBOOK FOR NUMERICAL PARTY/
 COALITION CODES]

999988. NONE OF THE CANDIDATES

999989. INDEPENDENT CANDIDATE

999996. NOT APPLICABLE: NO LOWER HOUSE ELECTION

999997. VOLUNTEERED: REFUSED

999998. VOLUNTEERED: DON'T KNOW

999999. MISSING/ABSTAINED (DID NOT VOTE)

| CSES QUESTION CLASSIFICATION: CORE

| VARIABLE NOTES: F3011_LH_PL

| F3011_LH_PL details the respondent's vote choice for party list in Lower House elections, if applicable and a respondent cast a ballot in the Lower House legislative election. Hence, F3011_LH_PL details reported vote choice, irrespective of whether respondents voted on election day or participated in early/advance voting.

| If more than one candidate have one party's affiliation, Collaborators were advised to provide vote choice for individual candidates. For preferential voting systems, Collaborators were asked to provide the first two preferences (Q10LH-c1 and Q10LH-c2).

| Parties/coalitions and their numerical and alphabetical classifications for each election study are detailed in Part 3 of the CSES Codebook.

| Respondents who mentioned not casting a ballot in the current lower house election (F3010_LH) but report a vote choice are included, as it is not possible to identify why this inconsistency occurred. Users may identify these cases by cross-tabulating F3010_LH and F3011_LH_PL in their statistical software.

| ELECTION STUDY NOTES - BRAZIL (2022): F3011_LH_PL

| Members of Brazil's lower house, the Chamber of Deputies, are elected from 27 multi-member districts by open list proportional representation.

| Collaborators assessed vote choice for the lower house with an open-ended question, reading as: "Who did you vote for federal deputy in this election?". Interviewers were instructed to document all the details the interviewee remembered about their vote choice, such as the candidate's name and party affiliation. This information was categorized by collaborators and used to code F3011_LH_PL.

| In classifying open-ended respondent answers, collaborators identified some incomplete or erroneous information, such as voters claiming to have voted for a candidate who either wasn't registered or contested for a different office not related to the lower house. These instances were coded as follows:

CSES Code	Election Study Code/Category
-----------	------------------------------

999992.	Voted for a candidate who contested a different
---------	---

	office (other than lower house MP)
	Voted for a candidate not registered with the
	Superior Electoral Court (TSE)
	Voter in another state
	999993. Invalid ballot
	Blank ballot

| ELECTION STUDY NOTES - PORTUGAL (2024): F3011_LH_PL

| Code 620101 refers to the Democratic Alliance.

| ELECTION STUDY NOTES - SWEDEN (2022): F3011_LH_PL

| Researchers are advised that the Social Democratic Party (SAP, PARTY A) fared slightly better in the sample than expected given official election results. At the same time, the Sweden Democrats (SD, PARTY B) did worse in the sample than in the actual election.

| Collaborators note that the underrepresentation of Sweden Democrat voters has been a common outcome for surveys in Sweden for the last decade or so. One potential explanation for this phenomenon is voters' unwillingness to admit having voted for the Sweden Democrats (stigma effect, see Lindskog et al. 2024), while another explanation stipulates a reluctance of Sweden Democrat voters to participate in surveys due to a low level of trust in political and public institutions. See Lindskog, H., S. Dahlberg, R. Ohrvall, and H. Oscarsson. 2024. "The Voter Next Door: Stigma Effects on Advance Voting for Radical Right Parties". Political Studies 72(4): 1591-1608. DOI: 10.1177/00323217231216305

| ELECTION STUDY NOTES - SWITZERLAND (2023): F3011_LH_PL

| In Switzerland, there are many small leftist parties. All of them are minor parties, which gather less than 1-2% of the national vote share. These are all independent parties, running only in some cantons. But because they belong to the same party family, the Swiss election study collapsed them into a single category in their questionnaires "AL - Alternative / Sol - Solidarites / MPS - Movimento per il socialismo". Within the CSES, these parties are classified as "999990. OTHER LEFT WING CANDIDATE/PARTY".

| Further, several respondents said that they "voted for persons, not parties" or that they "voted for several parties". These answers result from the peculiarities of the Swiss electoral system, which provides voters with many different options to express preference votes. For instance, the Swiss electoral system allows voters to select a blank list and fill in the names of candidates. Respondents who reported "voted for persons, not parties" presumably did so by taking a blank list and writing in candidates they liked without knowing or caring which party these candidates represent. This means they could vote for candidates from different parties. This is also possible when voters take a party list but modify it by crossing

| out some candidates and replacing them with candidates from
 | another party (panachage). In such cases, they might end up
 | voting for an equal number of candidates from different parties.
 | The survey asked respondents to indicate the party from which
 | they voted for the most candidates. However, many respondents
 | instead wrote in an open field that they "voted for several
 | parties" without specifying which ones. Based on national
 | collaborators' recommendation, both cases are coded "999992.
 | OTHER CANDIDATE/PARTY (NOT FURTHER SPECIFIED)".

CSES Code	Election Study Code/Category
999990.	AL - Alternative / Sol - Solidarites / MPS - Movimento per il socialismo
999992.	Voted for persons, not parties Voted for several parties

| ELECTION STUDY NOTES - TURKIYE (2023): F3011_LH_PL

| Three respondents with respondent IDs 792020230000000212,
 | 792020230000000651, and 792020230000001244 in F1003_1 stated to
 | have voted for the Felicity Party (SP) in F3011_LH_PL. However,
 | the Felicity Party did not contest in the 2023 election, but
 | had candidates running on the list of the Republican People's
 | Party (CHP, PARTY B, NUMERICAL CODE 792002). Consequently, the
 | three respondents voting for the SP were recoded to 792002 in
 | F3011_LH_PL.

 F3011_LH_DC >>> Q10LH-c. CURRENT LOWER HOUSE ELECTION: VOTE CHOICE -

98. VOLUNTEERED: DON'T KNOW
99. MISSING

| CSES QUESTION CLASSIFICATION: CORE

| VARIABLE NOTES: F3011_LH_PF

| For more detailed information on how CSES codes parties/coalitions, please see Part 3 of the CSES Codebook.

| There are two different types of preference vote. The first is associated with open PR-List systems. These systems allow citizens to vote for a party list and to mark a "preference" for one or more candidates within the party list. In these systems, this type of vote is known as a preference vote (or a candidate vote). The second is associated with STV and AV systems, where citizens rank-order candidates in descending order of their preference. In these systems, a distinction is made between a voter's first preference (i.e., who voters allocate their "number 1" preference to) and their subsequent lower preferences. These latter preferences (i.e., all the voter's preferences aside from their first preference) are also known as preference votes. We distinguish between these two different types of preference votes in the above categorization.

| In party list systems, the question asked of respondents should read like this:

| "Did you simply vote for a party or did you also express a candidate preference?"

| In party list systems where voters have to vote directly for a candidate and cannot cast a vote for the party list only (e.g., Estonia, Finland, and Poland), the question asked of respondents should read like this:

| "Do you consider the vote that you cast merely a vote for the party, or did you also mean it as a vote for a particular candidate?"

| In STV/AV systems, the question asked of respondents should be akin to this:

| "Which of the parties/candidates did you give your preference vote to?"

| or

| "To whom did you give your second (or lower) preference vote to?"

| Respondents who mentioned not casting a ballot in the current lower house election (F3010_LH) but reported a preference vote are included, as it is not possible to identify why this inconsistency occurred. Users may identify these cases by cross-tabulating F3010_LH and F3011_LH_PF in their statistical software.

| ELECTION STUDY NOTES - AUSTRALIA (2022): F3011_LH_PF

| For lower house elections, Australia employs the Alternative Vote system. In this system, voters are required to list their

| preferences for as many candidates as there are on the ballot.
 | Consequently, as preference votes are mandatory, all respondents
 | who turned out to vote according to F3011_LH were classified as
 | having cast a preference vote in F3011_LH_PF.

| ELECTION STUDY NOTES - BRAZIL (2022): F3011_LH_PF

| Members of Brazil's lower house, the Chamber of Deputies, are
 | elected from 27 multi-member districts by open list proportional
 | representation.
 | Collaborators assessed vote choice for the lower house with an
 | open-ended question (see F3011_LH_PL for details).
 | For F3011_LH_PF, respondents who specified a valid vote for a
 | particular candidate in F3011_LH_PL were classified as
 | "1. RESPONDENT CAST PREFERENCE VOTE IN PR-LIST SYSTEM" in
 | F3011_LH_PF. Respondents only providing the name of a party or
 | a name of a candidate not contesting for the lower house were
 | classified as not having cast a preference vote in F3011_LH_PF.

 F3011_UH_PL >>> Q10UH-b. CURRENT UPPER HOUSE ELECTION: VOTE CHOICE -

| VARIABLE NOTES: F3011_UH_DC_

| F3011_UH_DC_ detail the respondent's vote choice for district
| candidate/s in Upper House elections, if applicable and a
| respondent cast a ballot in the Upper House legislative election.
| Hence, F3011_UH_DC_ detail reported vote choice, irrespective of
| whether respondents voted on election day or participated in
| early/advance voting.

| Parties/coalitions and their numerical and alphabetical
| classifications for each election study are detailed in Part 3
| of the CSES Codebook.

ELECTION STUDY NOTES - BRAZIL (2022): F3011_UH_DC_

Members of the Brazilian Senate (Senado Federal) serve a term of eight years and are elected in alternative electoral cycles. Each of Brazil's federative units (N = 27) has three Senators, such that the total N of seats is 81 (27 x 3). Two thirds of the seats (N = 54) are contested in one electoral cycle, while the remaining one-third are contested in the other. As the 2022 elections saw one-third of the seats contested, voters had one vote in this election as one Senator per State was being selected. This vote is coded in F3011_UH_DC_1. However, as the previous 2018 election had two seats contested per state, voters had two votes in the previous upper house elections, coded in F3016_UH_DC_1 and F3016_UH_DC_2.

ELECTION STUDY NOTES - POLAND (2023): F3011_UH_DC_1

Of the five alliances forming for the 2023 Polish lower house election (see Codebook Part 3 for details), two participated in the 2023 Senate election as well, namely, United Right (NUMERICAL CODE 616001) headed by Law and Justice (PiS, PARTY A), and Confederation Liberty and Independence (Konfederacja, NUMERICAL CODE 616006, PARTY F). The remaining three alliances formed the Senate Pact 2023 coalition for the upper house election, i.e., member parties of the Civic Coalition (KO, NUMERICAL CODE 616002), Third Way (TD, NUMERICAL CODE 616003), and the Left (NUMERICAL CODE 616004) alliances, together with Yes! For Poland (T!DPL).

Collaborators assessed vote choice for the current upper house election with two consecutive questions. In the first question, respondents were asked to provide their vote choice based on the alliance structures outlined above. Voters of the Senate Pact 2023 received a follow-up question, asking them to specify the party affiliation of the candidate they voted for (i.e., whether the candidate was affiliated with the Civic Coalition, Third Way, or the Left).

F3011_UH_DC_1 combines answers from both questions. If voters provided details on a candidate's affiliation in the follow-up question, that information was used for F3011_UH_DC_1. All other voters of the Senate Pact 2023 are classified in NUMERICAL CODE 616099. Senate Pact 2023.

CSES-Code	Election study code/category
616001.	United Right
616002.	Senate Pact 2023 - "Civic Coalition" Candidate
616003.	Senate Pact 2023 - "Third Way" Candidate
616004.	Senate Pact 2023 - "The Left" Candidate
616006.	Confederation Liberty and Independence
616009.	Nonpartisan Local Government Activists
616010.	There is One Poland
616099.	Senate Pact 2023 - not further specified

| ELECTION STUDY NOTES - SWITZERLAND (2023): F3011_UH_DC_

| In Switzerland, voters can choose up to two candidates for the
 | Council of States (the upper house). The 20 "full" cantons have
 | two seats and the six "half" cantons have only one seat in the
 | Council of States. Variable F3011_UH_DC_1 therefore represents
 | the first choice for voters who can elect two candidates, and the
 | (single) choice for voters who can only elect one candidate,
 | whereas variable F3011_UH_DC_2 represents the second choice for
 | voters in "full" cantons.

| Further, there are many small leftist parties. All of them are
 | minor parties, which gather less than 1-2% of the national vote
 | share. These are all independent parties, running only in some
 | cantons. But because they belong to the same party family, the
 | Swiss election study collapsed them into a single category in
 | their questionnaires "AL - Alternative / Sol - Solidarites / MPS
 | - Movimento per il socialismo". Within the CSES, these parties
 | as well as "EaG - LUP" and "EaG: SOL, DAL, PDT" (both contesting
 | in Geneva) are classified as "999990. OTHER LEFT-WING CANDIDATE/
 | PARTY".

 F3011_UH_PF >>> Q10UH-d. CURRENT UPPER HOUSE ELECTION: DID RESPONDENT CAST
 CANDIDATE PREFERENCE VOTE

Whether a respondent cast a preference vote in the Upper House
 elections.

-
1. RESPONDENT CAST PREFERENCE VOTE IN PR-LIST SYSTEM
 2. RESPONDENT CAST PREFERENCE VOTE IN AV/STV SYSTEM
 5. RESPONDENT DID NOT CAST PREFERENCE VOTE
 6. RESPONDENT CAST INVALID BALLOT
 95. NOT APPLICABLE: UNICAMERAL SYSTEM
 96. NOT APPLICABLE: NO UPPER HOUSE ELECTION OR PREFERENCE VOTE
SYSTEM
 97. VOLUNTEERED: REFUSED
 98. VOLUNTEERED: DON'T KNOW
 99. MISSING

| CSES QUESTION CLASSIFICATION: CORE

| VARIABLE NOTES: F3011_UH_PF

| For more detailed information on how CSES codes parties/coalitions, please see Part 3 of the CSES Codebook.

| There are two different types of preference vote. The first is associated with open PR-List systems. These systems allow citizens to vote for a party list and to mark a "preference" for one or more candidates within the party list. In these systems, this type of vote is known as a preference vote (or a candidate vote). The second is associated with STV and AV systems, where citizens rank-order candidates in descending order of their preference. In these systems, a distinction is made between a voter's first preference (i.e., who voters allocate their "number 1" preference to) and their subsequent lower preferences. These latter preferences (i.e., all the voter's preferences aside from their first preference) are also known as preference votes. We distinguish between these two different types of preference votes in the above categorization.

| In party list systems, the question asked of respondents should read like this:

| "Did you simply vote for a party or did you also express a candidate preference?"

| In party list systems where voters have to vote directly for a candidate and cannot cast a vote for the party list only (e.g., Estonia, Finland, & Poland), the question asked of respondents should read like this:

| "Do you consider the vote that you cast merely a vote for the party, or did you also mean it as a vote for a particular candidate?"

| In STV/AV systems, the question asked of respondents should be akin to this:

| "Which of the parties/candidates did you give your preference vote to?"

| or

| "To whom did you give your second (or lower) preference vote to?"

| Respondents who mentioned not casting a ballot in the current upper house election (F3010_UH) but reported a vote choice are included as it is not possible to identify why this inconsistency occurred. Users may identify these cases by cross-tabulating F3010_UH and F3011_UH_PF in their statistical software.

 F3011_OUTGOV >>> CURRENT MAIN ELECTION - VOTE CHOICE - OUTGOING
 GOVERNMENT (INCUMBENT)

Whether or not the respondent cast a ballot for the outgoing incumbent.

.....

0. DID NOT VOTE FOR THE OUTGOING GOVERNMENT (INCUMBENT)

1. VOTED FOR THE OUTGOING GOVERNMENT (INCUMBENT)

999996. NOT ASCERTAINED / INCUMBENT CANDIDATE/PARTY DID NOT CONTEST

999997. VOLUNTEERED: REFUSED

999998. VOLUNTEERED: DON'T KNOW

999999. MISSING/ABSTAINED (DID NOT VOTE)

| CSES QUESTION CLASSIFICATION: DERIVATIVE VARIABLE (BASED ON CORE)

| VARIABLE NOTES: F3011_OUTGOV

| F3011_OUTGOV ascertains whether or not the respondent cast a ballot for the outgoing incumbent, regardless of whether or not it was valid.

| In case of a single election taking place, e.g., a lower house election only, F3011_OUTGOV reports the voting decision for that particular election. In cases where multiple elections took place, e.g., a Presidential and a lower house election, F3011_OUTGOV reports the voting decision in the main election.

| CSES classifies the main election based on the regime (executive) type and the election in which the CSES survey has been administered. For polities rated as parliamentary systems, CSES classifies the main election as elections to the lower house for most studies. It deviates for a few cases when elections to the upper house constitute the main election, usually due to the respective CSES study focusing on the upper house contest. For polities rated as Presidential systems, CSES conventionally classifies the main election as the Presidential election. It sometimes deviates when data for the Presidential election is unavailable (e.g., when the CSES survey was administered in a midterm election). For polities rated as mixed systems, CSES has tended to classify the main election as elections to the lower house. However, it sometimes deviates depending on data availability. Users are advised to consult the table below specifying the main election for each study in CSES for specific details.

| In case of a Presidential election as main election, F3011_OUTGOV refers to the incumbent President and/or the incumbent President's party. In all other cases, F3011_OUTGOV refers to the party/parties which was/were part of the outgoing cabinet.

In mixed electoral systems where voters have a list vote and a district candidate vote, the list vote was used to determine if the respondent voted for the outgoing government or not.

In case of a caretaker government, e.g., after a collapse of the government, the party affiliations of its (remaining) members were used to code F3011_OUTGOV. Cabinet members without a formal party affiliation were not considered for F3011_OUTGOV.

Respondents who reported having cast an invalid ballot are coded as "0. DID NOT VOTE FOR THE OUTGOING GOVERNMENT (INCUMBENT)."

KEY: X = yes; - = no

* = Incumbent not identified - see ELECTION STUDY NOTES below.

ELECTION STUDY NOTES - BRAZIL (2022): F3011_OUTGOV

For Brazil 2022, respondents are coded as having voted for the incumbent if they voted for Jair Bolsonaro's platform, the Liberal Party (PL), in the current Presidential election. Bolsonaro contested the previous 2018 election as a candidate of the Social Liberal Party (PSL) but left the party in 2019 - joining the PL in November 2021. The PSL merged with the Democrats (DEM) to form Brazil Union (UNIAO, PARTY E) in October 2021.

ELECTION STUDY NOTES - MONTENEGRO (2023): F3011_OUTGOV

For Montenegro 2023, F3011_OUTGOV classifies vote for the

incumbent government at the 2023 election, that is, votes for parties holding ministries in Dritan Abazovic's cabinet. After Zdravko Krivokapic, Prime Minister since the previous 2020 legislative elections, was ousted in a motion of no confidence in February 2022, the Montenegrin parliament elected Abazovic (URA) as Prime Minister in April of the same year. However, Abazovic lost a motion of confidence himself after less than four months in office on August 20, 2022. He remained acting Prime Minister until the 2023 elections, with the following parties holding posts in his cabinet ahead of the election:

- United Reform Action (URA, PARTY D, NUMERICAL CODE 499004)
- Democrats (PARTY I, NUMERICAL CODE 499099)
- Bosniak Party (BS, PARTY E, NUMERICAL CODE 499005)
- Socialist People's Party (SNP, PARTY F, NUMERICAL CODE 499006)
- Croatian Civic Initiative (HGI, NUMERICAL CODE 499012)

Voters for any of these parties or their associated electoral coalitions for the 2023 election are classified as having voted for the incumbent government. However, researchers are advised that the SNP (PARTY F) participated in an electoral coalition with the Democratic Alliance (DEMOS, NUMERICAL CODE 499016) in the 2023 election. DEMOS did not hold any government portfolio in the outgoing government.

Further, the Albanian Alternative (AA) held one ministry before the 2023 election. As none of the respondents indicated to have voted for the AA's electoral coalition, the Albanian Forum, in the current election, that incumbent party is disregarded for F3011_OUTGOV.

ELECTION STUDY NOTES - NORTH MACEDONIA (2024): F3011_OUTGOV

In North Macedonia, a technical government was sworn in on January 28, 2024, 100 days ahead of election day. The transitional government, headed by Talat Xhaferi (DUI, PARTY C), the country's first ethnic Albanian Prime Minister, was mainly tasked with administering the upcoming parliamentary elections.

The tradition of setting up a provisional government ahead of elections dates back to the 2015 Przino Agreement, which followed a political and institutional crisis in North Macedonia sparked by wiretapping allegations against the then incumbent Prime Minister Nikola Gruevski. The Przino agreement, negotiated between the main political parties with support of the European Union, foresees the creation of a provisional government ahead of parliamentary elections that also involves ministers from the opposition, thereby fostering free and fair elections.

Following the CSES coding conventions, incumbent vote choice is classified based on the latest cabinet in office ahead of the election, i.e., the Xhaferi government. The following parties held posts in this transitional government:

| - Internal Macedonian Revolutionary Organization - Democratic
 | Party for Macedonian National Unity (VMRO-DPMNE, PARTY A,
 | NUMERICAL CODE 807001).
 | - Social Democratic Union of Macedonia (SDSM, PARTY B, NUMERICAL
 | CODE 807002).
 | - Liberal Democratic Party (LDP).
 | - Democratic Union for Integration (DUI, PARTY C, NUMERICAL CODE
 | 807003).
 | - Alliance for Albanians (AA).
 | Voters for any of these parties or their associated electoral
 | coalitions for the 2024 election are classified as having voted
 | for the incumbent government.

| Still, researchers are advised that transitional governments
 | based on the Przino Agreement, also formed in 2016 and 2020, are
 | mainly tasked with organizing elections, do not contest for
 | re-election, and assign portfolios to the opposition.
 | Consequently, the preceding cabinet, headed by Prime Minister
 | Dimitar Kovacevski (SDSM), did not involve VMRO-DPMNE, the major
 | opposition party at the time.

| ELECTION STUDY NOTES - POLAND (2023): F3011_OUTGOV

| Respondents are classified as incumbent voters if they voted for
 | the United Right electoral coalition (NUMERICAL CODE 616001) led
 | by Law and Justice (PiS). For the 2023 election, United Right
 | consisted of the following member parties:
 | - Law and Justice (PiS), PARTY A.
 | - Sovereign Poland (SP), PARTY G, NUMERICAL CODE 616007.
 | - The Republicans.
 | - Kukiz'15.
 | Law and Justice, Sovereign Poland and the Republicans held
 | cabinet posts in the outgoing government by Prime Minister
 | Mateusz Morawiecki (PiS). Formally, Kukiz'15 was not part of the
 | government, but supported it in parliament from 2021 to 2022.

| ELECTION STUDY NOTES - PORTUGAL (2022): F3011_OUTGOV

| Portuguese 2022 snap elections were called when the budget,
 | proposed by the Socialist minority government, was rejected in
 | the Parliament. The Left Bloc (BE) and the Portuguese Communist
 | Party (PCP), both of whom had previously supported the
 | government, joined the center-right to right-wing opposition
 | parties and rejected the budget. After that, the Portuguese
 | President announced a snap election.
 | Thus, F3011_OUTGOV was only coded as "1. VOTED FOR THE OUTGOING
 | GOVERNMENT (INCUMBENT)" for those respondents who voted for
 | PARTY A, the Socialist Party (NUMERICAL CODE 620001) in
 | F3011_LH_PL.

| ELECTION STUDY NOTES - SLOVAKIA (2023): F3011_OUTGOV

| At the time of the election, Slovakia was led by an interim
 | technocratic government, which was appointed by the President

| between May 15, 2023 and October 25, 2023, until the new
 | government formed after an early election on September 30, 2023.
 | Because of this, F3011_OUTGOV was coded as "9999996. NOT
 | ASCERTAINED /INCUMBENT CANDIDATE/PARTY DID NOT CONTEST." Before
 | the technocratic government, the Slovakian parliament was led by
 | Eduard Heger from Ordinary People - Independent Personalities
 | (OlaNO).

| ELECTION STUDY NOTES - SWEDEN (2022): F3011_OUTGOV

| F3011_OUTGOV classifies respondents as incumbent voters if they
 | voted for the Social Democrats in F3011_LH_PL (SAP, PARTY A,
 | NUMERICAL CODE 752001).
 | After incumbent Prime Minister Stefan Lofven (SAP) retired in
 | November 2021, former finance minister Magdalena Andersson (SAP)
 | became Prime Minister, and the first female holding this
 | position. However, the Greens (MG), who previously formed a
 | minority government with the SAP, left the coalition shortly
 | after Andersson's budget proposal failed to win a majority in
 | parliament. The now single-party SAP minority government
 | - approved by the Riksdag shortly after - remained in office
 | until election day, and is hence used for classifying voters in
 | F3011_OUTGOV.

| ELECTION STUDY NOTES - SWITZERLAND (2023): F3011_OUTGOV

| The Federal Council of Switzerland functions as the collective
 | executive in Switzerland. Because the Federal President rotates
 | among its members from each of the parties on a fixed, annual
 | basis, no incumbent was coded.

| ELECTION STUDY NOTES - TAIWAN (2024): F3011_OUTGOV

| For Taiwan 2024, respondents are coded as having voted for the
 | incumbent if they voted for Tsai Ing-wen's party, the Democratic
 | Progressive Party (DPP, PARTY A, NUMERICAL CODE 158001), in the
 | current Presidential election.
 | Incumbent President Tsai Ing-wen served as President of Taiwan
 | for two consecutive terms from 2016 to 2024, and was hence
 | ineligible for re-election due to term limits.
 | For the 2024 Presidential election, the DPP nominated Lai
 | Ching-te (LEADER A).

----- F3011_VS_1 >>> VOTE SWITCHER BETWEEN CURRENT ELECTION AND PREVIOUS ELECTION -----

Whether or not the respondent reports voting for the same
 party/coalition in the current and previous election.

.....

0. DID NOT SWITCH (VOTED FOR SAME PARTY/COALITION
 IN CURRENT & PREVIOUS ELECTION)

1. SWITCHER (CHANGED VOTE IN CURRENT ELECTION FROM
 PREVIOUS ELECTION)

9. MISSING

| CSES QUESTION CLASSIFICATION: DERIVATIVE VARIABLE (BASED ON CORE)

| VARIABLE NOTES: F3011_VS_1

| F3011_VS_1 ascertains whether or not the respondent reports
 | voting for the same party/coalition in the current and previous
 | election or whether the respondent reports voting for a different
 | party/ coalition in the current election from the previous
 | election.

| F3011_VS_1 is constructed based on the respondent's reported
 | vote choice in the current and previous main election.
 | In polities where multiple elections took place simultaneously,
 | F3011_VS_1 reports the vote-switching behavior in the main
 | election.

| CSES classifies the main election based on the regime
 | (executive) type and the election in which the CSES survey has
 | been administered. For polities rated as parliamentary systems,
 | CSES classifies the main election as elections to the lower house
 | for most studies. It deviates for a few cases when elections to
 | the upper house constitute the main election, usually due to the
 | respective CSES study focusing on the upper house contest.
 | For polities rated as Presidential systems, CSES conventionally
 | classifies the main election as the Presidential election. It
 | sometimes deviates when data for the Presidential election is
 | unavailable (e.g., when the CSES survey was administered in a
 | midterm election). For polities rated as mixed systems, CSES
 | has tended to classify the main election as elections to the
 | lower house. However, it sometimes deviates depending on data
 | availability. Users are advised to consult the table listed in
 | VARIABLE NOTES for F3010_ME specifying the main election for
 | each study in CSES for specific details.

| Respondents are classified as "0. DID NOT SWITCH" when they
 | expressed a vote choice for the same party/coalition in the
 | current and previous election. In instances where a coalition is
 | competing in the current or previous election, and the parties
 | that comprise that coalition are competing individually in the
 | previous/current election, respondents who report voting for
 | the coalition and/or one of the parties comprising the coalition
 | are classified as "0. DID NOT SWITCH." Details of these cases
 | are specified in ELECTION STUDY NOTES below.

| Respondents are classified as "1. SWITCHER" when their reported
 | vote in the current election differs from their reported vote
 | in the previous election. Further, respondents are classified as
 | "1. SWITCHER" when they report voting in one election (current
 | or previous) for a party/coalition that did not exist or

| contest in the other (current or previous) election.

| Respondents are classified as "9. MISSING" when data about their vote choice in the current and/or previous election is unavailable, if they report that they don't know who they voted for, or if they refused to answer the question. Additionally, respondents who report voting for an independent candidate or other parties without further specification are classified as "9. MISSING."

| In instances where current and previous vote choice refer to different types of elections, e.g., the current main election is Presidential but previous vote choice refers to the lower house election only, these studies are set to "9. MISSING".

| ELECTION STUDY NOTES - BRAZIL (2022): F3011_VS_1

| Two Presidential candidates changed party affiliations between the previous 2018 election and the current 2022 election, namely:

| Jair Bolsonaro (LEADER B) contested the previous 2018 election as a candidate of the Social Liberal Party (PSL, NUMERICAL CODE 076033) but left the party in 2019 - joining the Liberal Party (PL, PARTY B, NUMERICAL CODE 076002) in November 2021.

| Geraldo Alckmin (LEADER G) contested the previous 2018 election for the Brazilian Social Democratic Party (PSDB, PARTY F, NUMERICAL CODE 076012) but left the party in 2021 to join the Brazilian Socialist Party (PSB, PARTY G, NUMERICAL CODE 076013).

| In 2022, Alckmin contested on the Workers' Party ticket (PT, PARTY A, NUMERICAL CODE 076001) as Lula da Silva's vice-Presidential candidate.

| Researchers are advised that for Brazil, vote-switching behavior in F3011_VS_1 is based on respondents' party choice rather than candidate choice, to ensure a consistent approach with other studies. Hence, voters who voted for Bolsonaro's Social Liberal Party in the previous election and for the Liberal Party in the current election are classified as "1. SWITCHER" in F3011_VS_1.

| Likewise, respondents voting for Alckmin's PSDB in the previous election and for the Workers' Party in the current election are classified as "1. SWITCHER" in F3011_VS_1.

| ELECTION STUDY NOTES - MONTENEGRO (2023): F3011_VS_1

| Together! (DPS-SD-DUA-LP, NUMERICAL CODE: 499002) was an electoral coalition participating in the current 2023 lower house election. This coalition consisted of the following parties: Democratic Party of Socialists (DPS), NUMERICAL CODE: 499002), Social Democrats of Montenegro (SD, NUMERICAL CODE: 499097), Democratic Union of Albanians (DUA) and Liberal Party of Montenegro (LP).

| Respondents who reported voting for one of these parties in the previous election, and for Together! in the current election are classified as "0. DID NOT SWITCH" for F3011_VS_1.

| For the Future of Montenegro (NSD-DNP-RP, NUMERICAL CODE 499003) was an electoral alliance participating in the current 2023 and previous 2020 lower house elections. In 2023, the coalition was composed of the following parties: New Serbian Democracy (NSD, NUMERICAL CODE 499003, Democratic People's Party (DNP, NUMERICAL CODE 499098), and Workers' Party (RP). However, researchers are advised that the For the Future of Montenegro alliance was supported by the following additional parties in the previous 2020 lower house election: Socialist People's Party (SNP, NUMERICAL CODE 499006), Movement for Changes (PzP, NUMERICAL CODE 499013), United Montenegro (UCG, NUMERICAL CODE 499019), True Montenegro (PCG), and Free Montenegro (SCG). The latter two parties participated in the People's Coalition in the 2023 election (DP-PCG-SCG-DSS, NUMERICAL CODE 499011). Respondents who reported voting for For the Future of Montenegro in the previous election and for either this alliance, Movement for Changes or the People's Coalition in the current election are classified as "0. DID NOT SWITCH" for F3011_VS_1.

| Aleksa and Dritan - Count Bravely! (Demokrate-URA, NUMERICAL CODE 499004) was an electoral coalition that was formed for the current lower house election. This coalition was composed of the following member parties: United Reform Action (URA, NUMERICAL CODE 499004) and Democratic Montenegro (Demokrate, NUMERICAL CODE 499099). In the previous 2020 election, URA contested the election jointly with the Citizen's Union "Civis", forming the electoral coalition Civic Platform "In Black and White" (NUMERICAL CODE 499021). Respondents who reported voting for the Civic Platform in the previous election, and for Count Bravely! in the current election are classified as "0. DID NOT SWITCH" for F3011_VS_1.

| ELECTION STUDY NOTES - NORTH MACEDONIA (2024): F3011_VS_1

| "Your Macedonia" (NUMERICAL CODE: 807001) was an electoral coalition participating in the current 2024 lower house election. This coalition was led by the Internal Macedonian Revolutionary Organization - Democratic Party for Macedonian National Unity (VMRO-DPMNE) and comprised 21 additional smaller parties. For the previous 2020 election, VMRO-DPMNE was the dominant member of the "Renewal of Macedonia" coalition. Due to VMRO-DPMNE's dominance in both alliances, respondents who reported voting for "Your Macedonia" in the current election, and the "Renewal of Macedonia" coalition in the previous election are classified as "0. DID NOT SWITCH" for F3011_VS_1. Still, researchers are advised that some of the smaller coalition members changed affiliations between contests, most notably the Besa Movement (BESA, NUMERICAL CODE: 807010), which was part of the "Your Macedonia" coalition in the previous election, but joined the Vlen Coalition (PARTY D, NUMERICAL CODE: 807004) for the current election.

| "For a European Future" (NUMERICAL CODE: 807002) was an

| electoral coalition participating in the current 2024 lower
| house election.
| This coalition was led by the Social Democratic Union of
| Macedonia (SDSM) and comprised 13 additional smaller parties.
| For the previous 2020 election, SDSM was the dominant member of
| the "We can" coalition.
| Due to SDSM's dominance in both alliances, respondents who
| reported voting for "For a European Future" in the current
| election, and the "We can" coalition in the previous election
| are classified as "0. DID NOT SWITCH" for F3011_VS_1.
| Still, researchers are advised that some of the smaller
| coalition members changed affiliations between contests.

| "European Front" (NUMERICAL CODE: 807003) was an electoral
| coalition that was formed for the current lower house election.
| This coalition was composed of the following member parties:
| - Democratic Union for Integration (DUI), PARTY C, NUMERICAL
| CODE 807003.
| - Democratic Party of Albanians (DPA), NUMERICAL CODE 807013.
| - Alliance for Albanians (Ziadin Sela group), NUMERICAL CODE
| 807009.
| - People's Movement.
| - Democratic Party of Turks of Macedonia (DPT).
| - Movement of the Turks of Macedonia for Justice and Democracy.
| - Roma Union.
| - European Democratic Party.
| - Bosniak Democratic Union.
| Respondents who reported voting for DUI or DPA in the previous
| election and the "European Front" current election are
| classified as "0. DID NOT SWITCH" for F3011_VS_1.

| "Bravely for Macedonia" (NUMERICAL CODE: 807007) was an electoral
| coalition that was formed for the current lower house election.
| This coalition was composed of the following member parties:
| - Citizen Option for Macedonia (GROM), NUMERICAL CODE 807014.
| - Party for the Full Emancipation of the Roma of Macedonia
| (PCERM).
| - Integra - Macedonian Conservative Party, NUMERICAL CODE 807018.
| Respondents who reported voting for one of these parties in the
| previous election, and for "Bravely for Macedonia" in the
| current election are classified as "0. DID NOT SWITCH" for
| F3011_VS_1.

| ELECTION STUDY NOTES - POLAND (2023): F3011_VS_1

| The following four alliances participated in the current and
| previous lower house election:
| - United Right (ZP, NUMERICAL CODE 616001)
| - Civic Coalition (KO, NUMERICAL CODE 616002)
| - The Left (NUMERICAL CODE 616004)
| - Confederation Liberty and Independence (Konfederacja,
| NUMERICAL CODE 616006).
| Voters who voted for any of these alliances in the current
| election and for their respective predecessor in the previous

| election are classified as "0. DID NOT SWITCH" in F3011_VS_1.
 | Details on the composition of each of these electoral coalitions
 | are provided in Codebook Part 3.

| Further, researchers are advised that Third Way (TD, NUMERICAL
 | CODE 616003) was an alliance participating in the current lower
 | house election. This coalition consisted of the following
 | parties:

- | - Szymon Holownia's Poland 2050 (PL2050), PARTY C.
- | - Polish People's Party (PSL), PARTY E, NUMERICAL CODE 616005.
- | - Agreement, NUMERICAL CODE 616014.
- | - Union of European Democrats (UED).
- | - Center for Poland (CdPL).

| In the previous 2020 election, PSL formed the electoral coalition
 | "Polish Coalition" (NUMERICAL CODE 616015) together with UED as
 | well, further supported by the Alliance of Democrats (SD),
 | Silesians Together, Poland Needs Us, and One-PL.
 | Respondents who reported voting for the Third Way in the current
 | election, and for the Polish Coalition in the previous election
 | are classified as "0. DID NOT SWITCH" for F3011_VS_1.

| ELECTION STUDY NOTES - PORTUGAL (2024): F3011_VS_1

| Democratic Alliance (AD, NUMERICAL CODE: 620101) was an
 | electoral coalition participating in the current 2024 lower
 | house election. This coalition consisted of the following
 | parties: Social Democratic Party (PPD/PSD, NUMERICAL CODE
 | 620101), and Democratic and Social Center - People's Party
 | (CDS-PP, NUMERICAL CODE 620109).
 | Respondents who reported voting for one of these parties in the
 | previous election, and for the Democratic Alliance in the current
 | election are classified as "0. DID NOT SWITCH" for F3011_VS_1.

| ELECTION STUDY NOTES - SLOVAKIA (2023): F3011_VS_1

| In the previous 2020 parliamentary election, Progressive
 | Slovakia (PS, NUMERICAL CODE: 703002) formed an alliance with
 | Democrats (NUMERICAL CODE: 703010). Respondents who reported
 | voting for the alliance in the previous election, and either for
 | Progressive Slovakia (703002) or Democrats (703010) in the
 | current election are classified as "0. DID NOT SWITCH" for
 | F3011_VS_1.

| Respondents who have voted for For The People (NUMERICAL CODE:
 | 703019) in the previous 2020 election and for OLaNO and Friends
 | (NUMERICAL CODE: 703004) in the 2023 election were not coded as
 | switching because the former one merged into the latter.

| Respondents who have voted for the Hungarian Community
 | Togetherness (NUMERICAL CODE: 703020) in the previous 2020
 | election and for the Hungarian Alliance (NUMERICAL CODE: 703009)
 | in the 2023 election were not coded as switching because the
 | former one merged into the latter.

| Respondents who have voted for Good Choice (NUMERICAL CODE:
 | 703021) in the previous 2020 election and for Voice - Social
 | Democracy (NUMERICAL CODE: 703003) in the 2023 election were not
 | coded as switching because the former one merged into the latter.

| ELECTION STUDY NOTES - TURKIYE (2023): F3011_VS_1

| One Presidential candidate changed party affiliations between
 | the previous 2018 election and the current 2023 election:
 | Muharrem Ince contested the previous 2018 election as a candidate
 | of the Republican People's Party (CHP, PARTY B, NUMERICAL CODE
 | 792002) but left the party in 2021 to form the Homeland Party
 | (Memleket, PARTY D, NUMERICAL CODE 792004).
 | Researchers are advised that for Turkiye, vote-switching behavior
 | in F3011_VS_1 is based on respondents' party choice rather than
 | candidate choice, to ensure a consistent approach with other
 | studies. Hence, voters who voted for the CHP in the previous
 | election and for Memleket in the current election are classified
 | as "1. SWITCHER" in F3011_VS_1.

 F3011_LR_CSES >>> CURRENT MAIN ELECTION -
 VOTE FOR LEFTIST/CENTER/RIGHTIST - CSES

Whether or not the respondent reports voting for a leftist/center/
 rightist party/candidate of the party, based on CSES Collaborators
 experts' judgment of parties' ideology.

.....

1. VOTED FOR LEFTIST PARTY/CANDIDATE
2. VOTED FOR CENTER PARTY/CANDIDATE
3. VOTED FOR RIGHTIST PARTY/CANDIDATE

9. MISSING

| CSES QUESTION CLASSIFICATION: DERIVATIVE VARIABLE (BASED ON CORE)

| VARIABLE NOTES: F3011_LR_CSES

| F3011_LR_CSES details whether or not the respondent reports
 | voting for a leftist/center/rightist party/candidate of the
 | party. The classification is based on CSES Collaborators experts'
 | judgment of parties' ideology and the respondents' reported vote
 | choice.

| F3011_LR_CSES is available for voters who reported voting for a
 | party where expert judgments are available (i.e., for parties
 | receiving an alphabetical classification by CSES). For more
 | details on which parties/coalitions receive alphabetical
 | classification, see "CSES MODULE 6 CODING OF PARTIES/COALITIONS
 | & LEADERS" in Codebook Part 3.

F3011_LR_CSES differentiates voters based on expert judgments of the CSES Collaborators on the left-right ideology scale. Collaborators assign parties scores on an 11-point scale ranging from "0. LEFT" to "10. RIGHT" for all parties assigned an alphabetical code by CSES. The expert judgment data by party are available in variable F5029_.

The coding of F3011_LR_CSES is based on F3100_LR_CSES. For F3100_LR_CSES, CSES linked the CSES Collaborator expert judgment with the reported vote choice of the respondent in the main election. A respondent who reports voting for a party/candidate of PARTY A is assigned the value the CSES Collaborator gave to PARTY A in the said election on the left-right scale (and so on for PARTY B, PARTY C etc...). CSES reports these values in variable F3100_LR_CSES.

These scores provided in F3100_LR_CSES have then been re-classified for F3011_LR_CSES to establish whether a respondent voted for a leftist, center or rightist party/candidate. Scores assigned by Collaborators are recoded into a trichotomy as follows:

F3011_LR_CSES	CSES Collaborators Rating
01.	0.0 - 3.9
02.	4.0 - 6.0
03.	6.1 - 10.0

In polities where multiple elections took place simultaneously, this variable reports the vote choice in the main election.

CSES classifies the main election based on the regime (executive) type and the election in which the CSES survey has been administered. For polities rated as parliamentary systems, CSES classifies the main election as elections to the lower house for most studies. It deviates for a few cases when elections to the upper house constitute the main election, usually due to the respective CSES study focusing on the upper house contest. For polities rated as Presidential systems, CSES conventionally classifies the main election as the Presidential election. It sometimes deviates when data for the Presidential election is unavailable (e.g., when the CSES survey was administered in a midterm election). For polities rated as mixed systems, CSES has tended to classify the main election as elections to the lower house. However, it sometimes deviates depending on data availability. Users are advised to consult the table listed in VARIABLE NOTES for F3010_ME specifying the main election for each study in CSES for specific details.

Data are unavailable primarily because Collaborator expert judgments of parties were not provided for certain election studies.

| Data are unavailable for TAIWAN (2024) and UNITED STATES (2024).

| ELECTION STUDY NOTES - SLOVAKIA (2023): F3011_LR_CSES

| For the NUMERICAL CODE 703004, the classification in
 | F3011_LR_CSES refers exclusively to the expert rating of
 | Ordinary People - Independent Personalities (OLaNO),
 | even though respondents were able to indicate voting for an
 | alliance in F3011_LH_PL (OLaNO and Friends, NUMERICAL CODE
 | 703004).

 F3011_LR_MARPOR >>> CURRENT MAIN ELECTION - VOTE FOR LEFTIST/RIGHTIST
 (RILE) - MARPOR/CMP

Whether or not the respondent reports voting for a leftist or
 rightist party or candidate of the party, based on MARPOR's "RILE"
 index value.

-
- 0. VOTED FOR LEFTIST PARTY/CANDIDATE
 - 1. VOTED FOR RIGHTIST PARTY/CANDIDATE
 - 9. MISSING

| CSES QUESTION CLASSIFICATION: DERIVATIVE VARIABLE (BASED ON CORE)

| VARIABLE NOTES: F3011_LR_MARPOR

| F3011_LR_MARPOR details whether or not the respondent reports
 | voting for a leftist or rightist party or candidate of the party.
 | The classification is based on MARPOR's "RILE" index value
 | assigned to the party based on the manifesto the party contested
 | the election on and the respondents' reported vote choice.

| F3011_LR_MARPOR is available for voters who reported voting for a
 | party receiving an alphabetical classification by CSES, and for
 | which MARPOR "rile" index data is available. For more details on
 | which parties/coalitions receive alphabetical classification,
 | see "CSES MODULE 6 CODING OF PARTIES/COALITIONS & LEADERS" in
 | Codebook Part 3.

| F3011_LR_MARPOR differentiates voters who voted for a leftist/
 | rightist party/candidate of a party based on the Manifesto
 | Research on Political Representation (MARPOR/CMP) data.
 | F3011_LR_MARPOR is based on the "RILE" index. The index was
 | developed by Laver and Budge (1992). It takes 24 categories (12
 | are defined as right-wing and 12 as left-wing) and subtracts the
 | sum of all right-wing items from the sum of all left-wing items.
 | The RILE index ranges from -100 (if a party only mentions left-

wing issues in its program) and +100 (if a party only mentions right-wing issues in its program). However, these are the theoretical maximum and minimum values which are empirically rare.

More information about MARPOR/CMP data and the RILE index can be found at <https://manifestoproject.wzb.eu/> (Date accessed: April 02, 2024).

The coding of F3011_LR_MARPOR is based on F3100_LR_MARPOR. For F3100_LR_MARPOR, CSES linked the MARPOR/CMP data with the reported vote choice of the respondent in the main election. A respondent who reports voting for a party/candidate of PARTY A is assigned the value the MARPOR/CMP RILE index gives to PARTY A in the said election (and so on for PARTY B, PARTY C etc...). CSES reports these values in variable F3100_LR_MARPOR.

These scores provided in F3100_LR_MARPOR have then been re-classified for F3011_LR_MARPOR to establish whether a respondent voted for a leftist/rightist party/candidate. RILE Scores assigned by MARPOR/CMP are recoded into a dichotomy as follows:

F3011_LR_MARPOR	MARPOR RILE index
00.	-100 - -0.01
01.	0.01 - 100.0

When a party scores 0.00 on the RILE index, that usually means that there is not enough data on the dimensions available to construct a reliable RILE estimate. These cases have been set to "9. MISSING".

In polities where multiple elections took place simultaneously, this variable reports the vote choice in the main election.

CSES classifies the main election based on the regime (executive) type and the election in which the CSES survey has been administered. For polities rated as parliamentary systems, CSES classifies the main election as elections to the lower house for most studies. It deviates for a few cases when elections to the upper house constitute the main election, usually due to the respective CSES study focusing on the upper house contest. For polities rated as Presidential systems, CSES conventionally classifies the main election as the Presidential election. It sometimes deviates when data for the Presidential election is unavailable (e.g., when the CSES survey was administered in a midterm election). For polities rated as mixed systems, CSES has tended to classify the main election as elections to the lower house. However, it sometimes deviates depending on data availability. Users are advised to consult the table listed in VARIABLE NOTES for F3010_ME specifying the main election for each study in CSES for specific details.

=====

| CSES and MARPOR/CMP have different scopes of parties/coalitions
 | in elections and thus corresponding values assigned to
 | parties/coalitions by CSES Collaborators may be unavailable in
 | MARPOR/CMP and vice versa.
 | In this variable, the L-R classifications assigned by MARPOR/CMP
 | (originally available in F3100_MARPOR) are transformed into a
 | dichotomous variable.
 | Meanwhile, the L-R classifications assigned by CSES Collaborators
 | (available in F3011_LR_CSES and originally in F3100_LR_CSES and
 | F5029_ respectively) are transformed into a three-category
 | variable. Consequently, users are advised that this results in
 | some parties/coalitions falling into different categorizations
 | on F3011_LR_CSES and F3011_LR_MARPOR.

| Users are advised that CSES and MARPOR/CMP sometimes classify
 | coalitions differently in elections and across polities. For
 | example, CSES sometimes has data solely on coalitions and not
 | the parties comprising the alliance, while MARPOR/CMP may have
 | data concerning the individual parties in the coalition, or
 | vice versa. Consequently, some parties may have multiple
 | identifiers within the MARPOR/CMP dataset across time. A non
 | comprehensive list of these deviations is noted in Part 3
 | of the CSES Module Codebook in ELECTION STUDY NOTES.

| In certain elections, there can be little intra-study variation
 | on this variable as all the main parties (i.e., those receiving
 | most votes) are classified in one category (e.g., they are
 | all designated by MARPOR/CMP to have minus scores, and
 | consequently, all are deemed to be on the left of the ideological
 | spectrum).
 | Intra-study variation can be obtained by consulting variable
 | F3100_LR_MARPOR.

| Data are unavailable primarily because some polities which are
 | in the CSES are not represented in the MARPOR/CMP dataset.

| Data are unavailable for AUSTRIA (2024), DENMARK (2022),
 | FRANCE (2022), NEW ZEALAND (2023), NORTH MACEDONIA (2024),
 | POLAND (2023), PORTUGAL (2024), SLOVAKIA (2023), SLOVENIA
 | (2022), SWITZERLAND (2023), TAIWAN (2024) and TURKIYE (2023).

F3011_IF_CSES >>> CURRENT MAIN ELECTION - VOTE CHOICE BY IDEOLOGICAL
 FAMILY CLASSIFICATION - CSES

Respondents' reported vote choice by the ideological family of the
 party/candidate of the party, based on CSES Collaborators experts'
 classifications.

-
- 01. VOTED FOR A SOCIALIST PARTY
 - 02. VOTED FOR AN ECOLOGY PARTY

- 03. VOTED FOR A SOCIAL DEMOCRATIC PARTY
- 04. VOTED FOR A LIBERAL PARTY
- 05. VOTED FOR A CHRISTIAN DEMOCRAT PARTY
- 06. VOTED FOR A CONSERVATIVE PARTY
- 07. VOTED FOR A NATIONAL PARTY
- 10. VOTED FOR A PARTY OF OTHER CLASSIFICATION
- 97. NOT APPLICABLE
- 98. NO IDEOLOGICAL FAMILY MENTIONED
- 99. MISSING

| CSES QUESTION CLASSIFICATION: DERIVATIVE VARIABLE (BASED ON CORE)

| VARIABLE NOTES: F3011_IF_CSES

| F3011_IF_CSES details respondents' reported vote choice by the ideological family of the party/candidate of the party. The classification is based on CSES Collaborators experts' judgments of the party's ideological family and the respondents' reported vote choice.

| F3011_IF_CSES is available for voters who reported voting for a party where expert judgments are available (i.e., for parties receiving an alphabetical classification by CSES). For more details on which parties/coalitions receive alphabetical classification see "CSES MODULE 6 CODING OF PARTIES/COALITIONS & LEADERS" in Codebook Part 3.

| F3011_IF_CSES differentiates voters based on the expert judgment of the CSES Collaborators on the ideological family classification. The expert judgment data by party are available in variables F5028_.

| The coding of F3011_IF_CSES is based on F3100_IF_CSES. For F3100_IF_CSES, CSES linked the CSES Collaborator expert judgment with the reported vote choice of the respondent in the main election. A respondent who reports voting for a party/candidate of PARTY A is assigned the value the CSES Collaborator gave to PARTY A in the said election on the ideological family classification (and so on for PARTY B, PARTY C etc...). CSES reports these values in variable F3100_IF_CSES.

| These classifications provided in F3100_IF_CSES have then been re-classified for F3011_IF_CSES to establish an ideological family a respondent voted for. Scores assigned by Collaborators are recoded as follows:

F3011_IF_CSES	CSES Collaborators score
01.	Socialist parties
02.	Ecology parties
03.	Social Democratic parties

Data are unavailable for TAIWAN (2024) and UNITED STATES (2024).

1. VERY SATISFIED
2. FAIRLY SATISFIED
3. NEUTRAL
4. NOT VERY SATISFIED
5. NOT AT ALL SATISFIED

7. VOLUNTEERED: REFUSED

8. VOLUNTEERED: DON'T KNOW

9. MISSING

| CSES QUESTION CLASSIFICATION: MODULE THEME

| VARIABLE NOTES: F3012_1

| F3012_1 should have only been asked for those respondents who reported to have voted for a party or candidate in the current main election (F3011_).
 | Still, in the following polities, F3012_1 was administered to all respondents who cast a vote in the main election as specified in F3010 (TURNOUT: MAIN ELECTION), irrespective of whether these respondents specified a party/candidate vote in F3011_:
 | BRAZIL (2022), MONTENEGRO (2023), PORTUGAL (2024), SLOVAKIA (2023), and SWITZERLAND (2023).

| ELECTION STUDY NOTES - NEW ZEALAND (2023): F3012_1

| For the New Zealand (2023) survey, which was conducted based on self-administered questionnaires, F3012_1 and F3012_3 were simplified and combined into one joint question. For measuring respondents' satisfaction with their vote choice or non-vote, they were asked "How satisfied were you with your decision you made about voting or not voting?". Hence, the same survey item was used to code F3012_1 (VOTE FOR PARTY/CANDIDATE) and F3012_3 (NON-VOTERS). F3012_1 reports answers for respondents who reported having cast a party-list vote, a district-candidate vote, or both in the current lower house election. Hence, the coding of F3012_1 assumes that voters were ascribing the question to their party/candidate choice when answering.

| ELECTION STUDY NOTES - PORTUGAL (2022): F3012_1

| In the Portugal (2022) study, respondents who answered "Don't answer" and "Don't know" to the vote choice question were still allowed to answer questions about their satisfaction with voting for a party/candidate. These respondents are set to missing for F3012_1.

 F3012_2 >>> Q11b. SATISFACTION ABOUT VOTE: BLANK/INVALID VOTES

Q11b. Are you very satisfied, fairly satisfied, not very satisfied, or not at all satisfied with your decision to vote blank/invalid in the last election?

.....

1. VERY SATISFIED
2. FAIRLY SATISFIED
4. NOT VERY SATISFIED
5. NOT AT ALL SATISFIED
7. VOLUNTEERED: REFUSED
8. VOLUNTEERED: DON'T KNOW
9. MISSING

| CSES QUESTION CLASSIFICATION: MODULE THEME

| VARIABLE NOTES: F3012_2

| F3012_2 should have only been asked for those respondents who
 | reported to have cast a blank/invalid vote in the current
 | main election (F3011_).

| Data are unavailable for AUSTRALIA (2022), NEW ZEALAND (2023),
 | SWITZERLAND (2023), and UNITED STATES (2024).

 F3012_3 >>> Q11c. SATISFACTION ABOUT VOTE: NON-VOTERS

Q11c. Are you very satisfied, fairly satisfied, not very satisfied,
 or not at all satisfied with your decision not to vote in
 the last election?

-
1. VERY SATISFIED
 2. FAIRLY SATISFIED
 4. NOT VERY SATISFIED
 5. NOT AT ALL SATISFIED
 7. VOLUNTEERED: REFUSED
 8. VOLUNTEERED: DON'T KNOW
 9. MISSING

| CSES QUESTION CLASSIFICATION: MODULE THEME

| VARIABLE NOTES: F3012_3

| F3012_3 should have only been asked for those respondents who
 | reported not to have turned out in the current main election
 | (as assessed in variable F3010).

| ELECTION STUDY NOTES - BRAZIL (2022): F3012_3

| In the Brazilian 2022 study, all respondents not selecting

| "1. RESPONDENT CAST A BALLOT" in F3010_PR_1 were asked
 | F3012_3. This includes respondents who refused to provide
 | their turnout (N = 1) and those who did not remember whether
 | they turned out to vote or not in F3010_PR_1 (N = 2).

| ELECTION STUDY NOTES - NEW ZEALAND (2023): F3012_3

| For the New Zealand (2023) survey, which was conducted based on
 | self-administered questionnaires, F3012_1 and F3012_3 were
 | simplified and combined into one joint question. For measuring
 | respondents' satisfaction with their vote choice or non-vote,
 | they were asked "How satisfied were you with your decision you
 | made about voting or not voting?". Hence, the same survey item
 | was used to code F3012_1 (VOTE FOR PARTY/CANDIDATE) and F3012_3
 | (NON-VOTERS). F3012_3 reports answers for respondents who
 | reported having neither cast a party-list vote, nor a district-
 | candidate vote in the current lower house election. Hence, the
 | coding of F3012_3 assumes that non-voters were ascribing the
 | question to their decision not to turn out to vote when
 | answering.

 F3013 >>> Q12. SATISFACTION ABOUT VARIETY OF CHOICE

Q12. Are you very satisfied, fairly satisfied, not very satisfied,
 or not at all satisfied with the variety of choice in the
 election?

UNITED STATES (2024)	2022

| -----
|
| Data are unavailable for BRAZIL (2022).

| ELECTION STUDY NOTES - BRAZIL (2022): F3015_LH

| For the previous 2018 Brazilian general election, turnout was
| assessed with an explicit reference to the Presidential elections
| only, which is why F3015_LH is unavailable for Brazil. However,
| researchers are advised that vote choice data for the previous
| lower house election are available for Brazil in F3016_LH_PL,
| which is why the 2018 election year is specified in the VARIABLE
| NOTES above.

| ELECTION STUDY NOTES - NEW ZEALAND (2023): F3015_LH

| For the 2020 lower house election, turnout and vote choice
| were assessed simultaneously, such that there was no standalone
| question assessing turnout. Specifically, respondents were
| asked separately for their party-list and district candidate
| vote in the 2020 general election, including the options
| "I was not eligible" and "I did not vote" in each of the
| two questions.

| For F3015_LH, respondents were coded as having voted if they
| provided a party choice for party-list vote, a district candidate
| vote, or both.

| Consequently, respondents indicating they did not vote in both
| questions are classified as non-voters. Ineligible voters were
| coded analogously (applicable to those specifying "I was not
| eligible" in both party list and district candidate questions).

| ELECTION STUDY NOTES - PORTUGAL (2024): F3015_LH

CSES Code	Election Study Code/Category
-----------	------------------------------

00.	I am sure I did not vote in the 2022 election I am not sure whether I voted but most likely I did not I am not sure whether I voted but most likely I
-----	--

| did
| 01. I am sure I voted in the 2022 election
| Respondents who selected an option "I am not sure whether I voted
| but most likely I did" in the Portugal (2024) study were still
| asked to report vote choice. Hence, there are 15 respondents
| who report vote choice, but are classified as non-voters in
| F3015_LH.

F3015_UH >>> Q14a. PREVIOUS UPPER HOUSE ELECTION: DID RESPONDENT CAST A
BALLOT

Whether or not the respondent cast a ballot in the PREVIOUS upper
house elections.
.....

- 0. RESPONDENT DID NOT CAST A BALLOT
- 1. RESPONDENT CAST A BALLOT

| CSES QUESTION CLASSIFICATION: CORE

| VARIABLE NOTES: F3016_PR_1

F3016_PR_1 details the respondent's vote choice for President in the first round of the PREVIOUS election, if applicable and the respondent cast a ballot in the Presidential election.

Parties/coalitions and their numerical and alphabetical classifications for each election study are detailed in Part 3 of the CSES Codebook.

To see which election this variable refers to, see VARIABLE NOTES for F3015_PR_1.

Respondents who mentioned not casting a ballot in the first round of the previous Presidential election (F3015_PR_1) but report a vote choice are included as it is not possible to identify why this inconsistency occurred. Users may identify these cases by cross-tabulating F3015_PR_1 and F3016_PR_1 in their statistical software.

Data are unavailable for MONTENEGRO (2023), NORTH MACEDONIA (2024) and POLAND (2023).

ELECTION STUDY NOTES - BRAZIL (2022): F3016_PR_1

Numerical codes in F3016_PR_1 refer to the following candidates:

NUMERICAL CODE	Election Study Code/Category
----------------	------------------------------

076001.	Fernando Haddad (PT)
076003.	Henrique Meirelles (MDB)
076004.	Ciro Gomes (PDT)
076006.	Joao Amoedo (NOVO)
076011.	Jose Maria Eymael (DC)
076012.	Geraldo Alckmin (PSDB)
076015.	Alvaro Dias (PODEMOS)
076018.	Guilherme Boulos (PSOL)
076023.	Cabo Daciolo (PATRIOTA)
076027.	Marina Silva (REDE)
076033.	Jair Bolsonaro (PSL)
076035.	Joao Goulart Filho (PPL)

ELECTION STUDY NOTES - FRANCE (2022): F3016_PR_1

Numerical codes in F3016_PR_1 refer to the following candidates:

NUMERICAL CODE	Election Study Code/Category
----------------	------------------------------

250001.	Emmanuel Macron (LREM)
250002.	Marine Le Pen (RN)
250003.	Jean-Luc Melenchon (FI)
250005.	Francois Fillon (LR)
250007.	Jean Lassalle (Resistons!)
250009.	Nicolas Dupont-Aignan (DLF)
250010.	Benoit Hamon (PS)
250011.	Philippe Poutou (NPA)

250012.	Nathalie Arthaud (LO)
250013.	Francois Asselineau (UPR)
250014.	Jacques Cheminade (S&P)

ELECTION STUDY NOTES - TAIWAN (2024): F3016_PR_1

Numerical codes in F3016_PR_1 refer to the following candidates:

| CSES QUESTION CLASSIFICATION: CORE

| VARIABLE NOTES: F3016_LH_PL

| F3016_LH_PL details the respondent's vote choice for party list
| in the PREVIOUS Lower House legislative election, if applicable
| and the respondent cast a ballot.

| Parties/coalitions and their numerical and alphabetical
| classifications for each election study are detailed in Part 3
| of the CSES Codebook.
| To see which election this variable refers to, see VARIABLE NOTES
| F3015_LH.

| Respondents who mentioned not casting a ballot in the previous
| lower house election (F3015_LH) but report a vote choice
| are included, as it is not possible to identify why this
| inconsistency occurred. Users may identify these cases by
| cross-tabulating F3015_LH and F3016_LH_PL in their statistical
| software.

| ELECTION STUDY NOTES - BRAZIL (2022): F3016_LH_PL

| Members of Brazil's lower house, the Chamber of Deputies, are
| elected from 27 multi-member districts by open list proportional
| representation.

| Collaborators assessed vote choice for the lower house with an
| open-ended question, reading as: "Who did you vote for federal
| deputy in the 2018 election?". Interviewers were instructed to
| document all the details the interviewee remembered about their
| vote choice, such as the candidate's name and party affiliation.
| This information was categorized by collaborators and used to
| code F3016_LH_PL.

| In classifying open-ended respondent answers, collaborators

identified some incomplete or erroneous information, such as voters claiming to have voted for a candidate who either wasn't registered or contested for a different office not related to the lower house. These instances were coded as follows:

CSES Code	Election Study Code/Category
999992.	Voted for a candidate who contested a different office (other than lower house MP) Voted for a candidate not registered with the Superior Electoral Court (TSE) Voter in another state
999993.	Invalid ballot Blank ballot

ELECTION STUDY NOTES - PORTUGAL (2024): F3016_LH_PL

Code 620101 refers to the Social Democratic Party (PPD/PSD).

ELECTION STUDY NOTES - SLOVAKIA (2023): F3016_LH_PL

In the previous 2020 parliamentary election, Progressive Slovakia (PS, NUMERICAL CODE 703002) ran together in a coalition with the Democrats (NUMERICAL CODE 703010). For variable F3016_LH_PL, it is not perfectly distinguishable whether voters voted for 703002. Progressive Slovakia or 703010. Democrats. Voters who indicated to have voted for this coalition in the 2020 election have been recoded into 703002, as Progressive Slovakia was the dominant party.

ELECTION STUDY NOTES - SWITZERLAND (2023): F3016_LH_PL

Voters who stated that they voted for the Christian Democratic People's Party of Switzerland (CVP/PDC) or the Conservative Democratic Party of Switzerland (BDP/PBD) in the previous National Council elections were coded "7560004. The Center", as both parties merged into one party in 2021 and contain the same numeric code.

Further, there are many small leftist parties in Switzerland. All of them are minor parties, which gather less than 1-2% of the national vote share. These are all independent parties, running only in some cantons. But because they belong to the same party family, the Swiss election study collapsed them into a single category in their questionnaires "AL - Alternative / Sol - Solidarites / MPS - Movimento per il socialismo". Within the CSES, these parties are classified as "999990. OTHER LEFT WING CANDIDATE/PARTY".

Besides, several respondents said that they "voted for persons, not parties" or that they "voted for several parties". These answers result from the peculiarities of the Swiss electoral system, which provides voters with many different options to express preference votes. For instance, the Swiss electoral system allows voters to select a blank list and fill in the names of candidates. Respondents who reported "voted for

persons, not parties" presumably did so by taking a blank list and writing in candidates they liked without knowing or caring which party these candidates represent. This means they could vote for candidates from different parties. This is also possible when voters take a party list but modify it by crossing out some candidates and replacing them with candidates from another party (panachage). In such cases, they might end up voting for an equal number of candidates from different parties. The survey asked respondents to indicate the party from which they voted for the most candidates. However, many respondents instead wrote in an open field that they "voted for several parties" without specifying which ones. Based on national collaborators' recommendation, both cases are coded "999992. OTHER CANDIDATE/PARTY (NOT FURTHER SPECIFIED)".

CSES Code	Election Study Code/Category
999990.	AL - Alternative / Sol - Solidarites / MPS - Movimento per il socialismo
999992.	Voted for persons, not parties Voted for several parties

ELECTION STUDY NOTES - TURKIYE (2023): F3016_LH_PL

One respondent with respondent ID 7920202300000000868 stated to have voted for the Workers' Party of Turkiye (TIP) in F3016_LH_PL. However, TIP did not contest in the previous 2018 election, but had candidates running on the list of the People's Democratic Party (HDP, NUMERICAL CODE 792018). Consequently, the respondent voting for TIP was recoded to 792018 in F3016_LH_PL.

Two respondents with respondent IDs 7920202300000000404 and 79202023000000001323 in F1003_1 stated to have voted for the Grand Party (BBP) in F3016_LH_PL. However, BBP did not contest in the previous 2018 election, but ran under the banner of the Justice and Development Party (AKP, PARTY A, NUMERICAL CODE 792001). Consequently, the respondents voting for BBP were recoded to 792001 in F3016_LH_PL.

Finally, one respondent with ID 7920202300000000715 claimed to have voted for the Homeland Party (NUMERICAL CODE 792004) in F3016_LH_PL, although that party was only founded in 2021. As collaborators cannot provide an explanation for this minor anomaly, data remain unchanged.

F3016_LH_DC >>> Q14c. PREVIOUS LOWER HOUSE ELECTION: VOTE CHOICE - DISTRICT CANDIDATE

Respondent's vote choice for district candidate in the PREVIOUS lower house election.

| software.

| Data are unavailable for AUSTRALIA (2022) and SWITZERLAND (2023).

| ELECTION STUDY NOTES - BRAZIL (2022): F3016_UH_DC_

| Members of the Brazilian Senate (Senado Federal) serve a term of
| eight years and are elected in alternative electoral cycles.

| Each of Brazil's federative units (N = 27) has three Senators,
| such that the total N of seats is 81 (27 x 3).

| Two thirds of the seats (N = 54) are contested in one electoral
| cycle, while the remaining one-third are contested in the other.

| As the previous 2018 elections saw two-thirds of the seats
| contested, voters had two votes in this election (two Senators
| per state were being selected). Votes for these two seats per
| state are classified in F3016_UH_DC_1 and F3016_UH_DC_2. However,
| as the current 2022 election had one seat contested per state,
| voters cast only one vote in the current upper house elections,
| reported in F3011_UH_DC_1.

F3017 >>> Q15. EXTERNAL EFFICACY: WHO PEOPLE VOTE FOR MAKES A BIG
DIFFERENCE

Q15. Some people say that no matter who people vote for, it won't
make any difference to what happens. Others say that who
people vote for can make a big difference to what happens.
Using the scale on this card, (where ONE means that voting

won't make any difference to what happens and FIVE means that voting can make a big difference), where would you place yourself?

| Data are unavailable for SWITZERLAND (2023).

| ELECTION STUDY NOTES - NEW ZEALAND (2023): F3019_

| The wording of answer categories for F3019_ offered to
 | respondents deviated slightly from CSES MODULE 6 standards.
 | The original questionnaire labeled category 05. as 'Neutral'.
 | In the CSES questionnaire, there is no such label assigned.

| ELECTION STUDY NOTES - SWITZERLAND (2023): F3019_

| Collaborators advise that, unlike previous Swiss studies included
 | in CSES, the 2023 study does not include leader likability items.
 | This marks a departure from previous procedures, but
 | collaborators note that previous likability questions focused on
 | members of the government (Federal Councillors), who do not play
 | an important role in Swiss elections. While such leader
 | likability questions were rarely analysed by Swiss political
 | scientists, they were sometimes included in comparative work and
 | treated as equivalent to party leader ratings, which might have
 | been misleading.

| CSES QUESTION CLASSIFICATION: CORE

| VARIABLE NOTES: F3020_

| Parties and their alphabetical classifications for each election study are detailed in Part 3 of the CSES Codebook.

| In some cases, parties were assigned an alphabetical CSES code but data for F3020_ is not available for these parties. These

instances are documented in ELECTION STUDY NOTES below the party/leader table of the Election Study to which this applies in Part 3 of the CSES Codebook.

Note that the CSES asks Collaborators to ask the left-right scale questions even if left-right is not considered to be meaningful/important/widely understood in the area being studied. However, it was possible to add an optional alternative scale question. See F3021_.

Several respondents mentioned not knowing the left-right scale in one of the appropriate variables on F3020_ or F3020_R, but evaluated the other parties on even that scale. These data remain unchanged.

+++ TABLE: FREQUENCIES ON F3020_ AND F3020_R FOR RESPONDENTS REPORTING THAT THEY DID NOT KNOW OF THE LEFT-RIGHT SCALE BUT PROVIDE AN EVALUATION OF A PARTY ON THE LEFT-RIGHT SCALE

PARTY POLITY (ELEC YEAR)	_A	_B	_C	_D	_E	_F	_G	_H	_I	self
AUSTRALIA (2022)	4	5	7	-	-	7	-	-	-	3
BRAZIL (2022)	67	176	212	250	274	203	227	257	277	51

KEY: - = Alphabetical code not assigned to party/No cases.

Data are unavailable for TAIWAN (2024).

ELECTION STUDY NOTES - NEW ZEALAND (2023): F3020_

The wording of answer categories for F3020_ offered to respondents deviated slightly from CSES MODULE 6 standards. The original questionnaire labeled category 05. as 'Center'. In the CSES questionnaire, there is no such label assigned.

ELECTION STUDY NOTES - NORTH MACEDONIA (2024): F3020_

Collaborators advise that the classical left-right cleavage is comparatively less salient in Macedonian politics than in other European countries. While there is some ideological differentiation in the left-right sense, it is comparatively weaker and rather characterized by socio-cultural than economic appeals.

Beyond this, a relevant cleavage in Macedonian politics remains ethnic. Since the 1990s, party identities have largely followed

| ethnic lines (Macedonian, Albanian, Turkish, Serb, Romani,
 | etc.), though in recent years this division has occasionally
 | been bridged through multilingual campaigns and mixed-ethnicity
 | candidate lists.
 | Finally, political competition and voter behavior are also
 | shaped by personalistic and populist appeals, as well as
 | clientelistic exchanges, which together fill the party-voter
 | linkage vacuum left by the relatively weaker reliance on
 | traditional left-right appeals.

| VARIABLE NOTES: F3023_3

| Parties are identified in Part 3 of the CSES Codebook.

| Respondents' party mentions in F3023_3 depend on the two former questions (F3023_1 and F3023_2). The party mention in F3023_3 should have only been asked for those respondents who reported to be close (F3023_1) or at least closer (F3023_2) to a party. However, there are several respondents who mentioned a party (F3023_3), without feeling close (F3023_1) or closer (F3023_2) to a party. These data remained unchanged.

| +++ TABLE: FREQUENCIES ON F3023_3 FOR RESPONDENTS THAT DO NOT
| FEEL CLOSE (F3023_1) OR AT LEAST CLOSER (F3023_2) TO
| A PARTY

POLITY (ELEC YEAR)	NUMBER
NEW ZEALAND (2023)	1
SWEDEN (2022)	155
TURKIYE (2023)	26

| ELECTION STUDY NOTES - NEW ZEALAND (2023): F3023_3

| Instead of four party ID-related questions, the New Zealand 2023 survey assessed party ID by three questions.
| The first two questions asked respondents if they felt close (F3023_1) or a little closer (F3023_2) to any of the parties, and if so, to which one within one item, respectively.
| For F3023_3, party mentions in F3023_1 and F3023_2 were combined. In case respondents mentioned a party in both items, the party listed in F3023_1 was adopted for F3023_3.

| ELECTION STUDY NOTES - NORTH MACEDONIA (2024): F3023_3

| NUMERICAL CODE 807009 refers to the Alliance for Albanians (AA). Ahead of the 2024 elections, leadership for the Alliance for Albanians was contested between Ziadin Sela and Arben Taravari. While Sela sided with the coalition "European Front" led by the Democratic Union for Integration (DUI, PARTY C), Taravari supported the Vlen Coalition (PARTY D).
| In the original dataset, collaborators distinguished between the two factions of the party in variable F3023_3 (Party ID). For CSES, the codes have been harmonized into one joint NUMERICAL CODE 807009 (N = 19).
| Researchers interested in analyzing the factions separately may

| do so by recoding F3023_3 based on respondent IDs, as reported
 | in variable F1003_1 (Respondent Identifier). Out of the 19
 | respondents feeling close to the Alliance for Albanians, 16
 | opted for Taravari's wing (associated with the Vlen Coalition).
 | The 3 respondents feeling close to Sela's faction have the
 | following respondent IDs assigned to them in F1003_1:
 | - 807020240211805419
 | - 807020240212328121
 | - 807020240212708453.

| ELECTION STUDY NOTES - SWITZERLAND (2023): F3023_3

| In Switzerland, there are many small leftist parties. All of
 | them are minor parties, which gather less than 1-2% of the
 | national vote share. These are all independent parties, running
 | only in some cantons. But because they belong to the same party
 | family, the Swiss election study collapsed them into a single
 | category in their questionnaires "AL - Alternative / Sol -
 | Solidarites / MPS - Movimento per il socialismo". Within the
 | CSES, these parties are classified as "999990. OTHER LEFT WING
 | CANDIDATE/PARTY".
 | Further, several respondents stated that they felt close to
 | "No party/ rather persons" or "several parties". Collaborators
 | advise that these answers might result from the peculiarities of
 | the Swiss electoral system, which provides voters with a variety
 | of options to express preference votes. For F3023_3, these
 | answers have been classified as "999992. OTHER CANDIDATE/PARTY
 | (NOT FURTHER SPECIFIED)".

CSES Code	Election Study Code/Category
999990.	AL - Alternative / Sol - Solidarites / MPS - Movimento per il socialismo
999992.	No party / rather persons Several parties

 F3023_4 >>> Q23d. PARTY ID: DEGREE OF CLOSENESS TO THIS PARTY

Q23d. Do you feel very close to this party, somewhat close, or not
 very close?

.....

97. NOT APPLICABLE

99. MISSING

| CSES QUESTION CLASSIFICATION: DERIVATIVE VARIABLE (BASED ON CORE)

| VARIABLE NOTES: F3100_LR_CSES

|

| F3100_LR_CSES links the respondents' reported vote choice in the
 | main election with the CSES Collaborators experts' judgment of
 | the party the respondent reported voting for on the ideological
 | left-right scale (0-10).

| F3100_LR_CSES is available for voters who reported voting for a
 | party where expert judgments are available (i.e., for parties
 | receiving an alphabetical classification by CSES). For more
 | details on which parties/coalitions receive alphabetical
 | classification see "CSES MODULE 6 CODING OF PARTIES/COALITIONS
 | & LEADERS" in Codebook Part 3.

| F3100_LR_CSES assigns respondents a score based on respondents'
 | reported vote choice and the corresponding expert judgment
 | of the CSES Collaborators on the left-right ideology scale for
 | the party the respondent reports voting for.
 | Collaborators assign parties scores on an 11-point scale ranging
 | from "0. LEFT" to "10. RIGHT" for all parties assigned an
 | alphabetical code by CSES. The expert judgment data by party
 | is available in variable F5029_.

| Some parties/coalitions have scores that are not round numbers,
 | e.g., 1.5 or 3.5. These scores can reflect Collaborator
 | judgments or reflect the classification of a coalition.
 | Sometimes respondents report voting for a coalition, but
 | Collaborators score parties that comprise this coalition
 | separately on the L-R scale. The score used for F3100_LR_CSES
 | is the mean of L-R scores of parties that comprise the given
 | coalition.
 | All of these instances are detailed in ELECTION STUDY NOTES
 | below.

| F3100_LR_CSES links the CSES Collaborator expert judgment with
 | the reported vote of the respondent in the main election. Here,
 | a respondent who reports voting for a party/candidate of PARTY A
 | is assigned the value the CSES Collaborator gave to PARTY A in
 | the said election on the left-right scale (and so on for PARTY B,
 | PARTY C etc...).

| CSES classifies the main election based on the regime
 | (executive) type and the election in which the CSES survey has
 | been administered. For polities rated as parliamentary systems,
 | CSES classifies the main election as elections to the lower house
 | for most studies. It deviates for a few cases when elections to
 | the upper house constitutes the main election, usually due to the
 | respective CSES study focusing on the upper house contest.
 | For polities rated as Presidential systems, CSES conventionally
 | classifies the main election as the Presidential election. It
 | sometimes deviates when data for the Presidential election is
 | unavailable (e.g., when the CSES survey was administered in a
 | midterm election). For polities rated as mixed systems, CSES
 | has tended to classify the main election as elections to the
 | lower house. However, it sometimes deviates depending on data
 | availability. Users are advised to consult the table listed in

VARIABLE NOTES for F3010_ME specifying the main election for each study in CSES for specific details.

Data are unavailable for TAIWAN (2024) and UNITED STATES (2024).

ELECTION STUDY NOTES - MONTENEGRO (2023): F3100_LR_CSES

NUMERICAL CODE 499002: Together! was an alliance formed for the 2023 Montenegrin lower house election. Its members were:

- NUMERICAL CODE 499002: Democratic Party of Socialists (DPS) (L-R score = 4)
- NUMERICAL CODE 499097: Social Democrats of Montenegro (SD) (L-R score = 3)
- NUMERICAL CODE 499015: Liberal Party of Montenegro (LP) (L-R score = 7)
- Democratic Union of Albanians (DUA) (L-R score = 4)

Thus, the score for Together! for F3100_LR_CSES is 4.5.

NUMERICAL CODE 499003: For the Future of Montenegro was an alliance formed for the 2023 Montenegrin lower house election. Its members were:

- NUMERICAL CODE 499003: New Serbian Democracy (NSD) (L-R score = 7)
- NUMERICAL CODE 499098: Democratic People's Party (DNP) (L-R score = 7)
- Workers' Party (RP) (L-R score = 1)

Thus, the score for the For the Future of Montenegro coalition for F3100_LR_CSES is 5.

NUMERICAL CODE 499004: Aleksa and Dritan - Count Bravely! (Demokrate-URA) was an alliance formed for the 2023 Montenegrin lower house election. Its members were:

- NUMERICAL CODE 499004: United Reform Action (URA) (L-R score = 4)
- NUMERICAL CODE 499099: Democratic Montenegro (Demokrate) (L-R score = 6)

Thus, the score for Count Bravely! for F3100_LR_CSES is 5.

NUMERICAL CODE 499006: SNP-DEMOS was an alliance formed for the 2023 Montenegrin lower house election. Its members were:

- NUMERICAL CODE 499006: Socialist People's Party of Montenegro (SNP) (L-R score = 6)
- NUMERICAL CODE 499016: Democratic Alliance (DEMOS) (L-R score = 2)

Thus, the score for Count Bravely! for F3100_LR_CSES is 4.

ELECTION STUDY NOTES - POLAND (2023): F3100_LR_CSES

NUMERICAL CODE 616001: United Right (ZP) was an electoral coalition between the following parties:

=====

- | - NUMERICAL CODE 616001: Law and Justice (L-R score = 8)
- | - NUMERICAL CODE 616007: Sovereign Poland (SP) (L-R score = 9)
- | - and other smaller parties for the 2023 election.

| Thus, the score for the coalition in 2023 for F3100_LR_CSES is 8.5.

| NUMERICAL CODE 616002: Civic Coalition (K0) was an electoral coalition between the following parties:

- | - NUMERICAL CODE 616002: Civic Platform (PO) (L-R score = 5)
- | - NUMERICAL CODE 616008: Modern (Nowo)
- | - and other smaller parties for the 2023 election.

| As collaborators provided a rating for the PO only, the score for the K0 Coalition in 2023 for F3100_LR_CSES is 5.

| NUMERICAL CODE 616003: Third Way (KP) was an electoral coalition between the following parties:

- | - NUMERICAL CODE 616003: Szymon Holownia's Poland 2050 (PL2050) (LR-Score = 6)
- | - NUMERICAL CODE 616005: Polish People's Party (PSL) (L-R score = 7)
- | - and other smaller parties for the 2023 election.

| Thus, the score for the coalition in 2023 for F3100_LR_CSES is 6.5.

| NUMERICAL CODE 616004: The Left was an alliance for the 2023 election between several smaller parties and the following members:

- | - NUMERICAL CODE 616004: New Left (NL) (L-R score = 2)
- | - NUMERICAL CODE 616008: Left Together (Razem) (L-R score = 1)

| Thus, the score for The Left for F3100_LR_CSES is 1.5.

| ELECTION STUDY NOTES - PORTUGAL (2024): F3100_LR_CSES

| NUMERICAL CODE 620101: Democratic Alliance (AD) was an electoral coalition for the 2024 election between the following parties:

- | - NUMERICAL CODE 620101: Social Democratic Party (PPD/PSD) (L-R score = 7)
- | - NUMERICAL CODE 620109: Democratic and Social Center - People's Party (CDS-PP) (L-R score = 9)

| Thus, the score for the coalition in 2024 for F3100_LR_CSES is 8.

| ELECTION STUDY NOTES - SLOVAKIA (2023): F3100_LR_CSES

| For the NUMERICAL CODE 703004, the score in F3100_LR_CSES refers exclusively to the expert rating of Ordinary People - Independent Personalities (OLaNO), even though respondents were able to indicate voting for an alliance in F3011_LH_PL (OLaNO and Friends, NUMERICAL CODE 703004).

 F3100_LR_MARPOR >>> CURRENT MAIN ELECTION - VOTE CHOICE LINKED WITH
 MARPOR/CMP RILE

Respondents' reported party choice in the main election linked with
 the MARPOR/CMP "RILE" index assigned to the party.

.....
 -100 - +100. RILE INDEX SCORES

999. MISSING

| CSES QUESTION CLASSIFICATION: DERIVATIVE VARIABLE (BASED ON CORE)

| VARIABLE NOTES: F3100_LR_MARPOR

| F3100_LR_MARPOR links the respondents' reported vote choice in
 | the main election with the MARPOR/CMP "RILE" index assigned to
 | the party the respondent reported voting for based on the
 | manifesto the party contested the election on.

| F3100_LR_MARPOR is available for voters who reported voting for a
 | party receiving an alphabetical classification by CSES. For more
 | details on which parties/coalitions receive alphabetical
 | classification see "CSES MODULE 6 CODING OF PARTIES/COALITIONS
 | & LEADERS" in Codebook Part 3.

| F3100_LR_MARPOR assigns respondents a score based on respondent
 | reported vote choice and the corresponding value of that party
 | on the MARPOR "rile" index. The index was developed by Laver and
 | Budge (1992). It takes 24 categories (12 are defined as right-
 | wing and 12 as left-wing) and subtracts the sum of all right-wing
 | items from the sum of all left-wing items. The RILE index ranges
 | from -100 (if a party only mentions left-wing issues in its
 | program) and +100 (if a party only mentions right-wing issues in
 | its program). However, these are the theoretical maximum and
 | minimum values which are empirically rare.

| More information about MARPOR/CMP data and the RILE index can be
 | found at <https://manifestoproject.wzb.eu/>
 | (Date accessed: April 02, 2024).

| F3100_LR_MARPOR links the MARPOR "rile" index value with the
 | reported vote of the respondent in the main election. Here, a
 | respondent who reports voting for a party/candidate of PARTY A
 | is assigned the value MARPOR "rile" index gave to PARTY A in
 | the said election (and so on for PARTY B, PARTY C etc...).

| CSES classifies the main election based on the regime
 | (executive) type and the election in which the CSES survey has
 | been administered. For polities rated as parliamentary systems,

CSES classifies the main election as elections to the lower house for most studies. It deviates for a few cases when elections to the upper house constitutes the main election, usually due to the respective CSES study focusing on the upper house contest. For polities rated as Presidential systems, CSES conventionally classifies the main election as the Presidential election. It sometimes deviates when data for the Presidential election is unavailable (e.g., when the CSES survey was administered in a midterm election). For polities rated as mixed systems, CSES has tended to classify the main election as elections to the lower house. However, it sometimes deviates depending on data availability. Users are advised to consult the table listed in VARIABLE NOTES for F3010_ME specifying the main election for each study in CSES for specific details.

Users are advised that CSES and MARPOR/CMP sometimes classify coalitions differently in elections and across polities. For example, CSES sometimes has data solely on coalitions and not the parties comprising the alliance, while MARPOR/CMP may have data concerning the individual parties in the coalition, or vice versa. Consequently, some parties may have multiple identifiers within the MARPOR/CMP dataset across time. A non comprehensive list of these deviations is noted in Part 3 of the CSES MODULE 6 Codebook in ELECTION STUDY NOTES.

Data are unavailable primarily because some polities, which are in the CSES, are not represented in the MARPOR/CMP dataset.

Data are unavailable for AUSTRIA (2024), DENMARK (2022), FRANCE (2022), NEW ZEALAND (2023), NORTH MACEDONIA (2024), POLAND (2023), PORTUGAL (2024), SLOVAKIA (2023), SLOVENIA (2022), SWITZERLAND (2023), TAIWAN (2024), and TURKIYE (2023).

ELECTION STUDY NOTES - BRAZIL (2022): F3100_LR_MARPOR

Several coalitions formed for the 2022 Brazilian Presidential election in support of candidates. MARPOR/CMP does not include data on individual parties. Instead, alliances around Presidential candidates are classified.

The table below lists available MARPOR/CMP codes for these alliances for this contest, together with the candidate's name, the CSES NUMERICAL CODE assigned in F3011_PR_1 and the alliance's rile score assigned by MARPOR/CMP.

NUMERICAL CODE in		
F3011_PR_1 & Candidate	MARPOR Alliance Code	RILE Score
076001. Lula da Silva (PT)	180230	-12.84
076002. Jair Bolsonaro (PL)	180620	12.32
076003. Simone Tebet (MDB)	180311	-12.75

Details of alliances and parties/coalitions for BRAZIL (2022) are detailed in Part 3 of the CSES Codebook.

| ELECTION STUDY NOTES - FRANCE (2022): F3100_LR_MARPOR

| Data are unavailable for FRANCE (2022) for derivative vote choice variables based on MARPOR/CMP data (variables F3100_LR_MARPOR and F3011_LR_MARPOR). Although MARPOR/CMP provides RILE scores for France (2022), these scores were derived from party manifestos for the 2022 legislative elections held on June 12 and June 19, 2022, held around two months after the April 10 and April 24, 2022 Presidential elections covered by CSES.

| ELECTION STUDY NOTES - MONTENEGRO (2023): F3100_LR_MARPOR

| Several coalitions formed for the 2023 Montenegrin legislative election. Alliances and how RILE scores were mapped to F3100_LR_MARPOR are listed below.

| NUMERICAL CODE 499002: Together! (DPS-SD-DUA-LP) was an alliance between Democratic Party of Socialists (DPS), Social Democrats of Montenegro (SD), Democratic Union of Albanians (DUA), and the Liberal Party of MNE (LP). The RILE score as reported in F3100_LR_CSES refers to the alliance, that is, Together! (DPS-SD-DUA-LP).

| NUMERICAL CODE 499003: For the Future of Montenegro (NSD-DNP-RP) was an alliance between New Serbian Democracy (NSD), Democratic People's Party (DNP) and the Workers' Party (RP). The RILE score as reported in F3100_LR_CSES refers to the alliance, that is, For the Future of Montenegro (NSD-DNP-RP).

| NUMERICAL CODE 499004: Aleksa and Dritan - Count Bravely! (Demokrate-URA) was an alliance between United Reform Action (URA) and Democratic Montenegro (Demokrate). The RILE score as reported in F3100_LR_CSES refers to the alliance, that is, Count Bravely! (Demokrate-URA).

| NUMERICAL CODE 499006: SNP-DEMOS was an alliance between Socialist People's Party of Montenegro (SNP) and Democratic Alliance (DEMOS). RILE scores for the coalition or any of its member parties are unavailable for the 2023 contest. Hence, voters of the SNP-DEMOS alliance are coded "999. MISSING" in F3100_LR_MARPOR.

| ELECTION STUDY NOTES - PORTUGAL (2022): F3100_LR_MARPOR

| NUMERICAL CODE 620006: Unitarian Democratic Coalition (CDU) is an electoral coalition founded in 1987 between the Communist Party (PCP) and the Ecologist Party "The Greens" (PEV). For the 2022 legislative election, MARPOR/CMP does not include data on the alliance. Instead, individual parties are classified. The table below lists MARPOR/CMP codes for these parties for the 2022 contest, together with their rile score assigned by MARPOR/CMP.

Party	MARPOR Party Code	RILE Score
-------	-------------------	------------

Ecologist Party "The Greens"	35110	-14.286
Portuguese Communist Party	35220	-27.949

 F3100_POP_CSES >>> CURRENT MAIN ELECTION - VOTE CHOICE LINKED WITH
 CSES COLLABORATOR EXPERT JUDGMENT ON POPULISM

Respondents' reported party choice in the main election linked
 with the CSES Collaborators experts' judgment of the party on the
 populism scale (0-10).

-
- 00. VOTED FOR PARTY SCORED 0 ON POPULISM SCALE
 - 01.
 - 02.
 - 03.
 - 04.
 - 05.
 - 06.
 - 07.
 - 08.
 - 09.
 - 10. VOTED FOR PARTY SCORED 10 ON POPULISM SCALE
 - 97. NOT APPLICABLE
 - 98. NO POPULISM SCORE ASSIGNED
 - 99. MISSING

| CSES QUESTION CLASSIFICATION: DERIVATIVE VARIABLE (BASED ON CORE)

| VARIABLE NOTES: F3100_POP_CSES

| F3100_POP_CSES links the respondents' reported vote choice in the
 | main election with the CSES Collaborators experts' judgment of
 | the party the respondent reported voting for on the populism
 | scale (0-10).

| F3100_POP_CSES is available for voters who reported voting for a
 | party where expert judgments are available (i.e., for parties
 | receiving an alphabetical classification by CSES). For more
 | details on which parties/coalitions receive alphabetical
 | classification see "CSES MODULE 6 CODING OF PARTIES/COALITIONS
 | & LEADERS" in Codebook Part 3.

| F3100_POP_CSES assigns respondents a score based on respondents'
 | reported vote choice and the corresponding CSES Collaborators
 | expert placement of the party voted for on the populism scale.
 | This variable hence links the CSES Collaborator expert judgment
 | with the reported vote of the respondent in the main election.

Here, a respondent who reports voting for a party/candidate of PARTY A is assigned the value the CSES Collaborator gave to PARTY A in the said election on the populism scale (and so on for PARTY B, PARTY C etc...).

Collaborators assign parties scores on an 11-point scale ranging from "0. NOT AT ALL POPULIST" to "10. VERY POPULIST" for all parties assigned an alphabetical code by CSES. The expert judgment data by party used for coding F3100_POP_CSES is available in variable F5031_.

For classifying parties on the populism scale, Collaborators were provided with the following definition:

"Definition: Populism can be defined as a thin-centered ideology that pits a virtuous and homogeneous people against a set of elites and dangerous 'others' who are depicted as depriving 'the people' of their rights, values, prosperity, identity, and voice. The emphasis on anti-elite/ anti-establishment rhetoric and the contrast between the 'pure people' and the 'corrupt elite' are thus indications of the degree to which a party is populist. Populist parties can be found across the left-right ideological spectrum."

F3100_POP_CSES is coded based on respondents' vote choice in the main election.

CSES classifies the main election based on the regime (executive) type and the election in which the CSES survey has been administered. For polities rated as parliamentary systems, CSES classifies the main election as elections to the lower house for most studies. It deviates for a few cases when elections to the upper house constitutes the main election, usually due to the respective CSES study focusing on the upper house contest. For polities rated as Presidential systems, CSES conventionally classifies the main election as the Presidential election. It sometimes deviates when data for the Presidential election is unavailable (e.g., when the CSES survey was administered in a midterm election). For polities rated as mixed systems, CSES has tended to classify the main election as elections to the lower house. However, it sometimes deviates depending on data availability. Users are advised to consult the table listed in VARIABLE NOTES for F3010_ME specifying the main election for each study in CSES for specific details.

Some parties/coalitions have scores in F3100_POP_CSES that are not round numbers, e.g., 1.5 or 5.5. These scores can reflect Collaborator judgments or reflect the classification of a coalition. Sometimes respondents report voting for a coalition, but Collaborators score parties that comprise this coalition separately on the populism scale. The score used for F3100_POP_CSES is the mean of populism scores of parties that comprise the given coalition. All of these instances are detailed in ELECTION STUDY NOTES below.

```

| Sometimes parties' levels of populism are hard to determine.
| These instances are detailed in ELECTION STUDY NOTES for
| variable F5031_.
|
| Data are unavailable for FRANCE (2022), SLOVENIA (2022), TAIWAN
| (2024) and UNITED STATES (2024).
|
| ELECTION STUDY NOTES - MONTENEGRO (2023): F3100_POP_CSES
|
| NUMERICAL CODE 499002: Together! was an alliance formed for
| the 2023 Montenegrin lower house election. Its members were:
| - NUMERICAL CODE 499002: Democratic Party of Socialists (DPS)
|                               (populism score = 4)
| - NUMERICAL CODE 499097: Social Democrats of Montenegro (SD)
|                               (populism score = 3)
| - NUMERICAL CODE 499015: Liberal Party of Montenegro (LP)
|                               (populism score = 2)
| - Democratic Union of Albanians (DUA) (populism score = 7)
|
| Thus, the score for Together! for F3100_POP_CSES is 4.
|
| NUMERICAL CODE 499003: For the Future of Montenegro was an
| alliance formed for the 2023 Montenegrin lower house election.
| Its members were:
| - NUMERICAL CODE 499003: New Serbian Democracy (NSD)
|                               (populism score = 6)
| - NUMERICAL CODE 499098: Democratic People's Party (DNP)
|                               (populism score = 6)
| - Workers' Party (RP) (populism score = 8)
|
| Thus, the score for For the Future of Montenegro coalition for
| F3100_POP_CSES is 6.7.
|
| NUMERICAL CODE 499004: Aleksa and Dritan - Count Bravely!
| (Demokrate-URA) was an alliance formed for the 2023 Montenegrin
| lower house election. Its members were:
| - NUMERICAL CODE 499004: United Reform Action (URA)
|                               (populism score = 7)
| - NUMERICAL CODE 499099: Democratic Montenegro (Demokrate)
|                               (populism score = 8)
|
| Thus, the score for Count Bravely! for F3100_POP_CSES is 7.5.
|
| NUMERICAL CODE 499006: SNP-DEMOS was an alliance formed for the
| 2023 Montenegrin lower house election. Its members were:
| - NUMERICAL CODE 499006: Socialist People's Party of Montenegro
|                               (SNP) (populism score = 5)
| - NUMERICAL CODE 499016: Democratic Alliance (DEMOS)
|                               (populism score = 6)
|
| Thus, the score for Count Bravely! for F3100_POP_CSES is 5.5.
|
| ELECTION STUDY NOTES - POLAND (2023): F3100_POP_CSES
|

```

```

=====
| NUMERICAL CODE 616001: United Right (ZP) was an electoral
| coalition between the following parties:
| - NUMERICAL CODE 616001: Law and Justice (Populism score = 8)
| - NUMERICAL CODE 616007: Sovereign Poland (SP)
|   (Populism score = 9)
| - and other smaller parties for the 2023 election.
|
| Thus, the score for the coalition in 2023 for F3100_POP_CSES is
| 8.5.
|
| NUMERICAL CODE 616002: Civic Coalition (KO) was an electoral
| coalition between the following parties:
| - NUMERICAL CODE 616002: Civic Platform (PO) (Populism score = 5)
| - NUMERICAL CODE 616008: Modern (Nowo)
| - and other smaller parties for the 2023 election.
|
| As collaborators provided a rating for the PO only, the score for
| the KO Coalition in 2023 for F3100_POP_CSES is 5.
|
| NUMERICAL CODE 616003: Third Way (KP) was an electoral coalition
| between the following parties:
| - NUMERICAL CODE 616003: Szymon Hołownia's Poland 2050 (PL2050)
|   (Populism Score = 4)
| - NUMERICAL CODE 616005: Polish People's Party (PSL)
|   (Populism score = 5)
| - and other smaller parties for the 2023 election.
|
| Thus, the score for the coalition in 2023 for F3100_POP_CSES is
| 4.5.
|
| NUMERICAL CODE 616004: The Left was an alliance for the 2023
| election between several smaller parties and the following
| members:
| - NUMERICAL CODE 616004: New Left (NL) (Populism score = 5)
| - NUMERICAL CODE 616008: Left Together (Razem)
|   (Populism score = 6)
|
| Thus, the score for The Left for F3100_POP_CSES is 5.5.
|
| ELECTION STUDY NOTES - PORTUGAL (2024): F3100_POP_CSES
|
| NUMERICAL CODE 620101: Democratic Alliance (AD) was an electoral
| coalition for the 2024 election between the following parties:
| - NUMERICAL CODE 620101: Social Democratic Party (PPD/PSD)
|   (Populism score = 0)
| - NUMERICAL CODE 620109: Democratic and Social Center - People's
|   Party (CDS-PP) (Populism score = 0)
|
| Thus, the score for the coalition in 2024 for F3100_POP_CSES is
| 0.
|
| ELECTION STUDY NOTES - SLOVAKIA (2023): F3100_POP_CSES
|
| For the NUMERICAL CODE 703004, the score in F3100_POP_CSES

```

| refers exclusively to the expert rating of Ordinary People -
 | Independent Personalities (OLaNO), even though respondents
 | were able to indicate voting for an alliance in F3011_LH_PL
 | (OLaNO and Friends, NUMERICAL CODE 703004).

 F3100_IF_CSES >>> CURRENT MAIN ELECTION - VOTE CHOICE LINKED WITH
 CSES COLLABORATOR EXPERT JUDGMENT IDEOLOGICAL FAMILY

Respondents' reported party choice in the main election linked with
 the CSES Collaborators experts' judgment of the party's ideological
 family.

.....

- 90. VOTED PARTY CLASSIFIED AS OTHER

- 97. NOT APPLICABLE
- 98. NO IDEOLOGICAL FAMILY MENTIONED
- 99. MISSING

| CSES QUESTION CLASSIFICATION: DERIVATIVE VARIABLE (BASED ON CORE)

| VARIABLE NOTES: F3100_IF_CSES

| F3100_IF_CSES links the respondents' reported vote choice in the
 | main election with the CSES Collaborators experts' judgment of
 | the ideological family of the party the respondent reported
 | voting for.

| F3100_IF_CSES is available for voters who reported voting for a
 | party where expert judgments are available (i.e., for parties
 | receiving an alphabetical classification by CSES). For more
 | details on which parties/coalitions receive alphabetical
 | classification see "CSES MODULE 6 CODING OF PARTIES/COALITIONS
 | & LEADERS" in Codebook Part 3.

F3100_IF_CSES assigns respondents a score based on respondent reported vote choice and the corresponding CSES Collaborators expert judgments of the party's ideological family. The expert judgment data by party is available in variable F5028_.

F3100_IF_CSES links the CSES Collaborator expert judgment with the reported vote of the respondent in the main election. Here, a respondent who reports voting for a party/candidate of PARTY A is assigned the value the CSES Collaborator gave to PARTY A in the said election on the left-right scale (and so on for PARTY B, PARTY C etc...).

CSES classifies the main election based on the regime (executive) type and the election in which the CSES survey has been administered. For polities rated as parliamentary systems, CSES classifies the main election as elections to the lower house for most studies. It deviates for a few cases when elections to the upper house constitutes the main election, usually due to the respective CSES study focusing on the upper house contest. For polities rated as Presidential systems, CSES conventionally classifies the main election as the Presidential election. It sometimes deviates when data for the Presidential election is unavailable (e.g., when the CSES survey was administered in a midterm election). For polities rated as mixed systems, CSES has tended to classify the main election as elections to the lower house. However, it sometimes deviates depending on data availability. Users are advised to consult the table listed in VARIABLE NOTES for F3010_ME specifying the main election for each study in CSES for specific details.

In some instances, CSES Collaborators provide additional information to the characterization, and when applicable, these are detailed in the ELECTION STUDY NOTES for variable F5028_.

Users are advised that the same party might have been coded as belonging to different party families across different elections. These differences may reflect actual changes in parties' ideological positions across time. Alternatively, they might reflect disagreement on different experts on which ideological family the respective party belongs to, whenever national Collaborators changed between election studies.

Data are unavailable primarily because Collaborator expert judgments of parties were not provided for certain election studies.

Data are unavailable for TAIWAN (2024) and UNITED STATES (2024).

ELECTION STUDY NOTES - SLOVAKIA (2023): F3100_IF_CSES

For the NUMERICAL CODE 703004, the score in F3100_IF_CSES refers exclusively to the expert rating of Ordinary People -

| Independent Personalities (OLaNO), even though respondents
| were able to indicate voting for an alliance in F3011_LH_PL
| (OLaNO and Friends, NUMERICAL CODE 703004).

=====

))) CSES MODULE 6 VARIABLES: DISTRICT-LEVEL DATA

=====

- | VARIABLE NOTES:
- |
- | (1) Respondents' electoral districts are reported in F2019,
| with labels listed in Part 4 of the CSES Codebook.
- |
- | (2) According to the different types of elections included in
| this CSES release, the tables below provide an overview of
| each polity and to which election the district data
| pertains to, detail the number of districts in total in
| each state and the number of these districts which are
| sampled by studies included in CSES, and provide information
| about the electoral tier (where applicable) to which the
| district data pertain to. Users are advised to consult these
| tables carefully to decide which data is appropriate for
| their analyses.
- |
- | (3) In mixed systems, such as Germany or New Zealand, district
| data refers to the constituency vote (as opposed to the
| list-PR vote).
- |
- | (4) There are two versions of each district-level variable.
| Most election studies are coded into F4001-F4007. For
| polities that operate one nationwide electoral district,
| district data are coded into variables F4001_N-F4007_N
| to specifically highlight one nationwide district polities.

| +++ TABLE: SUMMARY OF POLITY AND WHICH ELECTION IN THAT POLITY
| THAT THE DISTRICT DATA REFERS TO

POLITY (ELEC YEAR)	Presidential Election	Lower House Election	Upper House Election

AUSTRALIA (2022)	-	X	-

TURKIYE (2023)	-	X	-
UNITED STATES (2024)	X	-	-

KEY: X = yes; - = no.

+++ TABLE: TOTAL NUMBER OF ELECTORAL DISTRICTS PER POLITY AND
TOTAL NUMBER OF ELECTORAL DISTRICTS REPRESENTED IN
CSES DATA

POLITY (ELEC YEAR)	Total number of Electoral Districts in Polity	Total number of Electoral Districts in CSES (% coverage of N of districts)
AUSTRALIA (2022)	151	151 (100%)
BRAZIL (2022)	27	27 (100%)
DENMARK (2022)	10	10 (100%)
FRANCE (2022)	1	1 (100%)
MONTENEGRO (2023)	1	1 (100%)
NEW ZEALAND (2023)	72	72 (100%)
NORTH MACEDONIA (2024)	6	6 (100%)
POLAND (2023)	41	41 (100%)
PORTUGAL (2022)	22	17 (77%)
PORTUGAL (2024)	22	14 (64%)
SLOVAKIA (2023)	1	1 (100%)
SWEDEN (2022)	29	29 (100%)
SWITZERLAND (2023)	26	26 (100%)
TAIWAN (2024)	73	40 (55%)
TURKIYE (2023)	87	54 (62%)
UNITED STATES (2024)	51	51 (100%)

District identifiers and data are unavailable for AUSTRIA (2024)
and SLOVENIA (2022).

In polities using more than one electoral tier, district data
refer to the lower tier. (see variable F5038_ for information
about the number of electoral tiers and further details about
the tiers).

MONTENEGRO (2023) and SLOVAKIA (2023) use a single, nationwide
district.

The district data for FRANCE (2022) and UNITED STATES (2024)
refer to the Presidential Elections.

Used Sources on Election District Variables, if possible
including URL and date accessed.

 F4001 >>> NUMBER OF SEATS IN DISTRICT

The number of seats contested in district.

001-900. NUMBER OF SEATS CONTESTED IN ELECTORAL DISTRICT

997. NOT APPLICABLE

999. MISSING

| VARIABLE NOTES: F4001

| F4001 details the number of seats contested in each district of
 | the first segment of the lower house of the legislature.

| Data are unavailable for AUSTRIA (2024).

| ELECTION STUDY NOTES - UNITED STATES (2024): F4001

|
 | F4001 reports the number of electoral college votes allocated to
 | each state in the U.S. Presidential election and not the number
 | of congressional seats in each district.
 | Considering that the United States uses an electoral college
 | system that operates on the state level for Presidential
 | elections, the country's main election, district data were
 | collected accordingly. The U.S. state a respondent lives in is
 | coded in F2018 (REGION OF RESIDENCE). Variable F2019 reports the
 | respondent's lower house district.

 F4001_N >>> NUMBER OF SEATS IN DISTRICT - NATIONWIDE ELECTORAL DISTRICT

The number of seats contested in nationwide electoral district.

001-900. NUMBER OF SEATS CONTESTED IN ELECTORAL DISTRICT

997. NOT APPLICABLE: NO NATIONWIDE DISTRICT

999. MISSING

| VARIABLE NOTES: F4001_N

|
 | F4001_N details the number of seats contested in each district
 | in the first tier of the lower house elections for polities
 | operating a nationwide electoral district.

 F4002 >>> NUMBER OF CANDIDATES IN DISTRICT

The number of candidates contesting seats in district.

0001-9000. NUMBER OF CANDIDATES WHO CONTESTED THE
 ELECTION IN THIS ELECTORAL DISTRICT

9997. NOT APPLICABLE

9999. MISSING

| VARIABLE NOTES: F4002

|
 | F4002 details the number of candidates who contested seats in
 | each district. Data are reported for electoral systems where
 | voters cast ballots for candidates directly and in PR-list
 | systems where voters may cast a candidate preference vote (i.e.,

| where a voter can indicate a candidate from a party list, in
 | addition to casting a ballot for a party list).

| Data are unavailable for AUSTRIA (2024).

| ELECTION STUDY NOTES - NEW ZEALAND (2023): F4002

| The number of candidates in district 39 (Port Waikato) includes
 | the candidate Neil Christensen who died during the campaign.
 | Because of his death, by-elections for the electorate vote were
 | scheduled later in the year. Voters still cast their party vote
 | on election day.

| ELECTION STUDY NOTES - SWEDEN (2022): F4002

| For SWEDEN (2022), F4002 counts the unique candidate numbers of
 | valid candidacies by district, as provided by the Swedish
 | Election Authority. Hence, F4002 also counts candidates who did
 | not receive any candidate preference votes.
 | Raw data on candidacies were extracted from
 | [https://www.val.se/valresultat/riksdag-region-och-kommun/2022/](https://www.val.se/valresultat/riksdag-region-och-kommun/2022/radata-och-statistik#Kandidaturerinforval2022)
 | [radata-och-statistik#Kandidaturerinforval2022](https://www.val.se/valresultat/riksdag-region-och-kommun/2022/radata-och-statistik#Kandidaturerinforval2022) from the
 | "Kandidaturer infor val 2022" section of the webpage.
 | (Date accessed: April 07, 2025).

| ELECTION STUDY NOTES - UNITED STATES (2024): F4002

| This variable reports the number of candidates in the federal
 | state instead of in the respondents' electoral district.

| For some states, the official election results
 | published by the Federal Election Commission
 | ([https://www.fec.gov/resources/cms-content/documents/](https://www.fec.gov/resources/cms-content/documents/2024presgeresults.pdf)
 | [2024presgeresults.pdf](https://www.fec.gov/resources/cms-content/documents/2024presgeresults.pdf); Date accessed: April 02, 2025)
 | indicate that there were more candidates than named in the
 | document by including a 'scattered' category summarizing
 | write-in votes. Such candidates are not included in F4002.

 F4002_N >>> NUMBER OF CANDIDATES IN DISTRICT - NATIONWIDE ELECTORAL
 DISTRICT

The number of candidates contesting seats in nationwide district.

0001-9000. NUMBER OF CANDIDATES WHO CONTESTED THE
 ELECTION IN THIS ELECTORAL DISTRICT

9997. NOT APPLICABLE: NO NATIONWIDE DISTRICT

9999. MISSING

VARIABLE NOTES: F4002_N

F4002_N details the number of candidates who contested seats for countries operating only one nationwide electoral district. These data are reported for electoral systems where voters cast ballots for candidates directly and in PR-list systems where voters may cast a candidate preference vote (i.e., where a voter can indicate a candidate from a party list, in addition to casting a ballot for a party list) nationwide.

F4003 >>> NUMBER OF PARTY LISTS IN DISTRICT

The number of parties presenting lists in district.

001-900. NUMBER OF PARTIES THAT PRESENTED A LIST OF CANDIDATES IN THE ELECTION IN THIS ELECTORAL DISTRICT

997. NOT APPLICABLE

999. MISSING

VARIABLE NOTES: F4003

F4003 details the number of parties that presented lists and, thereby, contested seats in each district. These data are only relevant for PR-list electoral systems where voters cast ballots for party lists. Countries that do not employ a pure PR-list system or any form of mixed electoral system are classified as "997. NOT APPLICABLE".

Data are unavailable for AUSTRIA (2024).

ELECTION STUDY NOTES - SWEDEN (2022): F4003

For SWEDEN (2022), this variable provides the number of parties which registered participation before the election, as required by the Swedish Election Authority. The Swedish system allows for apparentment in which multiple lists with the same party label in a given constituency can form a cartel. In these cases, parties were only counted once, in line with this variable's intention to count the parties that presented lists rather than the total number of lists provided by parties.

F4003_N >>> NUMBER OF PARTY LISTS IN DISTRICT - NATIONWIDE ELECTORAL

DISTRICT

The number of parties presenting lists in nationwide district.

001-900. NUMBER OF PARTIES THAT PRESENTED A LIST OF
 CANDIDATES IN THE ELECTION IN THIS ELECTORAL
 DISTRICT

997. NOT APPLICABLE: NO NATIONWIDE DISTRICT

999. MISSING

| VARIABLE NOTES: F4003_N

| F4003_N details the number of parties that presented lists and,
 | thereby, contested seats for polities operating a nationwide
 | electoral district.
 | These data are only relevant for PR-list electoral systems where
 | voters cast ballots for party lists and where the country has a
 | single electoral constituency with the country operating as a
 | nationwide district. Countries that do not employ a PR-list
 | system are classified as "997. NOT APPLICABLE."

F4004_A	>>> PERCENT VOTE IN DISTRICT - PARTY A
F4004_B	>>> PERCENT VOTE IN DISTRICT - PARTY B
F4004_C	>>> PERCENT VOTE IN DISTRICT - PARTY C
F4004_D	>>> PERCENT VOTE IN DISTRICT - PARTY D
F4004_E	>>> PERCENT VOTE IN DISTRICT - PARTY E
F4004_F	>>> PERCENT VOTE IN DISTRICT - PARTY F
F4004_G	>>> PERCENT VOTE IN DISTRICT - PARTY G
F4004_H	>>> PERCENT VOTE IN DISTRICT - PARTY H
F4004_I	>>> PERCENT VOTE IN DISTRICT - PARTY I

The proportion of votes cast in favor of PARTY [A/B/C/D/E/F/G/H/I]
 in district (first round).

000.00-100.00 PERCENT (0.00% TO 100.00%) OF THE VALID
 BALLOTS CAST IN THIS DISTRICT THAT WERE
 CAST IN FAVOR OF PARTY [A/B/C/D/E/F]

997.00 NOT APPLICABLE

999.00. MISSING

| VARIABLE NOTES: F4004_

| Parties and their alphabetical classifications for each election
| study are detailed in Part 3 of the CSES Codebook.

| F4004_ detail the proportion of votes cast in favor of PARTIES
| A-I in each district. In majoritarian systems in which more than
| one round of elections are held, F4004_ refer to the FIRST
| round.

| Data are unavailable for AUSTRIA (2024).

| ELECTION STUDY NOTES - AUSTRALIA (2022): F4004_

| F4004_ report the percentage of first preference votes by
| district in the election.
| Researchers are advised that data for F4004_G (referring to the
| Liberal Democratic Party) were retrieved on November 26, 2024,
| unlike all other district data for Australia, which were
| collected in August 2023.

| ELECTION STUDY NOTES - NEW ZEALAND (2023): F4004_

| The variables F4004_ are coded as "997. NOT APPLICABLE" for
| District 39 (Port Waikato) because the electorate vote was
| canceled due to the death of a candidate, Neil Christensen,
| during the campaign. As a result, a by-election for the
| electorate vote was scheduled later in the year. However, voters
| in Port Waikato still cast their party vote on the general
| election day.

| ELECTION STUDY NOTES - PORTUGAL (2024): F4004_A & F4004_I

| PARTY A (Social Democratic Party, PPD/PSD) and PARTY I
| (Democratic and Social Center - People's Party, CDS-PP) contested
| the 2024 legislative elections jointly, forming the Democratic
| Alliance. F4004_A reports the percent of the vote by district for
| the Democratic Alliance. F4004_I is coded as missing.

| ELECTION STUDY NOTES - UNITED STATES (2024): F4004_

| F4004_ reports the results of the Presidential election
| in the federal states. The results published reflect those
| as published by the Federal Election Commission
| ([https://www.fec.gov/resources/cms-content/documents/](https://www.fec.gov/resources/cms-content/documents/2024presgeresults.pdf)
| 2024presgeresults.pdf; Date accessed: April 02, 2025).

The number of seats gained by PARTY [A/B/C/D/E/F/G/H/I] in
district.

00-99. SEATS

997. NOT APPLICABLE

999. MISSING

VARIABLE NOTES: F4005_
Parties and their alphabetical classifications for each election study are detailed in Part 3 of the CSES Codebook.
Data are unavailable for AUSTRIA (2024).

ELECTION STUDY NOTES - AUSTRALIA (2022): F4005_
For the Australian 2022 lower house election, there are 12 districts in which candidates not affiliated with PARTY A-G won. Hence, variables F4005_A-G are coded 0 for all respondents from these 12 districts. The table below lists the winning candidates in these districts and their party affiliation, if applicable:

F2019 Code and District	Winning Candidate (Party)
00015. Fowler	Dai Le (Independent)
00026. Mackellar	Sophie Scamps (Independent)
00032. North Sydney	Kylea Jane Tink (Independent)
00043. Warringah	Zali Steggall (Independent)
00045. Wentworth	Allegra Spender (Independent)
00064. Goldstein	Zoe Daniel (Independent)
00069. Indi	Helen Haines (Independent)
00072. Kooyong	Monique Ryan (Independent)
00102. Kennedy	Bob Katter (Katter's Australia Party)
00123. Mayo	Rebekha Sharkie (Center Alliance)
00130. Curtin	Kate Chaney (Independent)
00143. Clark	Andrew Wilkie (Independent)

ELECTION STUDY NOTES - NEW ZEALAND (2023): F4005_
The variables F4005_ are coded as "997. NOT APPLICABLE" for District 39 (Port Waikato) because the electorate vote was canceled due to the death of a candidate, Neil Christensen, during the campaign. As a result, a by-election for the electorate vote was scheduled later in the year. However, voters in Port Waikato still cast their party vote on the general election day.

ELECTION STUDY NOTES - PORTUGAL (2024): F4005_A & F4005_I
PARTY A (Social Democratic Party, PPD/PSD) and PARTY I (Democratic and Social Center - People's Party, CDS-PP) contested the 2024 legislative elections jointly, forming the Democratic Alliance. F4005_A reports the seats obtained by district for the Democratic Alliance. F4005_I is coded as missing.

| ELECTION STUDY NOTES - UNITED STATES (2024): F4005_
|
| Instead of the number of seats gained by party, F4005_ reports
| the number of electoral college votes obtained by the
| Presidential candidates of the 2024 U.S. Presidential Election.

F4005_A_N >>> SEATS IN DISTRICT - PARTY A - NATIONWIDE ELECTORAL DISTRICT
F4005_B_N >>> SEATS IN DISTRICT - PARTY B - NATIONWIDE ELECTORAL DISTRICT
F4005_C_N >>> SEATS IN DISTRICT - PARTY D - NATIONWIDE ELECTORAL DISTRICT

F4005_H_N >>> SEATS IN DISTRICT - PARTY H - NATIONWIDE ELECTORAL DISTRICT
F4005_I_N >>> SEATS IN DISTRICT - PARTY I - NATIONWIDE ELECTORAL DISTRICT

The number of seats gained by party [A/B/C/D/E/F/G/H/I] in
nationwide district.

00-99. SEATS

997. NOT APPLICABLE: NO NATIONWIDE DISTRICT

999. MISSING

| VARIABLE NOTES: F4005_A-I_N
|
| Parties and their alphabetical classifications for each election
| study are detailed in Part 3 of the CSES Codebook.
|
| F4005_A-I_N details the number of seats gained by PARTIES A-I
| for polities operating a nationwide electoral district.

F4006 >>> TURNOUT IN DISTRICT

The official voter turnout in district.

000.00-100.00 PERCENT OF VOTER TURNOUT BY DISTRICT

997.00. NOT APPLICABLE

999.00. MISSING

| VARIABLE NOTES: F4006

=====

| Users should note that official turnout figures are calculated using different formulas. For instance, the denominator sometimes includes the total number of the voting-age population, while other times it is the total number of registered voters.

| Data are unavailable for AUSTRIA (2024).

| ELECTION STUDY NOTES - NEW ZEALAND (2023): F4006

| Variable F4006 is coded as "997. NOT APPLICABLE" for District 39 (Port Waikato) because the electorate vote was canceled due to the death of a candidate, Neil Christensen, during the campaign. As a result, a by-election for the electorate vote was scheduled later in the year. However, voters in Port Waikato still cast their party vote on the general election day.

| ELECTION STUDY NOTES - TURKIYE (2023): F4006

| Turnout for Turkiye (2023) as reported by the Supreme Electoral Council (YSK) is based on the number of registered voters, excluding voters from overseas.

| ELECTION STUDY NOTES - UNITED STATES (2024): F4006

| This variable indicates the turnout in the Presidential election by federal state. The turnout is calculated with the denominator being the voting age population (VAP).

| A different source other than the Federal Election Commission had to be consulted for F4006 as the Federal Election Commission does not provide an estimate of the size of the the electorate, hence making an estimate of turnout impossible. Instead, data from the University of Florida Election Lab is used (see: <https://election.lab.ufl.edu/2024-general-election-turnout/>, Date accessed: April 02, 2025).

| The UF Election Lab also provides information on the voting eligible population (VEP), which calculates turnout based on eligibility, rather than the Voting Age Population. Analysts may refer to the website link above to access this data.

F4006_N >>> TURNOUT IN DISTRICT - NATIONWIDE ELECTORAL DISTRICT

The official voter turnout in nationwide district.

.....

000.00-100.00 PERCENT OF VOTER TURNOUT BY DISTRICT

997.00. NOT APPLICABLE: NO NATIONWIDE DISTRICT

999.00. MISSING

| VARIABLE NOTES: F4006_N

| F4006_N details official voter turnout for polities operating a nationwide electoral district.

| Users should note that official turnout figures are calculated using different formulas. For instance, the denominator sometimes includes the total number of the voting-age population, while other times it is the total number of registered voters.

 F4007 >>> SIZE OF ELECTORATE OR POPULATION IN DISTRICT

The size of the electorate in district.

00,000,000.-90,000,000. SIZE OF ELECTORATE

99,999,997. NOT APPLICABLE

99,999,999. MISSING

| VARIABLE NOTES: F4007

| Data are unavailable for AUSTRIA (2024).

| ELECTION STUDY NOTES - TURKIYE (2023): F4007

| For Turkiye (2023), the number of registered voters as coded in F4007 and reported by the Supreme Electoral Council (YSK) excludes eligible voters from overseas.

| ELECTION STUDY NOTES - UNITED STATES (2024): F4007

| This variable indicates the Voting Age Population (VAP) in the 2024 Presidential election by federal state.

| A different source other than the Federal Election Commission had to be consulted for F4007 as the Federal Election Commission does not provide an estimate of the size of the the electorate. Instead, data from the University of Florida Election Lab is used

| (see: <https://election.lab.ufl.edu/2024-general-election-turnout/>, Date accessed: April 02, 2025).

| The UF Election Lab also provides information on the Voting Eligible Population (VEP). Analysts may refer to the website link above to access this data.

F4007_N >>> SIZE OF ELECTORATE OR POPULATION IN DISTRICT -
 NATIONWIDE ELECTORAL DISTRICT

The size of the electorate in nationwide district.
.....

00,000,000.-90,000,000. SIZE OF ELECTORATE

99,999,997. NOT APPLICABLE: NO NATIONWIDE DISTRICT

99,999,999. MISSING

| VARIABLE NOTES: F4007_N

|
| F4007_N details the size of the electorate for polities operating
| a nationwide electoral district.

Numeric Party Code Identifier for Parties A-I (see variable notes).
.....

008001-858009. PARTY/COALITION NUMERICAL IDENTIFIER
 [SEE PART 3 OF CODEBOOK FOR NUMERICAL PARTY/
 COALITION CODES]

999999. MISSING

| VARIABLE NOTES: F5000_
|

CSES policy is that for alphabetical codes, parties A through F are the six most popular parties/coalitions, ordered in descending order of their share of the popular vote in the parliamentary election (unless otherwise stated). Parties G, H, and I are supplemental parties. They may, but do not have to, accord with how parties A-F are ordered and often reflect important or notable parties within a country or members of party coalitions. As codes in F5000_ are labeled with the corresponding party names, they allow for easy identification of the relational data.

For the CSES MODULE 6 dataset, alphabetical codes are used to identify the following:

- Respondent's likability of the party/coalition (variable F3018_).
- Respondent's left-right placement of the party/coalition (variable F3020_).
- Respondent's placement of the party/coalition on an alternative scale (variable F3021_).
- Election Results: percentage of vote for each party/coalition in the lower house (variable F5001_).
- Election Results: percentage of seats for each party/coalition in the lower house (variable F5002_).
- Election Results: percentage of vote for each party/coalition in the upper house (variable F5003_).
- Election Results: percentage of seats for each party/coalition in the upper house (variable F5004_).
- Election Results: percentage of vote for each party/coalition in the first round of the Presidential election (variable F5005_).
- Election Results: percentage of vote for each party/coalition in the second round of the Presidential election (variable F5005_).
- Number of cabinet portfolios held by each party/coalition before the election (variable F5021_).
- Number of cabinet portfolios held by each party/coalition after the election (variable F5022_).
- Expert judgments by the national Collaborators of the said party/coalition's ideological family placement (variable F5028_).
- Expert judgments by the national Collaborators of the said party/coalition's left-right placement (variable F5029_).
- Expert judgments by the national Collaborators of the said party/coalition's placement on an alternative scale (variable F5030_).
- Expert judgments by the national Collaborators of the said party/coalition's placement on the populism scale (variable F5031_).
- Manifesto research on political representation identifier for each party/coalition (variable F5200_).
- Parliaments and Governments (ParlGov) identifier for each party/coalition (variable F5201_).
- The said party/coalition's Chapel Hill Expert Survey (CHES)

| Identifier (variable F5202).
 | - The said party/coalition's Party Facts Identifier
 | (variable F5203_).
 |
 | In most cases, the alphabetical party codes correspond to the
 | alphabetical code for the leader of that same party (e.g.,
 | LEADER A is the leader of PARTY A). However, there are
 | exceptions, such as in instances in which data is available for
 | two leaders of the same party.
 | Parties/coalitions and their numerical and alphabetical
 | classifications for each election study are detailed in Part 3 of
 | the CSES Codebook.

```

F5000_L_H    >>> LEADER H IDENTIFIER - NUMERICAL
F5000_L_I    >>> LEADER I IDENTIFIER - NUMERICAL
-----
```

Numeric Party Code Identifier for Leaders A-I (see variable notes).

008001-858003. PARTY/COALITION NUMERICAL IDENTIFIER & LEADER NAME
 [SEE PART 3 OF CODEBOOK FOR NUMERICAL PARTY/
 COALITION CODES]

999999. MISSING

| VARIABLE NOTES: F5000_L_
 |
 | CSES policy is that for alphabetical codes, leaders A through F
 | tend to be the leaders of the six most popular parties/
 | coalitions or the Presidential candidates of these parties.
 | They correspond to parties A-F (i.e., Leader A will be related to
 | Party A in some way, Leader B will be related to Party B, etc.).
 | Leaders G, H, and I are supplemental leaders. They may be related
 | to parties G, H, or I, but they do not have to be. These leaders
 | are voluntarily provided by each country's election study and
 | often include data about additional personalities of interest.
 | For example, in a parliamentary system, data about a President
 | might be provided, even if the Presidency is not being contested.
 | On many occasions, slots for Leaders G, H, and I will include
 | additional data for parties/coalitions that have multiple
 | leaders.
 | As codes in F5000_L_ are labeled with the corresponding leader
 | surnames and acronyms of their associated parties, they allow for

| easy identification of the relational data.
|
| For the CSES M6 dataset, alphabetical leader codes are used to
| identify the following:
| - Respondent's likeability of the leader/personality in question
| (variable F3019_).
| - The said leader/personality's biological sex (F5000_L_ABS-IBS).
|
| Parties/coalitions and their numerical and alphabetical
| classifications for each election study are detailed in Part 3 of
| the CSES Codebook.

F5000_L_ABS >>> LEADER A IDENTIFIER - BIOLOGICAL SEX
F5000_L_BBS >>> LEADER B IDENTIFIER - BIOLOGICAL SEX
F5000_L_CBS >>> LEADER C IDENTIFIER - BIOLOGICAL SEX
F5000_L_DBS >>> LEADER D IDENTIFIER - BIOLOGICAL SEX
F5000_L_EBS >>> LEADER E IDENTIFIER - BIOLOGICAL SEX
F5000_L_FBS >>> LEADER F IDENTIFIER - BIOLOGICAL SEX
F5000_L_GBS >>> LEADER G IDENTIFIER - BIOLOGICAL SEX
F5000_L_HBS >>> LEADER H IDENTIFIER - BIOLOGICAL SEX
F5000_L_IBS >>> LEADER I IDENTIFIER - BIOLOGICAL SEX

Biological Sex of LEADER [A/B/C/D/E/F/G/H/I].

-
- 0. MALE
 - 1. FEMALE
 - 9. MISSING

| VARIABLE NOTES: F5000_L_A-IBS
|
| F5000_L_ABS - F5000_L_IBS detail the biological sex for leaders
| assigned an alphabetical code (A-I) in CSES MODULE 6.
|
| Leader alphabetical classifications and relevant numerical and
| alphabetical classifications of the party they are associated
| with for each election study are detailed in Part 3 of the
| CSES Codebook.
| Also see variables F5000_L_, which provide the numerical codes
| of leaders' associated parties and are labeled with the
| corresponding leader surnames and party acronyms.
|
| In some instances, leader alphabetical and party alphabetical
| classification may not align. These instances are highlighted in
| ELECTION STUDY NOTES in Part 3 of the CSES Codebook.
|
| ELECTION STUDY NOTES - TURKIYE (2023): F5000_L_HBS
|
| For the Party of Greens and the Left Future (YSP, PARTY H),

| respondents were asked to rate the co-chairs of the party,
| Cigdem Kilicgun Ucar (female) and Ibrahim Akin (male) jointly
| in F3018_H. Collaborators note that both leaders are of equal
| importance. Hence, F5000_L_HBS is coded 9. MISSING for Turkiye
| (2023), as the evaluated co-chairs do not share a gender.

II. ELECTION-SPECIFIC AND ELECTORAL RULES DATA

 | coalition member):

| - New Serbian Democracy (NSD)*
 | - Democratic People's Party (DNP)
 | - Workers' Party (RP).

| ELECTION STUDY NOTES - MONTENEGRO (2023): F5002_D

|
 | The data represents the combined vote share of the Aleksa and
 | Dritan - Bravery Counts! (Aleksa and Dritan - HRABRO se broji!)
 | alliance comprising the following parties (asterisk denoting
 | the dominant coalition member):
 | - Democratic Montenegro (Demokrate)*
 | - United Reform Action (URA).

| ELECTION STUDY NOTES - MONTENEGRO (2023): F5002_F

|
 | The data represents the combined vote share of the SNP-DEMOS-FOR
 | YOU (SNP-DEMOS-ZA TEBE) alliance comprising the following
 | parties (asterisk denoting the dominant coalition member):
 | - Socialist People's Party of Montenegro (SNP)
 | - Democratic Alliance (DEMOS).

| ELECTION STUDY NOTES - MONTENEGRO (2023): F5002_G

|
 | PARTY G (Social Democrats of Montenegro, SD) participated in the
 | election as a member of the coalition whose results are
 | presented under Party B.

| ELECTION STUDY NOTES - MONTENEGRO (2023): F5002_H

|
 | PARTY H (Democratic People's Party, DNP) participated in the
 | election as a member of the coalition whose results are
 | presented under Party C.

| ELECTION STUDY NOTES - MONTENEGRO (2023): F5002_I

|
 | PARTY I (Civic Movement United Reform Action, URA) participated
 | in the election as a member of the coalition whose results are
 | presented under Party D.

| ELECTION STUDY NOTES - NORTH MACEDONIA (2024): F5002_A

|
 | PARTY A presents the results for the Coalition "Your Macedonia"
 | VMRO-DPMNE, consisting of 22 political parties. The leading
 | member of this alliance was the Internal Macedonian Revolutionary
 | Organization - Democratic Party for Macedonian National Unity -
 | VMRO-DPMNE.

| ELECTION STUDY NOTES - NORTH MACEDONIA (2024): F5002_B

|
 | PARTY B presents the results for the Coalition for a European
 | Future - SDSM, consisting of 14 political parties. The leading
 | member of this coalition was the Social Democratic Union of
 | Macedonia - SDSM.

| ELECTION STUDY NOTES - NORTH MACEDONIA (2024): F5002_C

|
 | PARTY C presents the results for the Coalition "European Front",
 | consisting of nine political parties. The leading member of
 | this coalition was the Democratic Union for Integration (DUI).

=====

| ELECTION STUDY NOTES - NORTH MACEDONIA (2024): F5002_D

| PARTY D presents the results for the Vlen Coalition, consisting
| of four political parties. No leading member of this coalition
| was identified by the collaborators.

| ELECTION STUDY NOTES - POLAND (2023): F5002_F

| The data for PARTY F (Konfederacja) presents the results for
| the coalition Konfederacja (Confederation), which is an alliance
| where the leading member was New Hope (NN).

| ELECTION STUDY NOTES - PORTUGAL (2024): F5002_I

| PARTY I (Democratic and Social Center - People's Party, CDS-PP)
| was a minor member of the coalition coded under PARTY A and as
| they competed on a joint list, their electoral results are
| combined and detailed under F5002_A.

| ELECTION STUDY NOTES - SLOVENIA (2022): F5002_

| Of the 90 seats in the Slovene parliament on which F5002_
| classifications are based, two seats (2.2%) are reserved for the
| Italian and Hungarian minorities respectively, and are elected
| through the Borda count with each recognized minority electing
| its own representative in which only members of that minority may
| vote.

| ELECTION STUDY NOTES - TAIWAN (2024): F5002_

| The data report the percentage share of seats that each party
| received resulting from all tiers: the geographical
| constituencies (General; 73 seats), a nationwide closed-list
| proportional tier (34 seats), and two special segments for
| aboriginal populations (six seats).
| Note that the alphabetic party ordering is based on the
| proportional tier since it reflects electoral strength of the
| parties more accurately. Note that two additional seats were
| obtained by Independent candidates.

| ELECTION STUDY NOTES - TURKIYE (2023): F5002_A-H

| Although multiple electoral alliances took part in the 2023
| Turkish parliamentary elections, the presented seat shares
| correspond to individual political parties.

F5003 >>> UPPER HOUSE ELECTION - YES/NO

Was there an upper house election?

.....

- 0. NO: UPPER HOUSE ELECTION
- 1. YES: UPPER HOUSE ELECTION
- 7. NOT APPLICABLE: UNICAMERAL SYSTEM
- 9. MISSING

| VARIABLE NOTES: F5003

| F5003 classifies whether there was an upper house election or not.

| Source of data: Publicly available sources.

| ELECTION STUDY NOTES - AUSTRALIA (2022): F5003

| The election on May 19, 2022 also included a half Senate election whereby 40 senators were elected in total, six for each state (six districts) and two for each Federal Territory (two districts).

```
-----
F5003_A    >>> PERCENT VOTE - UPPER HOUSE - PARTY A
F5003_B    >>> PERCENT VOTE - UPPER HOUSE - PARTY B

F5003_G    >>> PERCENT VOTE - UPPER HOUSE - PARTY G
F5003_H    >>> PERCENT VOTE - UPPER HOUSE - PARTY H
F5003_I    >>> PERCENT VOTE - UPPER HOUSE - PARTY I
-----
```

Percent of popular vote received by PARTY [A/B/C/D/E/F/G/H/I] in the current upper house legislative election.

.....

000.00-100.00 PERCENT OF THE POPULAR VOTE THAT PARTY/COALITION [A/B/C/D/E/F/G/H/I] RECEIVED

996.00 NOT APPLICABLE: UNICAMERAL SYSTEM

997.00 NOT APPLICABLE: NO UPPER HOUSE ELECTION

999.00. MISSING

| VARIABLE NOTES: F5003_

| Parties/coalitions and their numerical and alphabetical classifications for each election study are detailed in Part 3 of

| the CSES Codebook.

| For preferential electoral systems (e.g., Australia, Ireland),
| F5003_ report the first preference vote share of each
| party/coalition, unless otherwise stated in the ELECTION STUDY
| NOTES below.

| For mixed electoral systems (e.g., Germany, Italy, Japan,
| New Zealand), F5003_ report the vote share of the "party list"
| segment for each party/coalition, unless otherwise stated in the
| ELECTION STUDY NOTES below.

| Data are unavailable for SWITZERLAND (2023) and UNITED STATES
| (2024).

| ELECTION STUDY NOTES - AUSTRALIA (2022): F5003_B

| PARTY B (The Liberal Party) combines the results for the Liberal
| National Party (which ran only in Queensland state), the
| Liberal Party (which ran in all other states), and candidates
| who ran under the joint "Liberal-National" ticket.

| ELECTION STUDY NOTES - AUSTRALIA (2022): F5003_F

| PARTY F (National Party) combines the results for the Nationals
| and the Country Liberals, as the latter only ran in the
| Northern Territory. Many National candidates ran under the
| combined Liberal/National banner and their results are included
| under the Liberal Party results (PARTY B) for F5003.

| ELECTION STUDY NOTES - POLAND (2023): F5003_F

| The data for PARTY F (Konfederacja) presents the results for
| the coalition Konfederacja (Confederation), which is an alliance
| where the leading member was New Hope (NN).

| The following parties comprised this alliance:

- | - New Hope (NN), NUMERICAL CODE 616012.
- | - Confederation of the Polish Crown (KKP), NUMERICAL CODE
| 616013.
- | - National Movement (RN).
- | - Real Europe Movement - Europa Christi (RPE).
- | - Real Politics Union (UPR).
- | - Right Wing of the Republic.

| To circumvent the higher electoral threshold applicable to
| electoral coalitions, Konfederacja registered as a party rather
| than alliance for the 2023 election.

| ELECTION STUDY NOTES - SWITZERLAND (2023): F5003

| The Swiss Upper House (Council of States, Staenderat) has 46
| members. Twenty of the country's cantons are represented by two
| Councilors each. Six cantons, traditionally called "half
| cantons", are represented by one Councilor each.
| Vote share data for Switzerland's upper house (Council of States)
| are unavailable because the elections are conducted at canton

| level and most cantons use majority-based, candidate-centered
 | electoral systems rather than proportional party lists. Moreover,
 | election rules can differ by canton, with varying majoritarian
 | electoral formulas and, in some instances, runoff rounds to
 | determine winners. Consequently, no standardized national
 | vote-share for parties is available. However, seat share data is
 | available by party and listed in F5004_.

999.00. MISSING

| VARIABLE NOTES: F5004_

| Parties/coalitions and their numerical and alphabetical
 | classifications for each election study are detailed in Part 3 of
 | the CSES Codebook.

| For mixed electoral systems (e.g., Germany, Italy, Japan,
 | New Zealand), F5004_ report the total seat share for each
 | party/coalition - i.e., the seats an entity won from both the
 | "party list" segment and the "constituency" segment, unless
 | otherwise stated in the ELECTION STUDY NOTES below.
 | In polities where only a portion of the Upper House seats are
 | contested in an electoral cycle (e.g., Australia, Brazil, the
 | United States, F5004_ represent the share of seats won by each
 | party among the contested seats (holdover seats are not included
 | in the classification).

| Source of data: Publicly available sources such as National
 | Election Commissions.

| ELECTION STUDY NOTES - AUSTRALIA (2022): F5004

| The election on May 19, 2022, also included a half Senate election whereby 40 senators were elected in total, six for each state (six districts) and two for each Federal Territory (two districts). The data represent the percentage of seats won in the election and do not include holdover seats.

| ELECTION STUDY NOTES - AUSTRALIA (2022): F5004_A

| PARTY B (The Liberal Party) combines the results for Liberal National Party (which ran only in Queensland state) and the Liberal Party (which ran in all other states), and candidates who ran under the joint "Liberal-National" ticket.

| ELECTION STUDY NOTES - AUSTRALIA (2022): F5004_F

| PARTY F (National Party) combines the results for the Nationals and the Country Liberals, as the latter only ran in the Northern Territory. Many National candidates ran under the combined Liberal/National banner and their seats are included under the Liberal Party results (PARTY B) for F5004.

| ELECTION STUDY NOTES - POLAND (2023): F5004_F

| The data for PARTY F (Konfederacja) presents the results for the coalition Konfederacja (Confederation), which is an alliance where the leading member was New Hope (NN).

| ELECTION STUDY NOTES - UNITED STATES (2024): F5004

| The 2024 elections saw 34 Senate seats contested of the 100 total. The data represents the percentage of seats won by each party (n=34) in the 2024 contest and does not include holdover seats. Including holdover seats, the proportion of seats in the full Senate held by each party post the 2024 elections were:

- | - PARTY A (Republican Party, GOP) - 53.0%
- | - PARTY B (Democratic Party, DEM) - 45.0% (47.0% with Independents).

F5005 >>> PRESIDENTIAL ELECTION ROUND 1 - YES/NO

Was there a Presidential election?

-
- 0. NO: PRESIDENTIAL ELECTION
 - 1. YES: PRESIDENTIAL ELECTION
 - 6. NOT APPLICABLE: NO ROLE OF PRESIDENT

7. NOT APPLICABLE: PRESIDENT NOT SELECTED BY CITIZENS

9. MISSING

VARIABLE NOTES: F5005

F5005 classifies whether there was a Presidential election or not.

NO: PRESIDENTIAL ELECTION classifies circumstances where the role of President exists and is directly elected by citizens but where no Presidential election took place in this cycle.

YES: PRESIDENTIAL ELECTION classifies circumstances where the role of President exists, is directly elected by citizens and where a Presidential election took place this cycle.

NOT APPLICABLE: NO ROLE OF PRESIDENT classifies polities that do not have a Presidential position/office - e.g., constitutional monarchies.

NOT APPLICABLE: PRESIDENT NOT SELECTED BY CITIZENS classifies polities that have a Presidential position/office but the office is not elected by citizens directly - e.g., the President is chosen by parliament or another electoral body.

Source of data: Publicly available sources.

ELECTION STUDY NOTES - SLOVENIA (2022): F5005

The Slovenia (2022) study focuses on the 2022 lower house elections held on April 24, 2022, as specified in F1014 (ELECTION TYPE), with interviews held throughout September to December 2022. However, researchers are advised that Presidential elections were held the same year, i.e., on October 23 (first round) and November 13, 2022 (second round), respectively. Still, F5005 is specified as "0. NO PRESIDENTIAL ELECTION" for Slovenia (2022), given that respondent-level vote choice data are unavailable for the 2022 Slovenian Presidential elections.

ELECTION STUDY NOTES - UNITED STATES (2024): F5005

Since the previous Presidential contest in 2020, the US Congress passed the Electoral Count Reform and Presidential Transition Improvement Act (2022) which elucidated the procedures for counting and certifying Electoral College votes. The legislation clarified the Vice President's ceremonial role, raised the threshold for congressional objections, and created clearer judicial and certification processes in response to the events of January 6, 2021.

F5007 >>> NUMBER OF PARTIES PARTICIPATING IN ELECTION

How many political parties received votes in the election?
.....

001-900. NUMBER OF PARTIES

999. MISSING

| VARIABLE NOTES: F5007

|
| F5007 details the number of participating political parties in
| the election as available by official sources. Data is for the
| Lower House elections unless otherwise stated in ELECTION STUDY
| NOTES below. Independent candidates are not counted. Where
| coalitions are present, constituent parties are counted
| separately if possible.

| Source of data: Publicly available sources such as National
| Election Commissions.

| Data are unavailable for UNITED STATES (2024).

| ELECTION STUDY NOTES - AUSTRALIA (2022): F5007

|
| 34 parties received votes in the Australian House of
| Representatives election of 2022. This calculation counts
| the Liberal and Liberal National Party as separate parties.
| Additionally, the National Party and the Country Liberals that
| run in the Northern Territory are also considered separate
| parties. Furthermore, only seven parties received votes in excess
| of 1% nationally.

| ELECTION STUDY NOTES - DENMARK (2022): F5007

|
| These data represent the number of parties that received votes
| in mainland Denmark only. Including parties contesting in
| Greenland (six) and the Faroe Islands (six), 25 parties received
| votes in total.

| ELECTION STUDY NOTES - MONTENEGRO (2023): F5007

15 electoral lists competed in the election.

The data shown here (25) refers to the number of individual parties taking part in the 2023 Montenegrin parliamentary elections, whether competing individually, or within various electoral coalitions.

ELECTION STUDY NOTES - NEW ZEALAND (2023): F5007

These data represent the number of parties that received list votes (tier 2). An additional 12 unregistered political parties contested in the constituency level (tier 1).

ELECTION STUDY NOTES - NORTH MACEDONIA (2024): F5007

17 electoral lists competed in the parliamentary election. The data shown here (64) refers to the number of individual parties taking part in the 2024 North Macedonian parliamentary elections, whether competing individually, or within various electoral coalitions.

ELECTION STUDY NOTES - PORTUGAL (2022): F5007

23 electoral lists took part in the election. Some of them consisted of party coalitions, so the data represent the number of individual parties, counting parties-coalition members separately.

ELECTION STUDY NOTES - PORTUGAL (2024): F5007

There were 20 electoral lists that took part in the election. Some of them consisted of party coalitions, so the data represent the number of individual parties (21), counting parties-coalition members separately.

ELECTION STUDY NOTES - SWITZERLAND (2023): F5007

These data include votes for minor parties that were reported collectively. These votes could not be disaggregated further due to data limitations.

ELECTION STUDY NOTES - TAIWAN (2024): F5007

The data refers to the first tier (majoritarian) of the legislative election.

F5007_1 >>> EFFECTIVE NUMBER OF ELECTORAL PARTIES

The effective number of electoral parties (ENEP).

00.00-150.00 EFFECTIVE NUMBER OF ELECTORAL PARTIES

997. PRESIDENTIAL ELECTION ONLY - NOT CALCULATED

999. MISSING

| VARIABLE NOTES: F5007_1

| Formula: $ENEP = 1 / (\sum [V_i^2])$ | where V_i represents the vote share of party i , and all
| parties ($i=1,2,...n$) receiving votes are included in the
| calculation.

| Definition based on Laakso, M. and R. Taagepera (1979).

| '"Effective" Number of Parties: A Measure with Application to
| West Europe', Comparative Political Studies 12: 3-27.| The electoral data employed to calculate F5007_1 comes from lower
| house elections, unless the study is focused on upper house
| elections exclusively.| For countries with mixed electoral systems (see F5012_2), the
| electoral returns come from the segment containing the most
| seats. If there are an equal amount of seats in each segment
| the results come from the proportional representation segment,
| unless otherwise stated.| The CSES Secretariat calculates these data for each polity's
| election and cross-checks it against the standard source of data,
| namely:| Gallagher, Michael, 2025. "Election indices dataset" - see:
| https://www.tcd.ie/Political_Science/about/people/michael_gallagher/ElSystems/index.php,
| (Date accessed: November 26, 2025).

| Data are unavailable for UNITED STATES (2024).

| ELECTION STUDY NOTES - DENMARK (2022): F5007_1

| This data is calculated by taking parties that competed in
| mainland Denmark only.

| ELECTION STUDY NOTES - MONTENEGRO (2023): F5007_1

| These data reflect the electoral lists participating in the
| election. Seven of the participating lists were based on
| electoral alliances consisting of multiple political parties.

| ELECTION STUDY NOTES - NORTH MACEDONIA (2024): F5007_1-4

| These data are based on using the results for electoral
| coalitions. Data at the level of individual parties are
| unavailable.

| ELECTION STUDY NOTES - POLAND (2023): F5007_1
 |
 | These data are based on individual parties. It differs from
 | Gallagher's estimate (3.95) as their calculations are based on
 | electoral coalitions.

| ELECTION STUDY NOTES - SLOVENIA (2022): F5007_1-4
 |
 | These data are based on using the results for electoral
 | coalitions. Data at the level of individual parties are
 | unavailable.

| ELECTION STUDY NOTES - TAIWAN (2024): F5007_1
 |
 | These data are based on the votes that each party received
 | in the first tier, which provides the majority (79) seats in the
 | Legislative Yuan (from geographical constituencies, which employ
 | a first-past-the-post system).

 F5007_2 >>> CORRECTED EFFECTIVE NUMBER OF ELECTORAL PARTIES

The Corrected Effective Number of Electoral Parties (CENEP).

.....

00.00-150.00	CORRECTED EFFECTIVE NUMBER OF ELECTORAL PARTIES
997.	PRESIDENTIAL ELECTION ONLY - NOT CALCULATED
999.	MISSING

| VARIABLE NOTES: F5007_2
 |
 | Corrected Effective Number of Electoral Parties corrects for the
 | "other" category using the least component method of bounds
 | suggested by Taagepera. The method requires calculating the
 | ENEP (F5007_1) two times. One is treating the "other" category as
 | a single party, and the second is calculating the ENEP as if
 | every vote in the "other" category belonged to a different party.
 | The CENEP is the mean of both measures.

|
 | Definition based on: Taagepera, R. (1997). 'Effective Number of
 | Parties for incomplete Data', Electoral Studies 16: 145-151.

|
 | The electoral data employed to calculate F5007_2 comes from lower
 | house elections, unless the study is focused on upper house
 | elections exclusively.

| For countries with mixed electoral systems (see F5012_2), the
 | electoral returns come from the segment containing the most
 | seats. If there are an equal amount of seats in each segment
 | the results come from the proportional representation segment,

| unless otherwise stated.
 |
 | The CSES Secretariat calculates these data for each polity's
 | election and cross-checks it against the standard source of data,
 | namely:
 | Gallagher, Michael, 2025. "Election indices dataset" - see:
 | https://www.tcd.ie/Political_Science/about/people/michael_gallagher/ElSystems/index.php,
 | (Date accessed: November 26, 2025).
 |
 | Data are unavailable for UNITED STATES (2024).
 |
 | ELECTION STUDY NOTES - DENMARK (2022): F5007_2
 |
 | This data is calculated by taking parties that competed in
 | mainland Denmark only.
 |
 | ELECTION STUDY NOTES - MONTENEGRO (2023): F5007_2
 |
 | These entries report electoral lists participating in the
 | election. Seven of the participating lists were based on
 | electoral alliances consisting of multiple political parties.
 |
 | ELECTION STUDY NOTES - NORTH MACEDONIA (2024): F5007_1-4
 |
 | These data are based on using the results for electoral
 | coalitions. Data at the level of individual parties are
 | unavailable.
 |
 | ELECTION STUDY NOTES - SLOVENIA (2022): F5007_1-4
 |
 | These data are based on using the results for electoral
 | coalitions. Data at the level of individual parties are
 | unavailable.
 |
 | ELECTION STUDY NOTES - TAIWAN (2024): F5007_2
 |
 | This data is based on the votes that each party received
 | in the first tier, which provides the majority (79) seats in the
 | Legislative Yuan (from geographical constituencies, which employ
 | a first-past-the-post system).

F5007_3 >>> EFFECTIVE NUMBER OF PARLIAMENTARY PARTIES

The Effective Number of Parliamentary Parties (ENPP).

00.00-150.00 EFFECTIVE NUMBER OF PARLIAMENTARY PARTIES

997. PRESIDENTIAL ELECTION ONLY - NOT CALCULATED

999. MISSING

VARIABLE NOTES: F5007_3

Formula: $ENPP = 1 / (\sum S_i^2)$
 where S_i represents the seat share of party i , and all parties ($i=1,2,...n$) receiving votes are included in the calculation.

Definition based on Laakso, M. and R. Taagepera (1979).
 "'Effective" Number of Parties: A Measure with Application to West Europe', Comparative Political Studies 12: 3-27.

The electoral data employed to calculate F5007_3 comes from lower house elections, unless the study is focused on upper house elections exclusively, and is based on all seats in the parliament, unless otherwise stated.

The CSES Secretariat calculates these data for each polity's election and cross-checks it against the standard source of data, namely:
 Gallagher, Michael, 2025. "Election indices dataset" - see: https://www.tcd.ie/Political_Science/about/people/michael_gallagher/ElSystems/index.php,
 (Date accessed: November 26, 2025).

Data are unavailable for UNITED STATES (2024).

ELECTION STUDY NOTES - DENMARK (2022): F5007_3

This data is calculated by taking parties that competed in mainland Denmark only.

ELECTION STUDY NOTES - MONTENEGRO (2023): F5007_3

These entries report electoral lists participating in the election. Seven of the participating lists were based on electoral alliances consisting of multiple political parties.

ELECTION STUDY NOTES - NORTH MACEDONIA (2024): F5007_1-4

These data are based on using the results for electoral coalitions. Data at the level of individual parties are unavailable.

ELECTION STUDY NOTES - POLAND (2023): F5007_3

These entries are based on individual parties. Gallagher's result is smaller (3.13), because his calculations are based on electoral coalitions.

ELECTION STUDY NOTES - SLOVENIA (2022): F5007_1-4

| These data are based on using the results for electoral
| coalitions. Data at the level of individual parties are
| unavailable.

| ELECTION STUDY NOTES - TAIWAN (2024): F5007_3

| This data is based on the share of seats that each party
| received resulting from all tiers: the geographical
| constituencies (General; 79 seats), and the nationwide
| closed-list proportional tier (34 seats).

F5007_4 >>> CORRECTED EFFECTIVE NUMBER OF PARLIAMENTARY PARTIES

The Corrected Effective Number of Parliamentary Parties (CENPP).

00.00-150.00 CORRECTED EFFECTIVE NUMBER OF PARLIAMENTARY
PARTIES

997. PRESIDENTIAL ELECTION ONLY - NOT CALCULATED

999. MISSING

| VARIABLE NOTES: F5007_4

| Corrected Effective Number of Parliamentary Parties corrects for
| the "other" category using the least component method of bounds
| suggested by Taagepera (1997). The method requires calculating
| the ENPP (F5007_3) two times. One is treating the "other"
| category as a single party, and the second is calculating the
| ENPP as if every seat in the "other" category belonged to a
| different party. The CENPP is the mean of both measures.

| Definition based on: Taagepera, R. (1997). 'Effective Number of
| Parties for incomplete Data', Electoral Studies 16: 145-151.

| The electoral data employed to calculate F5007_4 comes from lower
| house elections, unless the study is focused on upper house
| elections exclusively, and is based on all seats in the
| parliament, unless otherwise stated.

| The CSES Secretariat calculates these data for each polity's
| election and cross-checks it against the standard source of data,
| namely:

| Gallagher, Michael, 2025. "Election indices dataset" - see:
| https://www.tcd.ie/Political_Science/about/people/michael_gallagher/ElSystems/index.php,
| (Date accessed: November 26, 2025).

| Data are unavailable for UNITED STATES (2024).

| ELECTION STUDY NOTES - DENMARK (2022): F5007_4
|
| This data is calculated by taking parties that competed in
| mainland Denmark only.

| ELECTION STUDY NOTES - MONTENEGRO (2023): F5007_4
|
| These data report electoral lists participating in the
| election. Seven of the participating lists were based on
| electoral alliances consisting of multiple political parties.

| ELECTION STUDY NOTES - NORTH MACEDONIA (2024): F5007_1-4
|
| These data are based on using the results for electoral
| coalitions. Data at the level of individual parties are
| unavailable.

|
| These data are based on using the results for electoral
| coalitions. Data at the level of individual parties are
| unavailable.

| ELECTION STUDY NOTES - TAIWAN (2024): F5007_4
|
| These data are based on the share of seats that each party
| received resulting from all tiers: the geographical
| constituencies (General; 79 seats), and the nationwide
| closed-list proportional tier (34 seats).

F5007_5 >>> LEAST SQUARE INDEX

Least Squares Index (LSq) of Proportionality of Election Result
.....

00.00-150.00	LEAST SQUARE INDEX (LSq)
997.	PRESIDENTIAL ELECTION ONLY - NOT CALCULATED
999.	MISSING

| VARIABLE NOTES: F5007_5
|
| F5007_5 details the Least Squares Index (LSq), which measures
| disproportionality between the vote distribution and the seat
| distribution in lower house elections, as suggested by Gallagher
| (1991).
|
| Definition based on: Gallagher, M. (1991). 'Proportionality,

| disproportionality, and electoral systems', Electoral Studies 10:
 | 33-51.
 |
 | The CSES Secretariat calculates these data for each polity's
 | election and cross-checks it against the standard source of data,
 | namely:
 | Gallagher, Michael, 2025. "Election indices dataset" - see:
 | https://www.tcd.ie/Political_Science/about/people/michael_gallagher/ElSystems/index.php,
 | (Date accessed: November 26, 2025).
 |
 | Data are unavailable for UNITED STATES (2024).

 F5008 >>> AGE OF FRANCHISE - AGE AT WHICH CITIZEN BECOMES ELIGIBLE
 TO VOTE

Age at which citizen becomes eligible to vote in National Elections
 for the Lower House

16-21.	AGE AT WHICH CITIZEN IS ELIGIBLE TO VOTE IN NATIONAL ELECTIONS FOR LOWER HOUSE
97.	OTHER
99.	MISSING

| VARIABLE NOTES: F5008
 |
 | F5008 details the voting eligibility age in each polity - i.e.,
 | the minimum age established by law whereby a citizen is eligible
 | to vote in national elections for the lower house.
 |
 | Source of data: IPU Parline: Global Data on National Parliaments.
 | Electoral Systems - Eligibility and Voting. Available at:
 | <https://data.ipu.org/data-explorer/> (Date accessed: June 07,
 | 2024).
 |
 | ELECTION STUDY NOTES - TAIWAN (2024): F5008
 |
 | The IPU Parline database does not contain data about Taiwan.
 | F5008 is classified based on the Taiwanese constitution that
 | came into effect on December 25, 1947, which grants universal
 | suffrage to all citizens aged 20 and above, regardless of sex.

 F5008_1 >>> ELECTORAL TURNOUT AS A PERCENTAGE OF REGISTERED VOTERS (ER)
 - LOWER HOUSE

Official Voter Turnout - Percentage of Registered Voters (ER) in
the Lower House election.

000.00-100.00 PERCENT OF REGISTERED VOTERS WHO VOTED IN LOWER
HOUSE ELECTION

997.00 NOT APPLICABLE: NO LOWER HOUSE ELECTION

999.00 MISSING

VARIABLE NOTES: F5008_1

F5008_1 details The Electoral Register (ER) turnout in the lower
house election, which is the total number of votes cast
(valid and invalid) divided by the number of names on the voters'
register, as an expressed percentage.

Turnout data refers to lower house elections unless otherwise
specified in the ELECTION STUDY NOTES below.

Turnout data primarily comes from the International Institute
for Democracy and Electoral Assistance (IDEA) Voter Turnout
Database: <https://www.idea.int/data-tools/data/voter-turnout-database> (Date accessed: November 26, 2025).

If the source deviates from the above, it is detailed in the
ELECTION STUDY NOTES.

Data are unavailable for UNITED STATES (2024).

ELECTION STUDY NOTES - DENMARK (2022): F5008_1

F5008_1 refers to turnout in Denmark including votes cast in the
the Faroe Islands and Greenland, two autonomous territories in
the Kingdom of Denmark. The official voter turnout for mainland
Denmark based on the percentage of registered voters was 84.2%.

ELECTION STUDY NOTES - TAIWAN (2024): F5008_1

F5008_1 refers to the turnout in the geographical
constituencies, which employ the first-past-the-post system.

F5008_2 >>> ELECTORAL TURNOUT AS A PERCENTAGE OF THE VOTING AGE
POPULATION (VAP) - LOWER HOUSE

Official voter turnout - Percentage of voting age population (VAP)
in the Lower House election.

000.00-100.00 PERCENT OF VOTING AGE POPULATION

997.00 NOT APPLICABLE: NO LOWER HOUSE ELECTION

999.00 MISSING

VARIABLE NOTES: F5008_2

F5008_2 details the Voting Age Population (VAP) in the lower house election, which includes all citizens above the legal voting age in a country. It is not intended to be a precise measure of the number of citizens entitled to vote as it does not take into account legal or systematic impediments such as resident non-citizens. Rather, its intent is to provide an estimate of turnout besides estimates based solely on an electoral register. Voter registers are often outdated or inaccurate or, in some circumstances, are not used for elections (e.g., 1994 South African elections).

In some polities, voters are registered automatically and hence it might be expected that the electoral register measure and the voting age population can be identical. This is not always the case for the reasons set out above. However, and unless we can verify the accuracy, CSES reports the Voting Age Population as listed by the IDEA. However, ELECTION STUDY NOTES below do alert users to instances where voter registration is automatic and thus to cases in which in theory the ER and VAP estimates could be identical.

Turnout data refers to lower house elections unless otherwise specified in the ELECTION STUDY NOTES below.

Turnout data primarily comes from the International Institute for Democracy and Electoral Assistance (IDEA) Voter Turnout Database: <https://www.idea.int/data-tools/data/voter-turnout-database> (Date accessed: November 26, 2025).

If the source deviates from the above, it is detailed in the ELECTION STUDY NOTES.

Data are unavailable for UNITED STATES (2024).

ELECTION STUDY NOTES - DENMARK (2022): F5008_2

F5008_2 refers to turnout in mainland Denmark, as voting age population data for Greenland and Faroe Islands region are unavailable.

F5008_3 >>> ELECTORAL TURNOUT AS A PERCENTAGE OF REGISTERED VOTERS (ER)
- PRESIDENT ROUND 1

Official Voter Turnout - Percentage of Registered Voters (ER) in
the Presidential election (Round 1).

000.00-100.00 PERCENT OF REGISTERED VOTERS WHO VOTED IN
PRESIDENTIAL ELECTION ROUND 1

996.00. NOT APPLICABLE: NO ROLE OF PRESIDENT

997.00. NOT APPLICABLE: NO PRESIDENTIAL ELECTION

999.00. MISSING

| VARIABLE NOTES: F5008_3

| F5008_3 details The Electoral Register (ER) turnout in the
| Presidential election, which is the total number of votes cast
| (valid and invalid) divided by the number of names on the voters'
| register, as an expressed percentage.

| Turnout data primarily comes from the International Institute

F5009_1 >>> VOTING OPERATIONS: EARLY/ADVANCE VOTING

M04c. Can voters cast a ballot before Election Day(s)? (i.e., Is
 early voting possible)?

-
- 0. NO
 - 1. YES, FOR THE WHOLE ELECTORATE
 - 2. YES, BUT ONLY FOR SOME OF THE ELECTORATE [SEE ELECTION
 STUDY NOTES FOR SPECIFICATION]
 - 9. MISSING

| VARIABLE NOTES: F5009_1

| F5009_1 details whether advance voting is possible for some or
 | the whole of the electorate.

| Source of data: CSES Macro Report Q4c.

| ELECTION STUDY NOTES - NORTH MACEDONIA (2024): F5009_1

| Advance voting is available to several categories of citizens:
 | - institutionalized persons
 | - elderly and frail persons
 | - internally displaced persons
 | - out-of-country voters (stipulated by legislation but not
 | implemented in practice for the 2024 elections due to low
 | out-of-country voter registration).
 | Note that early voting takes place one day before regular
 | election day.

| ELECTION STUDY NOTES - POLAND (2023): F5009_1

| Advance voting is available for people with disabilities and
 | elderly citizens.

| ELECTION STUDY NOTES - SLOVAKIA (2023): F5009_1

| Advance voting is available for citizens residing overseas.

| ELECTION STUDY NOTES - TURKIYE (2023): F5009_1

| Citizens living abroad can vote in embassies and consulates, and those who travel abroad could advance vote at airports.

| ELECTION STUDY NOTES - UNITED STATES (2024): F5009_1

| In 47 states and the District of Columbia, there were some forms of advance voting (mail-in; in-person) offered to voters, although in the state of Idaho, it varied by county. Only in the states of Alabama, New Hampshire, and Mississippi, there was no advance voting offered.

F5009_2 >>> VOTING OPERATIONS: VOTE BY MAIL/POSTAL

M04d. Can voters cast a ballot by mail?

.....

0. NO

1. YES, FOR THE WHOLE ELECTORATE

2. YES, BUT ONLY FOR SOME OF THE ELECTORATE [SEE ELECTION STUDY NOTES FOR SPECIFICATION]

9. MISSING

| VARIABLE NOTES: F5009_2

| F5009_2 details whether mail voting is possible for some or the whole of the electorate.

| Source of data: CSES Macro Report Q4d.

| ELECTION STUDY NOTES - MONTENEGRO (2023): F5009_2

| There is a procedure called "voting by mail", but in fact it means that a voter who is sick can ask that electoral commission representatives come to their home during election day and bring a "mobile" voting booth. There is no mailing involved.

| ELECTION STUDY NOTES - NEW ZEALAND (2023): F5009_2

| Mail voting is available for voters overseas on election day and for people who qualify for a "special vote". This "special vote" classification includes people who are enrolled late or are on an unpublished electoral roll, or otherwise unable to

| access a polling booth. Under certain conditions, voting by
 | mail is granted to voters in these categories.

| ELECTION STUDY NOTES - POLAND (2023): F5009_2

| Mail voting is available for citizens with disabilities and
 | elderly citizens.

| ELECTION STUDY NOTES - PORTUGAL (2022 & 2024): F5009_2

| Mail voting is available for citizens residing overseas.

| ELECTION STUDY NOTES - SLOVAKIA (2023): F5009_2

| Mail voting is available for citizens residing overseas.

| ELECTION STUDY NOTES - SLOVENIA (2022): F5009_2

| Mail voting is intended for voters who are in detention, a
 | prison, a hospital, or a social welfare institution for
 | institutional care, and for persons with recognized disability
 | status.

| ELECTION STUDY NOTES - SWEDEN (2022): F5009_2

| Mail voting is available for citizens residing overseas.

| ELECTION STUDY NOTES - UNITED STATES (2024): F5009_2

| While all 50 states and the District of Columbia allow some form
 | of voting by mail, the scope and conditions under which this is
 | permitted varies by state. Only a minority of states mail ballots
 | to all voters (DC, California, Colorado, Hawaii, Nevada, Oregon,
 | Utah, Vermont, and Washington) with registered voters
 | automatically sent a ballot. Some states like Florida and
 | Michigan offer no excuse mail voting where any registered voter
 | may request a mail-in ballot without providing a justification.
 | While other states like Texas, Kentucky, and Indiana require a
 | voter to provide an acceptable excuse (such as age, disability,
 | or absence).

 F5009_3 >>> VOTING OPERATIONS: VOTE ONLINE/INTERNET

M04e. Can voters cast a ballot online?

.....

- 0. NO
- 1. YES, FOR THE WHOLE ELECTORATE
- 2. YES, BUT ONLY FOR SOME OF THE ELECTORATE [SEE ELECTION
 STUDY NOTES FOR SPECIFICATION]

9. MISSING

| VARIABLE NOTES: F5009_3
 |
 | F5009_3 details whether online voting is possible for some or
 | the whole of the electorate.
 |
 | Source of data: CSES Macro Report Q4e.
 |
 | ELECTION STUDY NOTES - NEW ZEALAND (2023): F5009_3
 |
 | Online voting is available for citizens residing overseas.
 |
 | ELECTION STUDY NOTES - SWITZERLAND (2023): F5009_3
 |
 | Segments of the electorate in the cantons of Basel-City, St.
 | Gallen and Thurgau, as well as Swiss citizens abroad could vote
 | online.

 F5010_1 >>> ELECTORAL MANAGEMENT: ELECTORAL ADMINISTRATION MODEL

Electoral Administration Model.

.....
 0. INDEPENDENT BODY
 1. MIXED
 2. GOVERNMENT
 6. INFORMATION UNAVAILABLE
 9. MISSING

| VARIABLE NOTES: F5010_1
 |
 | F5010_1 details whether the administration of an election is
 | conducted by an independent body, a government body, or whether
 | it is a mixed/hybrid system.
 |
 | Source of data:
 | ACE Electoral Knowledge Network - see: <https://aceproject.org/epic-en/CDTable?view=country&question=EM012>

 | Source of data:
 | ACE Electoral Knowledge Network - see: <https://aceproject.org/epic-en/CDTable?view=country&question=VR008>
 | (Date accessed: December 01, 2025).

 F5011_1 >>> CONSTITUTIONAL FEDERAL STRUCTURE

Is the polity a Federation?

-
- 0. NO
 - 1. YES
 - 9. MISSING

| VARIABLE NOTES: F5011_1
 |
 | Federations are "compound polities, combining strong constituent
 | units and strong general government, each possessing powers
 | delegated to it by the people through a constitution and each
 | empowered to deal directly with the citizens in the exercise of
 | the legislative, administrative and taxing powers, and each
 | directly elected by the citizens." (Watts 2008, page 12).
 |
 | Source of data: Ronald L. Watts, (2008). "Comparing Federal
 | Systems". Institute of Intergovernmental Relations, Queen's
 | University, Kingston, Ontario, Canada.

 F5011_2 >>> NUMBER OF LEGISLATIVE CHAMBERS

The number of legislative chambers.

-
- 1. ONE LEGISLATIVE CHAMBER; UNICAMERAL LEGISLATURE
 - 2. TWO LEGISLATIVE CHAMBERS; BICAMERAL LEGISLATURE

9. MISSING

| VARIABLE NOTES: F5011_2
 |
 | F5011_2 details the number of legislative chambers in a polity.
 |
 | Source of data: CSES Macro Report and Publicly Available Sources.
 |
 | ELECTION STUDY NOTES - FRANCE (2022): F5011_2
 |
 | The French Parliament (Parlement Francais) is bicameral,
 | consisting of the Senate (Senat; the Upper House) and the
 | National Assembly (Assemblée nationale; the Lower House).
 | The Senate is indirectly elected by elected officials - it
 | represents territorial collectivities of the Republic and French
 | citizens living abroad.
 |
 | ELECTION STUDY NOTES - SLOVENIA (2022): F5011_2
 |
 | Slovenia is considered to be a case of incomplete bicameralism,
 | with the National Council, the second chamber, having mainly a
 | a consultative role. It is not directly elected, with its members
 | instead chosen indirectly by professional groups, employers,
 | and trade unions, with the goal to represent economic and social
 | interests. The National Council does have a suspensive veto where
 | it can delay legislation.

 F5011_3 >>> NUMBER OF DIRECTLY ELECTED LEGISLATIVE CHAMBERS

The number of directly elected legislative chambers.

.....

1. ONE LEGISLATIVE CHAMBER DIRECTLY ELECTED
2. TWO LEGISLATIVE CHAMBERS DIRECTLY ELECTED
9. MISSING

| VARIABLE NOTES: F5011_3
 |
 | F5011_3 details the number of legislative chambers in a polity
 | directly elected by voters in an election. Legislative chambers
 |
 | indirectly elected (e.g., by appointment or elected by states)
 | are not classified in this metric.
 |
 | Source of data: CSES Macro Report and Publicly Available Sources.

F5011_4 >>> SIZE OF THE LOWER HOUSE

Total number of seats in the lower house of the legislature during the election year.

001-900. SEATS IN THE LOWER HOUSE

999. MISSING.

| VARIABLE NOTES: F5011_4

| Source of data: CSES Macro Report and Publicly Available Sources.

| ELECTION STUDY NOTES - DENMARK (2022): F5011_4

| The Danish Folketing has 179 members, 175 of which are elected in mainland Denmark and the remaining four from the territories of Greenland and the Faroe Islands (two seats each).

| ELECTION STUDY NOTES - NEW ZEALAND (2023): F5011_4

| Under New Zealand's Mixed-Member Proportional (MMP) system, the New Zealand Parliament conventionally has 120 members. However, this can increase when a party/coalition wins more electorate seats (tier 1) than it would be entitled to based on its share of the nationwide party vote (tier 2). Overhang seats are a means of correcting this anomaly. An overhang seat occurs when a party's candidates win a constituency seat even though the party as a whole did not win enough votes nationally to justify that many seats overall.

| In the 2023 general election, Maori (MP, PARTY F) won six electorate seats (tier 1) but received only about 3.1% of the national vote, which would conventionally have entitled the party to four seats. Consequently, there were three overhang seats in the 2023 election, meaning the parliament size rose to 123.

| ELECTION STUDY NOTES - SLOVENIA (2022): F5011_4

| There are 90 members of the National Assembly of Slovenia, elected by two methods. Most of them (88) are elected by party-list proportional representation in eight 11-seat constituencies. Two additional deputies are elected by the Italian and Hungarian minorities via the Borda count.

F5012_1 >>> PRESIDENTIAL ELECTIONS ELECTORAL FORMULA

The electoral formula used to elect the President that is elected by popular vote.

 7. NOT APPLICABLE
 8. MISSING
 9. MISSING

VARIABLE NOTES: F5012_1

F5012_1 details the electoral formula used to elect the President when the President is elected by popular vote. Presidents indirectly elected (for example, those elected by Parliament) are classified as "7. NOT APPLICABLE".

Below, the classifications of each electoral formula are summarized:

- PLURALITY: The candidate that obtains the most votes wins.
- ABSOLUTE MAJORITY RULE: A candidate must win over 50% of the vote to win. If no candidate wins this many votes in Round 1, then there is a runoff election (Round 2), conventionally between the top two candidates.
- QUALIFIED MAJORITY RULE: Each qualified majority system specifies a particular percentage of the vote a candidate must win in order to be elected in Round 1. If two or more candidates overcome these thresholds, then the one with the highest number of votes wins. The qualified majority systems vary regarding the electoral procedure that applies when these thresholds are not met.
- ELECTORAL COLLEGE: The candidate that wins a plurality of the electoral college votes wins.
- SINGLE TRANSFERABLE VOTE: Requires voters to rank single candidates in order of the most to least preferred. Votes are transferred until candidates obtain the Droop quota. The candidate that obtains this quota first is elected. In essence, this is the Alternative Vote as only one candidate is elected.

The definition of F5012_1 is taken from Nils-Christian Bormann & Matt Golder's database about "Democratic Electoral Systems Around the World, 1946-2020" (Version 4.1). Featured in Electoral Studies 78.

Source of data:

<http://mattgolder.com/elections>. (Date accessed: May 14, 2024).

ELECTION STUDY NOTES - NORTH MACEDONIA (2024): F5012_1

The President of North Macedonia is elected using a modified

| two-round system. A candidate can win in the first round if they
 | receive over 50% of the vote from all registered voters. In the
 | second round, voter turnout must be at least 40% for the result
 | to be declared valid.

 F5012_2 >>> ELECTORAL FORMULA IN ALL ELECTORAL SEGMENTS (TIERS)

Whether the country uses a majoritarian formula, a proportional
 formula, or a mixed formula in all of its electoral segments/tiers.

.....

- 0. MAJORITARIAN
- 1. MIXED
- 2. PROPORTIONAL

- 9. MISSING

| VARIABLE NOTES: F5012_2

| The definition of F5012_2 is taken from Nils-Christian
 | Bormann & Matt Golder's database about "Democratic Electoral
 | Systems Around the World, 1946-2020" (Version 4.1). Featured in
 | Electoral Studies 78.

| Source of data:
 | <http://mattgolder.com/elections>. (Date accessed: May 14, 2024).

| MAJORITARIAN systems require successful candidates to win either
 | a plurality or majority of the vote. As a result, they are
 | considered majoritarian.

| MIXED systems use a mixture of majoritarian and proportional
 | electoral rules. A country can be classified as having a mixed
 | system whether it uses one or more electoral segments (tiers); in
 | practice, most mixed systems have more than one segment (tier).
 | Mixed electoral systems can be divided into those in which the
 | two electoral formulas are dependent and those in which they are
 | independent.

| PROPORTIONAL systems can be divided into two types: those that
 | use party lists and those like the single transferable vote that
 | do not. Those systems employing lists can themselves be divided
 | into two further categories: quota systems (with allocation of
 | remainders) and highest average systems.

 F5013_1 >>> AGE OF THE CURRENT REGIME

The number of years since the most recent regime change.

.....

001-500. AGE OF THE REGIME (YEARS)

999. MISSING

| VARIABLE NOTES: F5013_1

| F5013_1 details the number of years since the most recent regime change. It is taken from the POLITY IV project and is based on the "DURABLE" variable. Change in regime is defined by POLITY IV as a three-point change in the POLITY score over a period of three years or less or the end of transition periods defined by the lack of stable political institutions, as denoted by a standardized AUTHORITY score.

| Source of data: POLITY IV Project:
| Political Regime Characteristics and Transitions, 1800-2017,
| Monty G. Marshall and Keith Jagers, George Mason University and
| Colorado State University
| (<http://www.systemicpeace.org/polity/polity4.htm>)
| (Date accessed: July 14, 2021).

| The Polity IV annual time-series dataset
| (www.systemicpeace.org/inscr/p4v2017.xls)
| (Date accessed: July 14, 2021).

| Data are unavailable for TURKIYE (2023).

F5013_2 >>> REGIME: TYPE OF EXECUTIVE

Classification of political regimes.

.....

0. PARLIAMENTARY REGIME

1. MIXED REGIME

2. PRESIDENTIAL REGIME

9. MISSING

| VARIABLE NOTES: F5013_2

|

In CSES MODULE 6, classifications of political regimes mainly rely on the following decision rule as presented by Cheibub, 2007:

- A. The system is parliamentary either (i) if there is no independently (indirectly or directly) elected President or (ii) if there is an independently (indirectly or directly) elected President but the government is not responsible to the President.
- B. The system is mixed either if there is an independently (indirectly or directly) elected President and government is responsible to the President.
- C. The system is Presidential if the government is not responsible to the elected legislature.

NOTE: Responsibility refers to whether the survival of the executive depends directly on legislature (i.e., vote of confidence).

However, researchers are advised that in a small number of cases, coding employed in CSES MODULE 6 may diverge from regime classifications as suggested by Cheibub. Further, all polities included in CSES MODULE 6 are classified according to the above coding scheme, irrespective of their democratic status. Researchers interested in democracy ratings may refer to F5070_ (Freedom House) or F5071_ (Polity IV).

Source of data: Publicly Available Sources and Cheibub, Jose Antonio. 2007. "Presidentialism, Parliamentarism, and Democracy". New York. Cambridge University Press.

ELECTION STUDY NOTES - AUSTRIA (2024): F5013_2

Austria is classified as a mixed regime because its directly elected President holds significant constitutional powers, even if rarely exercised, including the authority to dissolve parliament, command the armed forces, and dismiss the Chancellor or Federal Cabinet Ministers. While Austria's Presidents have conventionally exercised restraint in their use of these powers, the powers available to them make the role of President more powerful than in many other parliamentary systems where there is a directly elected head of state.

Article 29.1 of the Austrian Constitution states:
 "The Federal President can dissolve the National Council, but he may avail himself of this prerogative only once for the same reason."

In practice, the system works similarly to a parliamentary system.

ELECTION STUDY NOTES - PORTUGAL (2022 & 2024): F5013_2

Portugal is classified as a mixed regime as Portugal's President is directly elected and the government is accountable to both Parliament and the President (Article 190 of the Constitution).

F5014 >>> FUSED VOTE

Whether or not a fused vote was used for Presidential and legislative elections.

- 0. NO
- 1. YES
- 7. NOT APPLICABLE
- 9. MISSING

| VARIABLE NOTES: F5014

| Definition: A fused vote is when a citizen casts a single ballot for the elections of more than one political office.
 | F5014 classifies when the single ballot is for the Presidency and the legislature. Citizens are unable to divide their votes among the candidates or lists of different parties. Split-ticket voting is expressly prohibited.

SEASON

0. ELECTION HELD IN SPRING
 1. ELECTION HELD IN SUMMER
 2. ELECTION HELD IN FALL
 3. ELECTION HELD IN WINTER
 99. MISSING

| VARIABLE NOTES: F5015_ & F5016_

| Source of data: CSES Macro Report M8d-e.

| If the election involved multiple rounds, dates reported in
 | F5015_ and F5016_ refer to the first round, unless stated
 | otherwise in the ELECTION STUDY NOTES below.

| Elections held Monday-Friday inclusive are classified as weekday
 | elections. Elections held Saturday-Sunday are classified as
 | weekend elections. However, researchers are advised that while
 | this conceptualization of workweek and weekend applies to most
 | of the world, there are some notable exceptions with Sunday-
 | Thursday workweeks (e.g., Israel due to the Shabbat and some

Muslim-majority countries due to Friday prayers).

Seasonal designations for elections in the Northern Hemisphere are classified as follows:

- Spring: March, April, May
- Summer: June, July, August
- Fall: September, October, November
- Winter: December, January, February

Seasonal designations for elections in the Southern Hemisphere are classified as follows:

- Fall: March, April, May
- Winter: June, July, August
- Spring: September, October, November
- Summer: December, January, February

Furthermore, data refer to the main election, unless otherwise stated.

CSES classifies the main election based on the regime (executive) type and the election in which the CSES survey has been administered. For polities rated as parliamentary systems, CSES classifies the main election as elections to the lower house for most studies. It deviates for a few cases when elections to the upper house constitutes the main election, usually due to the respective CSES study focusing on the upper house contest. For polities rated as Presidential systems, CSES conventionally classifies the main election as the Presidential election. It sometimes deviates when data for the Presidential election is unavailable (e.g., when the CSES survey was administered in a midterm election). For polities rated as mixed systems, CSES has tended to classify the main election as elections to the lower house. However, it sometimes deviates depending on data availability. Users are advised to consult the table listed in VARIABLE NOTES for F3010_ME specifying the main election for each study in CSES for specific details.

ELECTION STUDY NOTES - BRAZIL (2022): F5016_S

As the majority of the country is located in the Southern Hemisphere, Brazil is classified as such for the seasonal calculation.

ELECTION STUDY NOTES - DENMARK (2022): F5016_M & F5016_D

Elections in the Faroe Islands were held on October 31, 2022, as November 1 is a day of mourning for victims at sea.

ELECTION STUDY NOTES - NORTH MACEDONIA (2024): F5015_ & F5016_

The first round of the Presidential elections was scheduled and held on April 24, 2024. The parliamentary elections and the second round Presidential elections were scheduled and held on May 8, 2024.

| ELECTION STUDY NOTES - PORTUGAL (2022): F5015_

| The election was originally supposed to be held in October 2023, i.e., four years after the previous election (held on October 6, 2019). However, an early election was held due to budgetary crisis in the autumn of 2021.

| ELECTION STUDY NOTES - PORTUGAL (2024): F5015_

| The election was originally supposed to be held in January 2026, i.e., four years after the previous election (held on January 30, 2022). However, an early election was held after Prime Minister Antonio Costa's (PS) resignation following an investigation around alleged corruption involving the award of contracts for lithium and hydrogen businesses.

| ELECTION STUDY NOTES - SLOVENIA (2022): F5016_

| The Parliamentary elections were held on April 24, 2022, as classified in F5016_.
 | Later the same year, on October 23 and November 13, 2022, the two rounds of the Presidential elections were held.

 F5017 >>> ELECTION DATE IRREGULARITIES

M08e. If the election was held on a different date than scheduled, please explain why?

-
- 0. ELECTION WAS HELD ON THE SAME DAY AS SCHEDULED
 - 1. ELECTION WAS NOT HELD ON THE SAME DAY AS SCHEDULED [SEE ELECTION STUDY NOTES]
 - 9. MISSING

| VARIABLE NOTES: F5017

| F5017 details whether or not the election was held on a different date than scheduled, i.e., whether any election date irregularities occurred.

| In instances where elections were held on a different day than scheduled, ELECTION STUDY NOTES below provide further details.

| Source of data: CSES Macro Report M8e.

| ELECTION STUDY NOTES - PORTUGAL (2022): F5017

| The election was originally supposed to be held in October 2023, i.e., four years after the previous election (held on October 6,

| 2019). However, an early election was held due to budgetary
 | crisis in the autumn of 2021.

| ELECTION STUDY NOTES - PORTUGAL (2024): F5017

| The election was originally supposed to be held in January 2024,
 | i.e., four years after the previous election (held on January 30,
 | 2022). However, an early election was held after Prime Minister
 | Antonio Costa's (PS) resignation following an investigation
 | around alleged corruption.

| ELECTION STUDY NOTES - SLOVAKIA (2023): F5017

| The OL'ANO (PARTY D) led coalition government of Eduard Heger
 | collapsed after losing a no-confidence vote in parliament on
 | December 15, 2022, which followed the departure of the Freedom
 | and Solidarity (SaS, PARTY F) from the coalition in September
 | 2022 due to disagreements over economic policy.
 | A referendum in January 2023 was held asking citizens to amend
 | the Slovak Constitution permitting early elections. While there
 | was strong support for the amendment in the referendum, only 27%
 | of eligible citizens voted, well below the minimum 50% turnout
 | threshold, meaning the proposal was not adopted.
 | On January 25, 2023, four days after the failed plebiscite, the
 | Slovak parliament passed a constitutional amendment permitting
 | early elections if approved by three fifths of the Slovak
 | parliament (i.e., 90 votes). In a vote in parliament the same
 | day, 92 Slovak MPs voted for parliament to be dissolved and
 | early elections to be held in September 2023. Initially, Eduard
 | Heger continued as caretaker Prime Minister. However, in May
 | 2023, with the resignation of the Foreign and Agriculture
 | Ministers, President Caputova declared that the government had
 | lost its credibility and formally accepted Heger's resignation
 | on May 7, 2023, and appointed an interim technocratic government
 | led by economist Ludovit Odor, deputy governor of the Slovak
 | National Bank until the elections on September 30, 2023.

| ELECTION STUDY NOTES - TURKIYE (2023): F5017

| The election was held approximately one month earlier. According
 | to the Macro report, "University entrance examination was
 | scheduled for the 18th of June. Additionally, if there were
 | to be a second round of the Presidential election, then two
 | weeks following the original date was also a religious holiday.
 | Hence, the election date was moved to May 14, which also
 | symbolically coincided with the first competitive elections
 | in TURKIYE back in 1950."

 F5018_1 >>> NUMBER OF MONTHS SINCE LAST LOWER HOUSE ELECTION

The number of months between the current and previous

lower house election.

.....

1-200. NUMBER OF MONTHS SINCE LAST LOWER HOUSE ELECTION

999. MISSING

| VARIABLE NOTES: F5018_1

| F5018_1 details the number of months since the current and
 | previous lower house election.
 | If the previous national lower chamber election was held in more
 | than one round (i.e., run-off election), the data refer to the
 | number of months since the first round.

| Further details on election date irregularities (i.e., elections
 | held on a different date than scheduled) are provided in ELECTION
 | STUDY NOTES for variable F5017.

| Source of data: Publicly Available Sources.

 F5018_2 >>> NUMBER OF MONTHS SINCE LAST PRESIDENTIAL ELECTION

The number of months between the current and previous
 Presidential election.

.....

1-200. NUMBER OF MONTHS SINCE LAST PRESIDENTIAL ELECTION

997. NOT APPLICABLE

999. MISSING

| VARIABLE NOTES: F5018_2

+++ TABLE: NAME OF PRESIDENT BEFORE ELECTION BY POLITY

POLITY (ELEC YEAR)	Name of President Before Election
-----	-----
AUSTRIA (2024)	Alexander Van der Bellen
BRAZIL (2022)	Jair Bolsonaro
FRANCE (2022)	Emmanuel Macron
MONTENEGRO (2023)	Milo Djukanovic
NORTH MACEDONIA (2024)	Stevo Pendarovski
POLAND (2023)	Andrzej Duda
PORTUGAL (2022)	Marcelo Rebelo de Sousa
PORTUGAL (2024)	Marcelo Rebelo de Sousa
SLOVAKIA (2023)	Zuzana Caputova
SLOVENIA (2022)	Borut Pahor
TAIWAN (2024)	Tsai Ing-wen
TURKIYE (2023)	Recep Tayyip Erdogan
UNITED STATES (2024)	Joseph Biden
-----	-----

| ELECTION STUDY NOTES - BRAZIL (2022): F5019_1
|
| The outgoing President Jair Bolsonaro was elected by the Partido
| Social Liberal - PSL (Liberal Social Party). However, he switched
| to Partido Liberal - PL (Liberal Party; Party B) during his
| mandate and ran for this party (PL) in 2022.

| ELECTION STUDY NOTES - FRANCE (2022): F5019_1

| Before the current election (and after), the French President was Emmanuel Macron of La Republique en Marche (The Republic Onwards, LREM, Party A). The party was re-branded as Renaissance (Revival) in 2022.

| ELECTION STUDY NOTES - MONTENEGRO (2023): F5019_1

| Before the Presidential election in March 2023, the incumbent President was Milo Djukanovic of DPS (here, numerically coded 499002). However, before and after the parliamentary elections of June 2023, the incumbent President was the same both before and after the election - Jakov Milatovic of Movement Europe Now! (Party A).

| ELECTION STUDY NOTES - SLOVENIA (2022): F5019_1

| Data in F5019_ classify the Presidency before and after the 2022 Slovenian parliamentary elections, respectively, as the Slovenian (2022) study focuses on the legislative contest. Before and after the April 2022 legislative elections, the Presidency was held by Borut Pahor (Social Democrats, PARTY D, NUMERICAL CODE 705004). However, researchers are advised that Presidential elections were held later the same year, on October 23 and November 13, 2022, respectively. In the 2022 Presidential contest, Pahor contested as an independent candidate.

| ELECTION STUDY NOTES - SWITZERLAND (2023): F5019_1

| Switzerland's executive is a collective and operates on the basis of a consociational system. The Federal Council, equivalent of the Swiss cabinet, is composed of seven members, and functions jointly as both head of government and head of state. All decisions are made collegially, meaning the Council governs by consensus and collective responsibility rather than through a hierarchical leader.

| The President of the Council is elected from among the councillors for a one-year term, but this role is purely ceremonial and coordinating. The President chairs meetings and represents Switzerland abroad but has no additional authority over the other councillors.

| In case of a caretaker government, e.g., after a collapse of the
| government, the party affiliations of its (remaining) members
| are used to code the outgoing government variables.

| Parties/coalitions and their numerical and alphabetical
| classifications for each election study are detailed in Part 3
| of the CSES Codebook.

| Source of data: CSES Macro Report M2b.

| +++ TABLE: NAME OF PRIME MINISTER BEFORE ELECTION BY POLITY

| POLITY (ELEC YEAR) Name of Prime Minister Before Election

AUSTRALIA (2022)	Scott Morrisson
AUSTRIA (2024)	Karl Nehammer
DENMARK (2022)	Mette Frederiksen
FRANCE (2022)	Jean Castex
MONTENEGRO (2023)	Dritan Abazovic
NEW ZEALAND (2023)	Chris Hipkins
NORTH MACEDONIA (2024)	Dimitar Kovacevski
POLAND (2023)	Mateusz Morawiecki
PORTUGAL (2022)	Antonio Luis Santos da Costa
PORTUGAL (2024)	Antonio Luis Santos da Costa
SLOVAKIA (2023)	Ludovit Odor
SLOVENIA (2022)	Janez Jansa
SWEDEN (2022)	Magdalena Andersson
TAIWAN (2024)	Chen Chien-jen

| ELECTION STUDY NOTES - NORTH MACEDONIA (2024): F5020_1

| Before the current parliamentary election, the Prime Minister of North Macedonia was Dimitar Kovacevski of the Social Democratic Union of Macedonia (SDSM, PARTY B).

| Talat Xhaferi of the Democratic Union for Integration (DUI; PARTY C, numerical code 807003) was President of the technical government, from January 28 to June 23, 2024. It was a transitional government agreeing to lead the country in the 100 days before the parliamentary elections scheduled for May 8, 2024.

| ELECTION STUDY NOTES - SLOVAKIA (2023): F5020_1

| Following the collapse of the OĽaNO (PARTY D) led coalition government under Prime Minister Eduard Heger, which lost a vote of no confidence on December 15, 2022, after the departure of the Freedom and Solidarity (SaS, PARTY F) from the coalition in September 2022, the Heger-led government continued in a caretaker capacity until May 2023. However, after further ministerial resignations in May 2023, the Heger government resigned on May 7, 2023. An interim technocratic government was appointed by President Caputova, led by economist Ludovit Odor, deputy governor of the Slovak National Bank, until the elections of September 30, 2023. The data classification reflects the technocratic caretaker government headed by Ludovit Odor.

| ELECTION STUDY NOTES - SWITZERLAND (2023): F5020_1

| Switzerland has no formal role of Prime Minister because its executive is a collective and operates on the basis of a consociational system. The Federal Council, equivalent of the Swiss cabinet, is composed of seven members, and functions jointly as both head of government and head of state. All decisions are made collegially, meaning the Council governs by consensus and collective responsibility.

| The President of the Council is elected from among the councillors for a one-year term, but this role is purely ceremonial and coordinating. The President chairs meetings and represents Switzerland abroad but has no additional authority over the other councillors.

VARIABLE NOTES: F5020_2

F5020_2 details the party holding the role of Prime Minister after the election, regardless of whether there was a parliamentary election or not.

Parties/coalitions and their numerical and alphabetical classifications for each election study are detailed in Part 3 of the CSES Codebook.

In case of a caretaker government, e.g., after a collapse of the government, the party affiliations of its (remaining) members are used to code the incoming government variables.

Source of data: CSES Macro Report M3b.

+++ TABLE: NAME OF PRIME MINISTER AFTER ELECTION BY POLITY

POLITY (ELEC YEAR)	Name of Prime Minister After Election
AUSTRALIA (2022)	Anthony Albanese
AUSTRIA (2024)	Christian Stocker
DENMARK (2022)	Mette Frederiksen
FRANCE (2022)	Elisabeth Borne*
MONTENEGRO (2023)	Milojko Spajic
NEW ZEALAND (2023)	Christopher Luxon
NORTH MACEDONIA (2024)	Hristijan Mickoski
POLAND (2023)	Donald Tusk
PORTUGAL (2022)	Antonio Luis Santos da Costa
PORTUGAL (2024)	Luis Montenegro
SLOVAKIA (2023)	Robert Fico
SLOVENIA (2022)	Robert Golob
SWEDEN (2022)	Ulf Kristersson
TAIWAN (2024)	Cho Jung-tai

KEY: * = see ELECTION STUDY NOTES below.

ELECTION STUDY NOTES - FRANCE (2022): F5020_2

Since 2002, French legislative elections have been held shortly after the Presidential elections, thereby decreasing the chances of a divided government where the President has a different party affiliation than the parliamentary majority (referred to as cohabitation).

At the French 2022 Presidential elections in April, incumbent Prime Minister was Jean Castex. However, Castex resigned in May ahead of the June 2022 legislative elections. Castex' successor

| is Elisabeth Borne, classified here as Prime Minister after the
 | election. Both Castex and Borne are affiliated with La Republique
 | En Marche (LREM, PARTY A, NUMERICAL CODE 276001).

| ELECTION STUDY NOTES - SWITZERLAND (2023): F5020_1

| Switzerland has no formal role of Prime Minister because its
 | executive is a collective and operates on the basis of a
 | consociational system. The Federal Council, equivalent of
 | the Swiss cabinet, is composed of seven members, and functions
 | jointly as both head of government and head of state. All
 | decisions are made collegially, meaning the Council governs
 | by consensus and collective responsibility.
 | The President of the Council is elected from among the
 | councillors for a one-year term, but this role is purely
 | ceremonial and coordinating. The President chairs meetings and
 | represents Switzerland abroad but has no additional authority
 | over the other councillors.

 F5020_C >>> PARTY OF THE PRIME MINISTER CHANGED

Did the Party of the Prime Minister change due to the elections?

- 0. NO: PARTY OF PRIME MINISTER DID NOT CHANGE
- 1. YES: PARTY OF PRIME MINISTER DID CHANGE
- 7. NOT APPLICABLE: NO ROLE OF PRIME MINISTER
- 9. MISSING

| VARIABLE NOTES: F5020_C

| F5020_C classifies whether the party of the Prime Minister
 | changed by the election. The variable is codified based on the
 | party affiliation of the Prime Minister, not the individual
 | politician.

| Source of data: CSES Macro Report M2b & M3b.

 F5021_1 >>> GOVERNMENT BEFORE: SINGLE PARTY OR COALITION GOVERNMENT

Was the government before the election a single party, or coalition
 government, or an institutionalized coalition government?

- | | |
|----|--|
| 0. | SINGLE PARTY GOVERNMENT |
| 1. | COALITION GOVERNMENT |
| 2. | INSTITUTIONALIZED COALITION GOVERNMENT |
| 9. | MISSING |

| VARIABLE NOTES: F5021_1

| F5021_1 classifies whether the outgoing government was a single
 | party government or a coalition government. A coalition
 | government is classified as a government including cabinet
 | ministers of more than one party.
 | SINGLE PARTY GOVERNMENT: A government in which one political
 | party holds all executive power.
 | COALITION GOVERNMENT: A government formed voluntarily by two
 | or more political parties that share executive power. Parties
 | in the coalition agree on a common policy program and a division
 | of ministerial portfolios. Their composition depends on
 | parliamentary arithmetic.
 | INSTITUTIONALIZED COALITION: An government where multi-party
 | powersharing is mandated by constitutional rules or convention.
 | While the precise composition of the government depends on
 | parliamentary arithmetic, the same parties or groups are
 | guaranteed representation in the executive regardless of
 | the election.
 | Minority governments relying on confidence and supply
 | arrangements with other actors in parliament are not classified
 | as coalition governments unless actors from multiple parties sit
 | and have a vote in cabinet.
 | The measure does not specify whether the government commands a
 | a majority of seats in parliament.
 |
 | In case of a caretaker government, e.g., after a collapse of the
 | government, the party affiliations of its (remaining) members
 | are used to code the outgoing government variables.
 |
 | Source of data: Publicly available sources & CSES Macro
 | Report M2c.

 F5021_2 >>> SIZE OF THE CABINET BEFORE ELECTION

M02d. The size of the cabinet before the election.

00.00-99.00 SIZE OF THE CABINET

999.00 MISSING

VARIABLE NOTES: F5021_2

F5021_2 details the total cabinet size before the election, based on the following definition adopted by CSES:

- a) Parliamentary and Semi-Presidential Regimes:
 Cabinet size is defined by the total number of ministers (persons, not posts) in a defined government. Ministers are considered members of a cabinet when they exercise voting rights. This number includes both ministers with and without portfolio and the Prime Minister, but excludes deputy ministers, undersecretaries, parliamentary secretaries, ministerial alternates, given that in the majority of cases, they do not exercise full voting rights.
- b) Presidential Regimes:
 Cabinet size is defined by the total number of people holding ministries or secretaries who head a ministry.

In case of a caretaker government, e.g., after a collapse of the government, the number of its (remaining) members are used to code the outgoing cabinet size.

Source of data: CSES Macro Report M2d.

ELECTION STUDY NOTES - FRANCE (2022): F5021_2

In France, only full ministers and the Prime Minister are members of the Conseil des ministres, the French constitutional cabinet. It is only these ministers who have the right to attend cabinet and the symbolic right to vote at cabinet. Yet, as France's junior ministers are politically appointed, exercise executive authority, and many regularly attend and participate in cabinet, and thus are seen as part of the government's leadership, even if not formally included in the Conseil des ministres. F5021_2 classifies the complete French cabinet and includes junior ministers (Ministres delegues) and Secretaries of State (Secrétaires d'Etat).

Following the CSES Macro Report and Bendjaballah and Sauger (2023), F5021_ variables classify the French cabinet as of January 1, 2022, with a cabinet size of 41. However, researchers are advised that there was a minor cabinet reshaping in March 2022, resulting in two ministers stepping down, with only one of them being replaced. Hence, the size of the cabinet decreased from 41 to 40 in March, until its dissolution on May 16, 2022.

ELECTION STUDY NOTES - MONTENEGRO (2023): F5021_2

The size of the cabinet was 18 seats in total. Initially, there were three more ministers, one from URA (Party I) who resigned and two from the Social Democratic Party of Montenegro (SDP) who were dismissed. F5021_2 classifies a cabinet size of 18.

ELECTION STUDY NOTES - PORTUGAL (2024): F5021_2

| Initially, the size of the cabinet was 18 seats in total.
 | However, on 3 January 2023, the Ministry of Infrastructure
 | and Housing was split into the Ministry of Infrastructure and
 | the Ministry of Housing, increasing the number of ministries
 | (including the Prime Minister) to 19.

| ELECTION STUDY NOTES - SLOVENIA (2022): F5021_2

| Before the election, there were 15 ministers who held defined
 | portfolios including the outgoing Prime Minister, and three
 | cabinet ministers who had no designated portfolios but sat at
 | cabinet, bringing the total cabinet size to 18.

```

 election?

```
.....
00.00-100.00 NUMBER/PERCENTAGE OF CABINET POSTS BEFORE ELECTION
              HELD BY ACTOR

999.00      MISSING
```

| VARIABLE NOTES: F5021_A-I, F5021_W_, & F5021_NP

| Parties/coalitions and their numerical and alphabetical
 | classifications for each election study are detailed in Part 3 of
 | the CSES Codebook.

| Ministers are considered those members of government who are
 | members of the Cabinet and who have Cabinet voting rights. This
 | includes the Prime Minister. In case of a caretaker government,
 | e.g., after a collapse of the government, the party affiliations
 | of its (remaining) members are used to code the outgoing

government variables.

Cabinet members listed in F5021_ represent parties/coalitions receiving an alphabetical classification by CSES or Independents. Cabinet members who represent parties/coalitions not receiving such a classification are classified by variable F5021_2, which classifies the total size of the cabinet before the election. Users are advised to consult the ELECTION STUDY NOTES of variable F5021_2.

F5021_W1, F5021_W2, and F5021_NP record the number and percentage of cabinet ministers belonging to particular categories (e.g., women, independents) before the election. These classifications are principally based on a count of individuals serving at cabinet, rather than a count of the portfolios they hold. In many instances, cabinet membership and the number of portfolios coincide, but this is not universally the case.

In most instances in CSES, cabinet size is defined as the number of persons formally appointed as cabinet-level ministers. However, cross-national practice varies, and in some cases ministers may hold multiple portfolios simultaneously. As a result, the number of cabinet members may not always be equivalent to the number of portfolios. While CSES aims for consistency in counting individuals who constitute the cabinet, there may be some inconsistencies in classifications, reflecting differences in institutional arrangements, local interpretations, and data availability.

Source of data: Publicly available sources & CSES Macro Report M2c & M2g.

Data are unavailable for F5021_NP for TAIWAN (2024).

ELECTION STUDY NOTES - AUSTRALIA (2022): F5021_W1

The female members of the cabinet and the portfolios they held are (listed in alphabetical order of surname, except for Prime Minister, if applicable):

Andrews (Home Affairs).
 Cash (Attorney General & Industrial Relations).
 Ley (Environment).
 McKenzie (Emergency Management & Regionalization).
 Payne (Foreign Affairs).
 Price (Defense Industry).
 Reynolds (National Disability Insurance & Government Services).
 Ruston (Family & Social Services).

ELECTION STUDY NOTES - AUSTRIA (2024): F5021_W1

The female members of the cabinet and the portfolios they held are (listed in alphabetical order of surname, except for Prime Minister, if applicable):

|
 | Edtstadler (EU and Constitution).
 | Gewessler (Climate Action, Environment, & Energy).
 | Raab (Women, Family, Integration and the Media).
 | Tanner (Defense).
 | Zadic (Justice).

| ELECTION STUDY NOTES - BRAZIL (2022): F5021_A - F5021_I

|
 | Additional cabinet posts were held by the Republicanos (two
 | posts), PSD (one post), and four posts held by members of the
 | Military.

| ELECTION STUDY NOTES - BRAZIL (2022): F5021_W1

|
 | The female members of the cabinet and the portfolios they held
 | are (listed in alphabetical order of surname, except for
 | Prime Minister if applicable):

|
 | Britto (Woman, Family, & Human Rights).

| ELECTION STUDY NOTES - DENMARK (2022): F5021_W1

|
 | The female members of the cabinet and the portfolios they held
 | are (listed in alphabetical order of surname, except for
 | Prime Minister, if applicable):

|
 | Frederiksen (Prime Minister).
 | Bramsen (Transport & Equality).
 | Krag (Social & Elderly Affairs).
 | Mogensen (Culture).
 | Rosenkrantz Theil (Children & Education).
 | Wermelin (Environment).

| ELECTION STUDY NOTES - FRANCE (2022): F5021_A - F5021_I

|
 | The remaining cabinet posts were held by:
 | - Territories of Progress (TDP)- eleven posts
 | - Democratic Movement (MoDem) - five posts
 | - In Common (En commun) - one post
 | - Radical Movement (Parti Radical) - one post
 | - Act (Agir) - one post.

| ELECTION STUDY NOTES - FRANCE (2022): F5021_W1 & F5021_W2

|
 | In France, only full ministers and the Prime Minister are members
 | of the Conseil des ministres, the French constitutional cabinet.
 | It is only these ministers who have the right to attend cabinet
 | and the symbolic right to vote at cabinet. Yet, as France's
 | junior ministers are politically appointed, exercise executive
 | authority, and many regularly attend and participate in cabinet,
 | and thus are seen as part of the government's leadership, even
 | if not formally included in the Conseil des ministres. F5021_W1
 | classifies the complete French cabinet and includes female

| ministers who sit at cabinet as junior ministers (Ministres
 | delegates) and Secretaries of State (Secrétaires d'Etat). Taking
 | a narrower definition of the French cabinet and counting solely
 | female ministers formally part of the Conseil des ministres, the
 | number of female ministers is 16. They are denoted by a "#"
 | after their name in the below list.

| Following the CSES Macro Report and Bendjaballah and Sauger
 | (2023), F5021_ variables classify the French cabinet as of
 | January 1, 2022. The female members of the cabinet and the
 | portfolios they held are (listed in alphabetical order of
 | surname, except for Prime Minister, if applicable):

| Abba (Biodiversity - State Secretary).
 | Bachelot # (Culture).
 | Borne # (Labor, Employment, & Integration).
 | Bourguignon # (Autonomy & Aging).
 | Cluzel (Disabled Persons - State Secretary).
 | Darrieussecq (Memory and Veterans Affairs).
 | de Montchalin # (Public Transformation and Service).
 | El Hairy (Youth and Commitment - State Secretary).
 | Elimas (Priority Education - State Secretary).
 | Girardin # (Minister of the Sea).
 | Gourault # (Minister of Territorial Cohesion and Relations with
 | Local Authorities).
 | Gregory (Social, Inclusive, & Responsible Economy - State Sec.)
 | Hai # (City & Urban Policy).
 | Klinkert # (Integration).
 | Maracineanu # (Sport).
 | Moreno # (Gender Equality, Diversity, and Equal Opportunities).
 | Pannier-Runacher # (Industry).
 | Parly # (Armed Forces).
 | Pompili # (Ecological Transition).
 | Schiappa # (Citizenship).
 | Vidal # (Higher Education, Research, & Innovation).
 | Wargon # (Housing).

| However, researchers are advised there was a minor cabinet
 | reshaping in March 2022: Elimas and Gourault - two female
 | cabinet members listed above - left the cabinet. Gourault's
 | portfolio (Territorial Cohesion and Relations with Local
 | Authorities) was acceded to Joel Giraud (State Secretary for
 | Rurality). Hence, Giraud held two portfolios until the
 | dissolution of government on May 16, 2022.

| ELECTION STUDY NOTES - MONTENEGRO (2023): F5021_

| Three additional posts, unaccounted in variables F5021_A -
 | F5021_NP were held by:

- | - Albanian Alternative - one post
- | - Croatian Civic Initiative - one post
- | - Democratic Party - one post.

| ELECTION STUDY NOTES - MONTENEGRO (2023): F5021_W1

| At the time of the cabinet formation, there was one additional
| female member of the cabinet - Dr. Jovana Marovic, Deputy Prime
| Minister for Foreign Policy, European Integration and Regional
| Cooperation and Minister of European Affairs.

| The female members of the cabinet and the portfolios they held
| are (listed in alphabetical order of surname, except for
| Prime Minister if applicable):

| Novakovic Durovic (Ecology, Spatial Planning, & Urbanism).
| Scepanovic (Science and Technological Development).
| Vlaovic (Culture and Media).

| ELECTION STUDY NOTES - NEW ZEALAND (2023): F5021_W1

| The female members of the cabinet and the portfolios they held
| are (listed in alphabetical order of surname, except for
| Prime Minister if applicable):

| Andersen (Police, Seniors, Digital Economy, & Communications).
| Edmonds (Economic Development, Pacific Peoples, & Internal
| Affairs).
| Jean Prime (Conservation & Youth).
| Mahuta (Foreign Affairs).
| Radhakrishnan (Diversity & Inclusion, Community, and Disability
| Affairs).
| Sepuloni (Deputy Prime Minister; Employment & Social Development;
| Arts & Culture).
| Tinetti (Education & Women).
| Verrall (Health, Research, Science, & Innovation).
| Woods (Housing & Infrastructure).

| ELECTION STUDY NOTES - NORTH MACEDONIA (2024): F5021_A - F5021_I

| Additional posts, unaccounted in the F5021_A to I variables,
| were held by:

- | - Liberal Democratic Party (LDP) - member of the coalition led
| by Party B - one post
- | - Alliance for Albanians (AA) - member of the coalition led by
| Party C - three posts

| ELECTION STUDY NOTES - NORTH MACEDONIA (2024): F5021_W1

| The female members of the cabinet and the portfolios they held
| are (listed in alphabetical order of surname, except for
| Prime Minister, if applicable):

| Grkovska (Deputy Prime Minister).
| Kostadinovska Stojchevska (Culture).
| Petrovska (Defence).
| Shukova (Environment & Physical Planning).
| Trenchevska (Labor & Social Welfare).

| ELECTION STUDY NOTES - POLAND (2023): F5021_

=====

| Data provided in F5021_ correspond to the Second Cabinet of
 | Mateusz Morawiecki (20th Cabinet of Poland; Date formed:
 | November 15, 2019, date dissolved: November 27, 2023).
 |
 | Out of the listed 23 seats, 21 seats were obtained by Law and
 | Justice (Prawo i Sprawiedliwosc - PiS) - the leading member of
 | the coalition under Party A. The two remaining seats were
 | received by the Republicans (Partia Republikańska, Republikanie)
 | - a junior member of the coalition under Party A.

| ELECTION STUDY NOTES - POLAND (2023): F5021_W1
 |
 | The female members of the Second Morawiecki Cabinet and the
 | portfolios they held are (listed in alphabetical order of
 | surname, except for Prime Minister if applicable):
 |
 | Maląg (Family & Social Policy).
 | Moskwa (Climate & Environment).
 | Rzeczkowska (Finance).
 | Sojka (Health).
 | Scigaj (Minister without portfolio).

| ELECTION STUDY NOTES - PORTUGAL (2022): F5021_W1 & F5021_W2
 |
 | Eight female ministers are classified, although Francisca Van
 | Dunem took over the Internal Administration Ministry on December
 | 4, 2021, in addition to her responsibilities as Justice Minister
 | after the resignation of Eduardo Carbrita, who had resigned in a
 | scandal over his official drivers' alleged involvement in a road
 | traffic accident.
 |
 | The female members of the cabinet and the portfolios they held
 | are (listed in alphabetical order of surname, except for
 | Prime Minister, if applicable):
 |
 | Abrunhosa (Territorial Cohesion).
 | do Ceu Antunes (Agriculture).
 | Fonseca (Culture).
 | Leitaó (Modernization of the State and Public Administration).
 | Mendes Godinho (Labor, Solidarity, and Social Security).
 | Temido (Health).
 | Van Dunem (Justice & Internal Administration).
 | Vieira da Silva (Presidency of the Council of Ministers).
 |
 | The Minister of the Presidency heads the Presidency of the
 | Council of Ministers (PCM), the government department that
 | supports the Portuguese cabinet and the Prime Minister.
 | Essentially, the minister is responsible for inter-minister
 | co-ordination and manages cross-ministry or sectoral issues for
 | the government.

| ELECTION STUDY NOTES - PORTUGAL (2024): F5021_W1
 |
 | The female members of the cabinet and the portfolios they held

| are (listed in alphabetical order of surname, except for
 | Prime Minister, if applicable):
 |
 | Abrunhosa (Territorial Cohesion).
 | Antunes (Agriculture and Food).
 | Carreiras (National Defence).
 | Fortunato (Science, Technology & Higher Education).
 | Godinho (Labor, Solidarity, & Social Security).
 | Goncalves (Housing).
 | Mendes (Parliamentary Affairs & Minister at the Prime Minister
 | Office).
 | Sarmiento e Castro (Justice).
 | Vieira da Silva (Presidency of the Council of Ministers).
 |
 | The Parliamentary Affairs & Minister at the Prime Minister Office
 | is responsible for managing relations between the executive and
 | parliament and focuses on inter-institutional co-ordination.
 | The Minister of the Presidency heads the Presidency of the
 | Council of Ministers (PCM), the government department that
 | supports the Portuguese cabinet and the Prime Minister.
 | Essentially, the minister is responsible for inter-minister
 | co-ordination and manages cross-ministry or sectoral issues for
 | the government.

| ELECTION STUDY NOTES - SLOVAKIA (2023): F5021_A-I

| The cabinet composition recorded in the data reflects the
 | partisan makeup of the Heger government, which served in office
 | until May 2023. The subsequent technocratic cabinet led by
 | Ludovit Odor (May-October 2023) was comprised entirely of
 | Independent members and had a total of 16 members.

| ELECTION STUDY NOTES - SLOVAKIA (2023): F5021_D

| PARTY D (OL'aNO) comprises eight members of OL'aNO and two
 | members of For The People (Za Ludi, NUMERICAL CODE 703019), who
 | competed together in the 2023 elections and thus are combined.
 | The remaining three posts in cabinet were held by We Are Family
 | (Sme Rodina, NUMERICAL CODE 703011).

| ELECTION STUDY NOTES - SLOVAKIA (2023): F5021_W1

| Below are the female cabinet members in the OL'aNO (PARTY D) led
 | coalition government led by Eduard Heger and in office pre its
 | resignation on May 7, 2023. The female members of this cabinet
 | and the portfolios they held are (listed in alphabetical order
 | of surname, except for Prime Minister, if applicable):

| Milanova (Culture).
 | Remesova (Deputy Prime Minister & Regional Development).

| The data reflects the Heger government's female cabinet
 | representation.

| Below are the female cabinet members in the technocratic
 | government led by interim Prime Minister Ludovit Odor, in office
 | from May 7, 2023. The female members of this cabinet and the
 | portfolios they held are (listed in alphabetical order of
 | surname, except for Prime Minister, if applicable):

| Dubovcova (Justice).
 | Gaborcava (Social, Family, & Labor Affairs).
 | Hroncova (Culture).
 | Vasakova (Deputy Prime Minister, EU Subsidies, & Economic
 | Recovery).

| ELECTION STUDY NOTES - SLOVAKIA (2023): F5021_NP

| The data reflects the Heger government and its independent
 | cabinet representation. However, the Odor government, in office
 | from May 7, 2023, until the new government took office post the
 | September 2023 elections was comprised entirely of Independents
 | (N=16; 100%).

| ELECTION STUDY NOTES - SLOVENIA (2022): F5021_A - F5021_I

| Four additional posts, unaccounted in the F5021_A to I variables,
 | were held by Party of Modern Center (SMC) - economy, education,
 | justice, and public administration.

| ELECTION STUDY NOTES - SLOVENIA (2022): F5021_W1

| The female members of the cabinet and the portfolios they held
 | are (listed in alphabetical order of surname, except for
 | Prime Minister if applicable):

| Jaklitsch (Office of the Government for Slovenes Abroad).
 | Kustec (Education, Science, & Sport).

| The Office of the Government for Slovenes Abroad is a specialized
 | department responsible for the Slovenian diaspora, focusing on
 | Slovene minorities in neighboring countries and the broader
 | diaspora worldwide. The Office supports cultural, educational,
 | and community organizations, and strengthens ties between
 | Slovenia and the community abroad.

| ELECTION STUDY NOTES - SWEDEN (2022): F5021_W1

| The female members of the cabinet and the portfolios they held
 | are (listed in alphabetical order of surname, except for
 | Prime Minister if applicable):

| Andersson (Prime Minister).
 | Axelsson Kihlblom (Schools).
 | Ekstrom (Education).
 | Emkrans (International Development Cooperation).
 | Gustafsdotter (Culture & Democracy).
 | Hallengren (Health).

| Karkainen (Public Administration).
 | Nordmark (Employment & Gender Equality).
 | Strandhall (Environment & Climate).
 | Satherberg (Rural Affairs).
 |
 | Lena Hallengren was Minister for Health, but resigned on
 | October 6, 2022 (after the elections), when she was elected
 | Social Democratic Party (PARTY A) leader in the Riksdag. Social
 | Security Minister Ardalan Shekrabi was appointed interim Health
 | Minister until October 18, 2022, when a new government took
 | office. As Hallengren was Health Minister at the time of the
 | election, she is classified in the CSES count of female cabinet
 | ministers.
 |
 | In Sweden, ministers with their own defined portfolios, even if
 | within the same ministry, can sit in cabinet simultaneously.

| ELECTION STUDY NOTES - SWITZERLAND (2023): F5021_W1
 |
 | The female members of the cabinet and the portfolios they held
 | are (listed in alphabetical order of surname, except for
 | Prime Minister if applicable):
 |
 | Amherd (Defense & Sport).
 | Baume-Schneider (Justice).
 | Keller-Sutter (Finance).

| ELECTION STUDY NOTES - TAIWAN (2024): F5021_W1
 |
 | The female members of the cabinet and the portfolios they held
 | are (listed in alphabetical order of surname, except for
 | Prime Minister if applicable):
 |
 | Chang (Chairperson of the Atomic Energy Council, AEC).
 | Chuang (Finance).
 | Hsu (Overseas Community Affairs Council, OCAC).
 | Kuan (Ocean Affairs Council, OAC).

| ELECTION STUDY NOTES - TURKIYE (2023): F5021_W1 & F5021_W2
 |
 | The data refers to the number of female cabinet members ahead of
 | the 2023 elections (one female member). At the time of the
 | previous cabinet formation in July 2018, the cabinet comprised
 | two women. From April 2021, there was only a single female
 | cabinet member, which is classified here.
 |
 | The female member of the cabinet and the portfolio she held are:
 | Yanik (Family, Labor and Social Services).

| ELECTION STUDY NOTES - TURKIYE (2023): F5021_A & F5021_NP
 |
 | While some of the ministers are labeled "independent" in various
 | public sources, according to the Macro Report, all the ministers
 | were affiliated with the Justice and Development Party (Adalet

| ve Kalkinma Partisi - AKP) - PARTY A. Coding for F5021_ follows
| the Macro Report.

| ELECTION STUDY NOTES - UNITED STATES (2024): F5021_B & F5021_NP

| The party affiliation of US cabinet members is not always
| explicit and often ambiguous, with US Presidents often appointing
| members whose partisan identity is unclear. Theoretically, the
| US cabinet is supposed to be administrative, expert, and
| apartisan, but in practice it is deeply political and most
| appointees have political backgrounds, and appointments are
| politically aligned with the President's party. While in office,
| they are technically officers of the executive branch. Each
| officeholder is classified according to the best available
| information on the previous affiliation with which the
| officeholder is most publicly and consistently affiliated at the
| time of appointment, not merely the formal partisanship of the
| party holding the Presidency.

| ELECTION STUDY NOTES - UNITED STATES (2024): F5021_W1

| The female members of the cabinet and the portfolios they held
| are (listed in alphabetical order of surname, except for
| Prime Minister if applicable):

| Granholm (Energy Secretary).
| Greenfield (UN Ambassador).
| Guzmann (Administrator of Small Business).
| Haaland (Interior Secretary).
| Haines (Director of National Intelligence).
| Harris (Vice President).
| Prbhakar (Office of Science & Technology).
| Raimondo (Commerce Secretary).
| Su (Labor Secretary, acting recess appointment).
| Tai (US Trade Representative).
| Toddman (Housing and Urban Development, acting
| recess appointment).
| Yellen (Treasury Secretary).

| A recess appointment is a temporary appointment made by the US
| President to fill an executive or cabinet-level position when the
| Senate is not in session and therefore unable to provide its
| constitutional advice and consent. Most cabinet-level positions
| in the United States cabinet require majority Senate approval.

| The Administration of Small Business portfolio heads a federal
| agency whose mission is to support small businesses and
| entrepreneurship. A direct equivalent outside of the US is rare
| with most other states usually housing responsibility for

| ministry.

F5022_1 >>> GOVERNMENT AFTER: SINGLE PARTY OR COALITION GOVERNMENT

Was the government after the election a single party, or coalition government, or an institutionalized coalition government?

- 0. SINGLE PARTY GOVERNMENT
- 1. COALITION GOVERNMENT
- 2. INSTITUTIONALIZED COALITION GOVERNMENT
- 9. MISSING

VARIABLE NOTES: F5022_1

F5022_1 classifies whether the incoming government was a single party government or a coalition government. A coalition government is classified as a government including cabinet ministers of more than one party.

SINGLE PARTY GOVERNMENT: A government in which one political party holds all executive power.

COALITION GOVERNMENT: A government formed voluntarily by two or more political parties that share executive power. Parties in the coalition agree on a common policy program and a division of ministerial portfolios. Their composition depends on parliamentary arithmetic.

INSTITUTIONALIZED COALITION: A government where multi-party powersharing is mandated by constitutional rules or convention. While the precise composition of the government depends on parliamentary arithmetic, the same parties or groups are guaranteed representation in the executive regardless of the election.

Minority governments relying on confidence and supply arrangements with other actors in parliament are not classified as coalition governments unless actors from multiple parties sit and have a vote in cabinet.

The measure does not specify whether the government commands a majority of seats in parliament.

In case of a caretaker government, e.g., after a collapse of the government, the party affiliations of its (remaining) members are used to code the incoming government variable.

Source of data: Publicly available sources & CSES Macro Report M3c.

F5022_2 >>> SIZE OF THE CABINET AFTER ELECTION

M03d. The size of the cabinet after the election.

00.00-99.00 SIZE OF THE CABINET

999.00 MISSING

VARIABLE NOTES: F5022_2

F5022_2 details the total cabinet size after the election. For a definition of total cabinet size as adopted by CSES, see VARIABLE NOTES for F5022_2.

F5022_2 details the total cabinet size before the election, based on the following definition adopted by CSES:

- a) Parliamentary and Semi-Presidential Regimes:
 Cabinet size is defined by the total number of ministers (persons, not posts) in a defined government. Ministers are considered members of a cabinet when they exercise voting rights. This number includes both ministers with and without portfolio and the Prime Minister, but excludes deputy ministers, undersecretaries, parliamentary secretaries, ministerial alternates, given that in the majority of cases, they do not exercise full voting rights.
- b) Presidential Regimes:
 Cabinet size is defined by the total number of people holding ministries or secretaries who head a ministry.

In case of a caretaker government, e.g., after a collapse of the government, the number of its (remaining) members are used to code the outgoing cabinet size.

Source of data: CSES Macro Report M3d.

ELECTION STUDY NOTES - FRANCE (2022): F5022_2

In France, only full ministers and the Prime Minister are members of the Conseil des ministres, the French constitutional cabinet. It is only these ministers who have the right to attend cabinet and the symbolic right to vote at cabinet. Yet, as France's junior ministers are politically appointed, exercise executive authority, and many regularly attend and participate in cabinet, and thus are seen as part of the government's leadership, even if not formally included in the Conseil des ministres. F5021_2 classifies the complete French cabinet and includes junior ministers (Ministres delegues) and Secretaries of State (Secrétaires d'Etat).

| VARIABLE NOTES: F5022_A-I, F5022_W_, & F5022_NP

| Parties/coalitions and their alphabetical classifications for
| each election study are detailed in Part 3 of the CSES Codebook.

| Ministers are considered those members of government who are
| members of the Cabinet and who have Cabinet voting rights. This
| includes the Prime Minister. In case of a caretaker government,
| (e.g., after a collapse of the government, the party affiliations
| of its (remaining) members are used to code the incoming
| government variables.

| Cabinet members listed in this variable represent parties/
| coalitions receiving an alphabetical classification by CSES.
| Cabinet members who represent parties/coalitions not receiving
| such a classification are classified by variable F5012, which
| classifies the total size of the cabinet before the election.
| Users are advised to consult the ELECTION STUDY NOTES of variable
| F5012.

| F5022_W1, F5022_W2, and F5022_NP record the number and
| percentage of cabinet ministers belonging to particular
| categories (e.g., women, independents) after the election.
| These classifications are principally based on a count of
| individuals serving at cabinet, rather than a count of the
| portfolios they hold. In many instances, cabinet membership and
| the number of portfolios coincide, but this is not universally
| the case.
| In most instances in CSES, cabinet size is defined as the number

| of persons formally appointed as cabinet-level ministers.
 | However, cross-national practice varies, and in some cases
 | ministers may hold multiple portfolios simultaneously. As a
 | result, the number of cabinet members may not always be
 | equivalent to the number of portfolios. While CSES aims for
 | consistency in counting individuals who constitute the cabinet,
 | there may be some inconsistencies in classifications, reflecting
 | differences in institutional arrangements, local interpretations,
 | and data availability.

| are (listed in alphabetical order of surname, except for
| Prime Minister if applicable):

| Dimitrieska-Kochoska (Finance).
| Janevska (Education & Science).
| Bozhinovska (Energy, Mining, and Mineral Resources).

| ELECTION STUDY NOTES - POLAND (2023): F5022_B

| Out of the listed 13 seats, eleven seats were obtained by Civic
| Platform (Platforma Obywatelska, PO) - the leading member of
| the coalition under Party B. One of the remaining two seats
| was received by the Polish Initiative (Inicjatywa Polska, iPL),
| and another one by Modern (Nowoczesna, .N) - both junior members
| of the coalition under Party B.

| ELECTION STUDY NOTES - POLAND (2023): F5022_W1

| The female members of the cabinet and the portfolios they held
| are (listed in alphabetical order of surname, except for
| Prime Minister if applicable):

| Buczynska (Civil Society).
| Czarnecka (Industry).
| Dziemianowicz-Bak (Family, Labor, & Social Policy).
| Hennig-Kloska (Climate and Environment).
| Kotula (Equality).
| Leszczyna (Health).
| Nowacka (Education).
| Okla-Drewnowicz (Senior Citizens Affairs).
| Pelczynska-Nalecz (Funding and Regional Policy).

| The Civil Society ministry is responsible for non-governmental
| organizations like NGOs with its role involving management of
| grant schemes for the NGO sector, oversight of their functions,
| and coordination between civil society actors and the government.

| ELECTION STUDY NOTES - PORTUGAL (2022): F5022_W1

| The female members of the cabinet and the portfolios they held
| are (listed in alphabetical order of surname, except for
| Prime Minister, if applicable):

| Abrunhosa (Territorial Cohesion).
| Carreiras (National Defense).
| Catarina Mendes (Minister in the Cabinet of the Prime Minister
| and for Parliamentary Affairs).
| do Ceu Antunes (Agriculture and Food).
| Fortunato (Science, Technology, and Higher Education).
| Mendes Godinho (Labor, Solidarity, & Social Security).
| Sarmiento e Castro (Justice).
| Temido (Health).
| Vieira da Silva (Minister of State for the Presidency).

| The Minister of the Presidency heads the Presidency of the
| Council of Ministers (PCM), the government department that
| supports the Portuguese cabinet and the Prime Minister.
| Essentially, the minister is responsible for inter-minister
| co-ordination and manages cross-ministry or sectoral issues for
| the government.

| ELECTION STUDY NOTES - PORTUGAL (2024): F5022_W1

| The female members of the cabinet and the portfolios they held
| are (listed in alphabetical order of surname, except for

 | Simkovicova (Culture).

| ELECTION STUDY NOTES - SLOVENIA (2022): F5022_2

| The government had 20 ministers assigned a particular portfolio,
 | including the Prime Minister, with one minister serving as
 | Minister without Portfolio.

| ELECTION STUDY NOTES - SLOVENIA (2022): F5022_W1

| The female members of the cabinet and the portfolios they held
 | are (listed in alphabetical order of surname, except for
 | Prime Minister if applicable):

| Bratusek (Infrastructure).
 | Calusic (Agriculture, Forestry, & Food).
 | Fajon (Deputy Prime Minister and Foreign & European Affairs).
 | Katic (Justice).
 | Klampfer (Digital Transformation).
 | Prevolnik Rupel (Health).
 | Vrecko (Culture).

| ELECTION STUDY NOTES - SWEDEN (2022): F5022_W1

| The female members of the cabinet and the portfolios they held
 | are (listed in alphabetical order of surname, except for
 | Prime Minister if applicable):

| Ankarberg Johansson (Health).
 | Brandberg (Gender Equality).
 | Busch (Deputy Prime Minister and Energy & Enterprise).
 | Edholm (Schools, Higher Education, and Research).
 | Liljestr nd (Culture).
 | Malmer Stenergrad (Migration).
 | Mohamsson (Education & Integration).
 | Pourmokhtari (Environment).
 | Roswall (EU Affairs & Nordic Cooperation).
 | Svantesson (Finance).
 | Tenje (Social Security & Pensions).
 | Waltersson Gronvall (Social Services).

| In Sweden, ministers with their own defined portfolios, even if

| within the same ministry, can sit in cabinet simultaneously.

| ELECTION STUDY NOTES - SWITZERLAND (2023): F5022_W1

| The female members of the cabinet and the portfolios they held
 | are (listed in alphabetical order of surname, except for
 | Prime Minister, if applicable):

| Amherd (Defense & Sport).
 | Baume-Schneider (Home Affairs).
 | Keller-Sutter (Finance).

| ELECTION STUDY NOTES - TAIWAN (2024): F5022_W1

| The female members of the cabinet and the portfolios they held
 | are (listed in alphabetical order of surname, except for
 | Prime Minister, if applicable):

| Chen (Directorate-General of Budget, Accounting, & Statistics).
 | Cheng (Vice Premier).
 | Chuang (Finance).
 | Ho (Labor).
 | Hsu (Overseas Community Affairs Council).
 | Ku (Hakka Affairs Council).
 | Kuan (Ocean Affairs Council).
 | Liu (Interior).

| The Hakka Affairs Council ministry focuses on Hakka cultural
 | preservation and revitalization and support for this community.
 | The council exists as the Hakka are one of Taiwan's major ethnic
 | cultural groups.

| ELECTION STUDY NOTES - TURKIYE (2023): F5022_A & F5022_NP

| While some of the ministers are labeled "independent" in various
 | public sources, according to the Macro Report, all the ministers
 | were affiliated with the Justice and Development Party (Adalet
 | ve Kalkinma Partisi - AKP) - PARTY A. Coding for F5022_ follows
 | the Macro Report.

| ELECTION STUDY NOTES - TURKIYE (2023): F5022_W1

| The female members of the cabinet and the portfolios they held
 | are (listed in alphabetical order of surname, except for
 | Prime Minister if applicable):

| Ozdemir (Family and Social Services).

| ELECTION STUDY NOTES - UNITED STATES (2024): F5022_A & F5022_NP

| The party affiliation of US cabinet members is not always
 | explicit and often ambiguous, with US Presidents often appointing
 | members whose partisan identity is unclear. Theoretically, the
 | US cabinet is supposed to be administrative, expert, and

| apartisan, but in practice it is deeply political and most
 | appointees have political background, and appointments are
 | politically aligned with the President's party. While in office
 | they are technically officers of the executive branch. Each
 | officeholder is classified according to the best available
 | information on the previous affiliation with which the
 | officeholder is most publicly and consistently affiliated at the
 | time of appointment, not merely the formal partisanship of the
 | party holding the Presidency.

| ELECTION STUDY NOTES - UNITED STATES (2024): F5022_W1

| The female members of the cabinet and the portfolios they held
 | are (listed in alphabetical order of surname, except for
 | Prime Minister if applicable):

| Bondi (Attorney General).
 | Chavez de Remer (Labor).
 | Loeffler (Administration of Small Business).
 | McMahon (Education).
 | Noem (Homeland Security).
 | Rollins (Agriculture).
 | Wiles (White House Chief of Staff).

| The Administration of Small Business portfolio heads a federal
 | agency whose mission is to support small businesses and
 | entrepreneurship. A direct equivalent outside of the US is rare
 | with most other states usually housing responsibility for
 | enterprise policy for small and medium businesses in an economics
 | ministry.

M03i. Party/Coalition of the Finance, Foreign, and Health Minister
 BEFORE and AFTER the election.

000001-999987. [SEE PART 3 OF CODEBOOK FOR NUMERICAL PARTY/
 COALITION CODES]

999989. INDEPENDENT CANDIDATE

999997. NOT APPLICABLE: PRESIDENTIAL SYSTEMS

999999. MISSING

| VARIABLE NOTES: F5023_

| F5023_ details the party holding the role of Finance Minister, Foreign (External) Affairs, and Health Minister, both before and after the election in parliamentary systems. In case of a caretaker government, e.g., after a collapse of the government, the party affiliations of its (remaining) members are used to code the outgoing government variables.

| A Finance Ministry or Department is conventionally the government body responsible for managing a polity's fiscal and economic affairs. Its core functions typically include formulating fiscal and economic policy, taxation, the budget, managing government revenue and debt, and in certain polities may also be responsible for public expenditure. In some polities some of these responsibilities may be shared or divided across multiple departments/ministries and where applicable this will be noted in ELECTION STUDY NOTES. In these circumstances, CSES classifies the Finance Ministry as the senior ministry - i.e., the ministry responsible for formulating macro fiscal and economic policy and the ministry that represents the polity in national economic forums like the International Monetary Fund or the World Bank.

| A Foreign (External Affairs) Ministry or Department is conventionally the government body responsible for conducting a polity's external relations and representing the polity in international affairs. Its core functions typically include managing diplomatic relations, conducting negotiations and devising treaties, and representing the polity in international forums like the UN, the EU, consular services, and overseeing foreign aid. In some polities, some of these responsibilities may be shared or divided across multiple departments/ministries and where relevant/applicable this will be noted in ELECTION STUDY NOTES.

| A Health Ministry or Department is conventionally the government body responsible for public health at the national level. Its core functions typically include managing public health programs and infrastructure, organizational responsibilities, regulation of healthcare providers and the pharmaceutical sector, and disease prevention and management. In some polities, some of these responsibilities may be shared or divided across multiple departments/ministries and where relevant/applicable, this will be noted in ELECTION STUDY NOTES. In many polities, significant health responsibilities are delegated to regional or sub-national authorities. The CSES classification refers to the national/federal ministry only.

| Parties/coalitions and their numerical and alphabetical classifications for each election study are detailed in Part 3 of the CSES Codebook.

| Source of data: CSES Macro Report M3i.

| ELECTION STUDY NOTES - AUSTRALIA (2022): F5023_

| In Australia, the Treasurer is the senior minister responsible for economic policy, which includes taxation, public debt, government spending, and the overall direction of economic policy. The finance minister in Australia has a separate role, supplementing the work of the Treasurer, although working closely with them. This position is junior to the Treasurer and focuses on the administration of government expenditure. CSES classifies the finance minister in Australia based on which party and who occupies the Treasurer position, as it is the senior minister responsible for economic policy. After the 2022 election, it was revealed that the outgoing Prime Minister Scott Morrison (PARTY B - Liberal Party) had secretly taken on additional ministerial powers during the COVID-19 crisis, including the Treasury and Health portfolios. The revelations prompted a government inquiry led by a former High Court justice. CSES classifies the ministers officially in their respective offices and accordingly does not codify the Morrison joint ministerial arrangement.

| ELECTION STUDY NOTES - BRAZIL (2022): F5023_1 & F5023_2

| In 2019, a new super Economic Ministry was created in Brazil, incorporating the responsibilities of the Finance Ministry, the Industry Ministry, and international trade operations. Thus, CSES classifies the Finance Minister in Brazil before the election (variable F5023_1) based on the occupant of this office (Minister for the Economy). The Ministry of Finance was re-established as a separate ministry in the aftermath of the 2022 Presidential elections in the Lula da Silva administration and CSES classifies the Finance Minister after the election (variable F5023_2) based on the occupant of this office.

| ELECTION STUDY NOTES - SWEDEN (2022): F5023_3 & F5023_4

| In Sweden, the responsibility for Nordic Cooperation is a separate portfolio, which conventionally has been institutionally distinct from the Foreign Affairs Ministry. This minister is responsible for handling Sweden's participation in the intergovernmental structures of the Nordid region and focuses on regional cooperation. This division reflects the novel institutional status of the Scandinavian region. The Minister for Nordic Cooperation before the election was Anna Hallberg (PARTY A - 752001. Swedish Social Democrats). The Minister for Nordic Cooperation after the election was Jessica Rosencrantz (PARTY C - 752003. Moderate Party).

| ELECTION STUDY NOTES - TURKIYE (2023): F5023_

| While some of the ministers are labeled "independent" in various

| public sources, according to the Macro Report, all the ministers
 | were affiliated with the Justice and Development Party (Adalet
 | ve Kalkinma Partisi - AKP) - PARTY A.

In these circumstances, CSES classifies the Finance Ministry as the senior ministry - i.e.,

| the ministry responsible for formulating macro fiscal and
 | economic policy and the ministry that represents the polity in
 | national economic forums like the International Monetary Fund or
 | the World Bank.

| A Foreign (External Affairs) Ministry or Department is
 | conventionally the government body responsible for conducting a
 | polity's external relations and representing the polity in
 | international affairs. Its core functions typically include
 | managing diplomatic relations, conducting negotiations and
 | devising treaties, and representing the polity in international
 | forums like the UN, the EU, consular services, and overseeing
 | foreign aid. In some polities, some of these responsibilities
 | may be shared or divided across multiple departments/ministries
 | and where relevant/applicable, this will be noted in ELECTION
 | STUDY NOTES.

| A Health Ministry or Department is conventionally the government
 | body responsible for public health at the national level.
 | Its core functions typically include managing public health
 | programs and infrastructure, organizational responsibilities,
 | regulation of healthcare providers and the pharmaceutical sector,
 | and disease prevention and management. In some polities, some of
 | these responsibilities may be shared or divided across multiple
 | departments/ministries and where relevant/applicable, this will
 | be noted in ELECTION STUDY NOTES. In many polities, significant
 | health responsibilities are delegated to regional or
 | sub-national authorities. The CSES classification refers to
 | the national/federal ministry only.

| In case of a caretaker government, e.g., after a collapse of
 | the government, its (remaining) members are used to code the
 | outgoing government variables.

| Source of data: CSES Macro Report M3h.

| ELECTION STUDY NOTES - AUSTRALIA (2022): F5026_1 & F5026_2

| In Australia, the Treasurer is the senior minister responsible
 | for economic policy, which includes taxation, public debt,
 | government spending, and the overall direction of economic
 | policy. The finance minister in Australia has a separate role,
 | supplementing the work of the Treasurer, although working
 | closely with them. This position is junior to the Treasurer
 | and focuses on the administration of government expenditure.
 | CSES classifies the finance minister in Australia based on which
 | party and who occupies the Treasurer position as it is the
 | senior minister responsible for economic policy.
 | After the election, Jim Chalmers (PARTY A - 036001. Labor Party)
 | was selected as Treasurer. Katy Gallagher (PARTY A - 036001.
 | Labor Party) was chosen as Finance Minister.

| ELECTION STUDY NOTES - BRAZIL (2022): F5023_1 & F5023_2

| In 2019, a new super Economic Ministry was created in Brazil, incorporating the responsibilities of the Finance Ministry, the Industry Ministry, and international trade operations. Thus, CSES classifies the Finance Minister in Brazil before the election (variable F5025_1) based on the occupant of this office (Minister for the Economy).
 | The Ministry of Finance was re-established as a separate ministry in the aftermath of the 2022 Presidential elections in the Lula da Silva administration and CSES classifies the Finance Minister after the election (variable F5025_2) based on the occupant of this office.

| ELECTION STUDY NOTES - SWEDEN (2022): F5026_3 & F5026_4

| In Sweden, the responsibility for Nordic Cooperation is a separate portfolio, which conventionally has been institutionally distinct from the Foreign Affairs Ministry. This minister is responsible for handling Sweden's participation in the intergovernmental structures of the Nortid region and focuses on regional cooperation. This division reflects the novel institutional status of the Scandinavian region.
 | The Minister for Nordic Cooperation before the election was Anna Hallberg (PARTY A - 752001. Swedish Social Democrats).
 | The Minister for Nordic Cooperation after the election was Jessica Rosencrantz (PARTY C - 752003. Moderate Party).

 F5027_1 >>> PERCENTAGE OF FEMALES IN PARLIAMENT - TIME T
 F5027_2 >>> PERCENTAGE OF FEMALES IN PARLIAMENT - TIME T-4
 F5027_3 >>> PERCENTAGE OF FEMALES IN PARLIAMENT - TIME T-8

Percentage of Females in Parliament at three different time intervals (year of election, T-4, T-8).

00.00-100.00 PERCENTAGE OF FEMALES IN PARLIAMENT

999. MISSING

| VARIABLE NOTES: F5027_1-3

| F5027_1-3 report the percentage of females in parliament at three time periods: the election year (time T), four years before election (T-4), and eight years before election (T-8).

| Source of data:

| - World Bank (n.d.). Proportion of seats held by women in national parliaments (%). Available at: <https://data.worldbank.org/indicator/SG.GEN.PARL.ZS>
 | (Date accessed: December 12, 2025).

| Users are advised that there is normally a two or three-year time

lag between these estimates becoming available. Consequently, for Advance Releases of the CSES (and possibly Full Releases), data may not be available at the time of coding. In circumstances where this occurs, the polity will be listed as DATA UNAVAILABLE in the VARIABLE NOTES below. Should data become available between an Advance Release of CSES and a Full Release of CSES, data for these polities will be included in a subsequent release of the CSES.

Data for F5027_1 are unavailable for MONTENEGRO (2023), NORTH MACEDONIA (2024), POLAND (2023), and TURKIYE (2023).

F5027_4 >>> YEAR IN WHICH FEMALES OBTAINED RIGHT TO VOTE IN POLITY

Year in which Female citizens obtained the right to vote in
national elections for the lower house in the polity.
.....

1893-1971	YEAR IN WHICH FEMALES OBTAINED RIGHT TO VOTE
9999.	MISSING

| VARIABLE NOTES: F5027_4
|
| F5027_4 reports the year in which females obtained the right to
| vote in national elections to the lower house under law (de
| jure). For successor states, the classification reflects in which
| the franchise was first extended to women in the territory
| that constitutes the present-day state, regardless of whether
| the current state existed in its current form at the time. Such
| instances are noted in ELECTION STUDY NOTES below.
| The classification principally refers to the formal extension of
| the right to vote for women but in some polities, significant
| segments of the population remained effectively disenfranchised
| for reasons such as racial, ethnic, literacy, or property
| restrictions. These instances are noted in ELECTION STUDY NOTES
| below.
|
| Source of data: IPU Parline: Global Data on National Parliaments
| Historical data on women - Women's suffrage. Available at:
| <https://data.ipu.org/data-explorer/> (Date accessed: June 07,
| 2024).

| ELECTION STUDY NOTES - MONTENEGRO (2024): F5027_4
|
| The data refers to when women were first granted the right to
| vote in 1945, when the territory of present-day Montenegro
| was a constituent republic of Yugoslavia. Upon the country's
| formal independence in 2006, this franchise right was maintained
| and carried over into the legal framework of the new state.

| ELECTION STUDY NOTES - NORTH MACEDONIA (2024): F5027_4

| The data refers to when women were first granted the right to vote in 1945, when the territory of present-day North Macedonia was a constituent republic of Yugoslavia. Upon the country's formal independence in 1991, this franchise right was maintained and carried over into the legal framework of the new state.

| ELECTION STUDY NOTES - SLOVAKIA (2023): F5027_4

| Slovak females gained the right to vote under the Czechoslovakia Constitution in 1920, and thus by the time of Slovak statehood in 1993, female voting rights had been long established. CSES classifies the introduction from 1920 onwards, although technically, the moment of introduction in Slovakia occurred with Slovakian statehood in 1993, with the right was inherited from the Czechoslovakia constitution.

| ELECTION STUDY NOTES - TAIWAN (2024): F5027_4

| The Constitution that came into effect on December 25, 1947, granted universal suffrage to all citizens aged 20 and above, regardless of sex. This Constitution was first applied in the 1948 elections and used for classifying F5027_4.

| ELECTION STUDY NOTES - UNITED STATES (2024): F5027_4

| The 19th Amendment to the US Constitution in 1920 granted women the constitutional right to vote nationwide. However, racial discrimination including literacy tests and poll taxes continued to disenfranchise African American and other women of color. The Voting Rights Act of 1965 effectively extended full voting rights enforcement to all female citizens regarding race or ethnicity. Therefore, 1920 marks the formal enfranchisement as classified here, but 1965 arguably marks the substantive universal realization of female franchise in the United States.

| Parties/coalitions and their numerical and alphabetical
 | classifications for each election study are detailed in Part 3
 | of the CSES Codebook.

| F5028_ detail the expert judgment of the national Collaborators
 | as to which ideological family each party belongs to. Often
 | Collaborators provide two characterizations for a party. These
 | multiple characterizations are detailed in the ELECTION STUDY
 | NOTES below with details of what characterization is coded in
 | the dataset.

| Collaborators at times provide additional information to help
 | refine the characterization, and when applicable, these are
 | detailed in the ELECTION STUDY NOTES below.

| Source of data: CSES Macro Report M5a.a-i.

| Data are unavailable for TAIWAN (2024).

| ELECTION STUDY NOTES - NORTH MACEDONIA (2024): F5028_A

| PARTY A (VMRO-DPMNE) was also characterized as belonging to the
 | category of "(10) National Parties".

| ELECTION STUDY NOTES - NORTH MACEDONIA (2024): F5028_B

| PARTY B (SDSM) was also characterized as belonging to the
 | category of "(5) Left Liberal Parties".

| ELECTION STUDY NOTES - NORTH MACEDONIA (2024): F5028_D

| PARTY D (VLEN coalition) was also characterized as belonging to

| the category of "(9) Conservative Parties".

| ELECTION STUDY NOTES - NORTH MACEDONIA (2024): F5028_E

| PARTY E (The Left) was also characterized as belonging to the
| category of "(10) National Parties".

| ELECTION STUDY NOTES - NORTH MACEDONIA (2024): F5028_F

| PARTY F (MOVEMENT ZNAM - For Ours Macedonia) was also
| characterized as belonging to the category of "(4) Social
| Democratic Parties".

| ELECTION STUDY NOTES - POLAND (2023): F5028_G

| PARTY G (Lewica Razem, Razem; English: Left Together) was
| also characterized as belonging to the family of "09.
| Conservative Parties" by national collaborators.

| ELECTION STUDY NOTES - PORTUGAL (2022): F5028_C

| PARTY C (Chega!, English: "Enough") was characterized as
| belonging to the category of "Extreme Right parties".

| ELECTION STUDY NOTES - PORTUGAL (2022): F5028_E

| PARTY E (Bloco de Esquerda, English: Left Bloc) was characterized
| as being "Left Libertarian".

| ELECTION STUDY NOTES - PORTUGAL (2024): F5028_C

| PARTY C (Chega!, English: "Enough") was characterized as
| belonging to the category of "Extreme Right parties".

| ELECTION STUDY NOTES - PORTUGAL (2024): F5028_E

| PARTY E (Bloco de Esquerda, English: Left Bloc) was characterized
| as being "Left Libertarian".

| ELECTION STUDY NOTES - SLOVAKIA (2023): F5028_A

| PARTY A (Direction - Slovak Social Democracy, Smer-SD) was
| characterized as "Social Democratic" but it is noted as becoming
| increasingly nationalist and is moving to the populist right on
| some issues. Only the Social Democratic characterization is coded
| in the dataset, which follows the historical precedence of this
| party being classified this way in CSES.

| ELECTION STUDY NOTES - SLOVAKIA (2023): F5028_C

| PARTY C (Voice - Social Democracy, Hlas-SD) was characterized as
| "Social Democratic" but it is noted as becoming increasingly
| nationalist. Only the first characterization is coded in the
| dataset.

| ELECTION STUDY NOTES - SLOVAKIA (2023): F5028_D

| PARTY D (Ordinary People and Independent Personalities, OL'ANO) was characterized as both "Conservative" and an anti-establishment party. Only the first characterization is coded in the dataset.

| ELECTION STUDY NOTES - SLOVAKIA (2023): F5028_G

| PARTY G (Slovak National Party, SNS) was characterized as both a "Nationalist" and a populist right party. Only the first characterization is coded in the dataset.

| ELECTION STUDY NOTES - SWEDEN (2022): F5028_E

| PARTY E (Center Party, C), originated as an agrarian party (Bondefoerbundet) representing farmers and rural interests. Over time, it has evolved into a liberal party emphasizing decentralization, environmental sustainability, and rural development. While historically coded as agrarian in earlier CSES modules, the data characterizes the party position as Liberal in this module to reflect its ideological shift.

| ELECTION STUDY NOTES - SWITZERLAND (2023): F5028_A

| PARTY A (Swiss People's Party, SVP/UDC) was characterized as both "Nationalist" and a "Conservative" party. Only the first characterization is coded in the dataset.

| ELECTION STUDY NOTES - SWITZERLAND (2023): F5028_D

| PARTY D (The Center, DM/LC) was categorized as both a "Christian Democratic" party and a "Conservative" party. Only the first characterization (Christian Democrat) is coded in the dataset.

| ELECTION STUDY NOTES - SWITZERLAND (2023): F5028_H

| PARTY H (Ticino League) was categorized as both a "Regional" party and a Populist party. Only the first characterization is coded in the dataset.

| ELECTION STUDY NOTES - SWITZERLAND (2023): F5028_I

| PARTY I (Geneva Citizens' Movement, MCG/MCR) was categorized as both a Regional Party (code 13) and a Populist Party. Only the first characterization (Regional) is coded in the dataset.

| VARIABLE NOTES: F5031_

| Parties/coalitions and their numerical and alphabetical
 | classifications for each election study are detailed in Part 3
 | of the CSES Codebook.

| F5031_ details the expert judgment of the national Collaborators
 | as to where parties are located on a populism scale.
 | Definition: Populism can be defined as a thin-centered ideology
 | that pits a virtuous and homogeneous people against a set of
 | elites and dangerous 'others' who are depicted as depriving
 | "the people" of their rights, values, prosperity, identity, and
 | voice. The emphasis on anti-elite/ anti-establishment rhetoric
 | and the contrast between the "pure people" and the "corrupt
 | elite" are thus indications of the degree to which a party is
 | populist. Populist parties can be found across the left-right
 | ideological spectrum.

| Sometimes, parties' levels of populism are hard to determine.
 | These instances are detailed in ELECTION STUDY NOTES below.

| ELECTION STUDY NOTES - POLAND (2023): F5032_3

| "The joint observation mission from the OSCE Office for
 | Democratic Institutions and Human Rights (ODIHR), the OSCE
 | Parliamentary Assembly (OSCE PA) and Council of Europe's
 | Parliamentary Assembly (PACE), found that the legal framework
 | provided a sufficient basis to hold democratic elections. While
 | recent legal amendments incorporated some previous
 | recommendations made by ODIHR, their adoption occurred shortly
 | before the elections and without meaningful public consultation.
 | [...] While the elections in Poland were competitive, we noted
 | the erosion of checks and balances to gain further control over
 | state institutions by the governing party, including the courts
 | and the public media," said OSCE PA head of delegation Pere Joan
 | Pons. "This tilted the playing field, which meant the opposition
 | did not have fully equal opportunities."

F5034_1 >>> ELECTORAL ALLIANCES PERMITTED IN ELECTION

Whether or not electoral alliances/coalitions are legally allowable.

.....

- 0. NO
- 1. YES

9. MISSING

| VARIABLE NOTES: F5034_1

| F5034_1 details whether or not electoral alliances/coalitions (involving joint lists/candidates) are legally allowable. Definitions: A joint list refers to one on which candidates of different parties run together. Apparentement refers to a legal agreement between two or more lists to pool their votes for the purposes of an initial seat allocation, with seats initially allocated to the alliance then reallocated to the lists in the alliance.

| Source of data: CSES Macro Report M10a.

| ELECTION STUDY NOTES - AUSTRALIA (2022): F5034_1

| While electoral alliances are not allowed to form for the House of Representatives election (Lower House), they are permitted for Senate (Upper House) elections. The coding in the data reflects the Lower House situation.

----- F5034_2 >>> ELECTORAL ALLIANCES IN PRACTICE -----

M10b. Is this type of electoral coalition used in practice, even if not legally allowable?

.....

0. NO

1. YES

9. MISSING

| VARIABLE NOTES: F5034_2

| Source of data: CSES Macro Report M10b.

| ELECTION STUDY NOTES - AUSTRIA (2024): F5034_2

| This dynamic varies over time and between elections. There have been instances in previous elections where electoral alliances formed (e.g., in 2013 by NEOS, PARTY D). However, no such alliance was formed in the 2024 election.

| ELECTION STUDY NOTES - SWITZERLAND (2023): F5034_2

| Listing all alliances in detail is challenging because of the sheer number of lists and the fact that such alliances occur mostly in smaller cantons and between minor parties.

 F5034_3 >>> DID ANY ELECTORAL ALLIANCES FORM?

M10c. (If yes to M10a or M10b) Did any electoral alliances form?

- 0. NO
- 1. YES [SEE CODEBOOK PART 3 FOR DETAILS OF ALLIANCES]
- 7. NOT APPLICABLE [NO ALLIANCES PERMITTED]
- 9. MISSING

| VARIABLE NOTES: F5034_3
 |
 | Source of data: CSES Macro Report M10c.
 |
 | Details of alliances and parties/coalitions and their numerical
 | and alphabetical classifications for each election study are
 | detailed in Part 3 of the CSES Codebook.

 F5035 >>> REQUIREMENTS FOR JOINT PARTY LISTS

Whether or not joint lists are subject to different regulations
 than single-party lists.

- 0. NO, JOINT PARTIES ARE GOVERNED BY THE SAME RULES AS OTHER
PARTIES
- 1. YES, JOINT PARTY LISTS MUST SATISFY HIGHER THRESHOLDS
- 2. YES, JOINT PARTY LISTS MAY PRESENT DIFFERENT NUMBERS OF
CANDIDATES
- 3. YES, JOINT PARTY LISTS ARE SUBJECT TO OTHER REGULATIONS
THAT ARE DIFFERENT FROM THE REGULATIONS GOVERNING
INDEPENDENT PARTIES
- 7. NOT APPLICABLE; NO JOINT PARTY LISTS ARE ALLOWED
- 9. MISSING

| VARIABLE NOTES: F5035
 |
 | F5035 details whether joint lists - if permissible - are subject
 | to different regulations than single-party lists (e.g., in terms
 | of higher thresholds, different numbers of candidates that may
 | appear on the list, etc.).

|
 | Source of data: CSES Macro Report M11.
 |
 | ELECTION STUDY NOTES - BRAZIL (2022): F5035
 |
 | This information applies to the lower house Brazilian elections.
 | Joint party lists may present different numbers of candidates,
 | depending on district magnitude.
 |
 | When district magnitude ≥ 20 : a political party can present
 | up to 1.5 candidates for each seat. When there is a joint list,
 | a political party can present up to two candidates for each seat.
 |
 | When district magnitude < 20 : a political party can present
 | up to two candidates for each seat. When there is a joint list,
 | a political party can present up to 2.5 candidates for each seat.
 |
 | ELECTION STUDY NOTES - POLAND (2023): F5035
 |
 | The threshold for individual parties is 5%, while for electoral
 | alliances it is 8% of the valid votes cast nationwide.
 |
 | ELECTION STUDY NOTES - SLOVAKIA (2023): F5035
 |
 | The threshold for political parties to obtain seats is 5% of the
 | valid votes. However, it is higher for electoral alliances
 | comprising more parties:
 | - A threshold of 7% of valid votes for coalitions
 | of two or three parties.
 | - A threshold of 10% of valid votes for coalitions
 | of four parties or more.
 |
 | ELECTION STUDY NOTES - SLOVENIA (2022): F5035
 |
 | Joint party lists are subject to other regulations that are
 | different from the regulations governing independent parties,
 | such as: differences in financing, or party subsidies after
 | the elections.

 F5036_1 >>> THE POSSIBILITY OF APPARENTEMENT

M12a. Is there apparentement or linking of lists?

.....

- 0. NO
- 1. YES

9. MISSING

| VARIABLE NOTES: F5036_1

|
 | Source of data: CSES Macro Report M12a.

 F5036_2 >>> TYPES OF APPARENTEMENT AGREEMENTS

M12b. If apparentement is possible, what lists can participate in such agreements?

-
- 0. NOT APPLICABLE: NO APPARENTEMENT
 - 1. LISTS OF THE SAME PARTY IN THE SAME CONSTITUENCY
 - 2. LISTS OF THE SAME PARTY FROM DIFFERENT CONSTITUENCIES
 - 3. LISTS OF DIFFERENT PARTIES IN THE SAME CONSTITUENCY
 - 9. MISSING

| VARIABLE NOTES: F5036_2
 |
 | Source of data: CSES Macro Report M12b.
 |
 | Please also refer to VARIABLE NOTES for variable F5036_1.

 F5037_1 >>> MULTI-PARTY ENDORSEMENTS

M13a. Can candidates run with the endorsement of more than one party?

-
- 0. NO
 - 1. YES
 - 2. OTHER [SEE ELECTION STUDY NOTES]
 - 7. NOT APPLICABLE
 - 9. MISSING

| VARIABLE NOTES: F5037_1
 |
 | Source of data: CSES Macro Report M13a.
 |
 | ELECTION STUDY NOTES - NEW ZEALAND (2023): F5037_1
 |
 | In New Zealand, each candidate is officially nominated by a single party, and conventionally, only that party name appears on the ballot. However, in practice, cooperative arrangements sometimes occur between allied parties and some parties may not

| contest certain districts if they are allied with another party
 | contesting. Such understandings are usually informal and not
 | registered with the Electoral Commission. Parties can form a
 | joint list by registering as an alliance, but in these
 | circumstances, the alliance name appears on the ballot paper.
 | As informal arrangements effectively are de facto multiparty
 | endorsements, CSES classifies New Zealand as "Yes".

| ELECTION STUDY NOTES - UNITED STATES (2024): F5037_1

| In practice at the Federal level, a candidate is recognized by
 | the Federal Election Commission by its principal campaign
 | committee. However, ballot access and affiliation designations
 | are determined by state laws. Federal laws do not prohibit
 | multiple endorsements, but there is not a formal mechanism for it
 | either. In most states, a candidate for a federal office appears
 | on the ballot only once, under one affiliation. In these states,
 | a candidate must choose one affiliation to appear on the ballot
 | for any office, including President, Senate, or House, even if
 | supported by several affiliations. Nevertheless, in some states,
 | (e.g., New York, Connecticut, Oregon), a candidate may have
 | multiple party endorsements listed on a single ballot line
 | (e.g., Oregon), or candidates can be listed multiple times under
 | different affiliations (e.g., New York and Connecticut).

 F5037_2 >>> MULTI-PARTY ENDORSEMENTS ON BALLOT

M13b. If candidates can run with the endorsement of more than one
 party, is this reflected on the ballot?

.....

- 0. NO
- 1. NO PARTY ENDORSEMENTS ARE INDICATED ON THE BALLOT PAPER
- 2. YES, CANDIDATE'S NAME APPEARS ONCE, TOGETHER WITH THE
 NAMES OF ALL SUPPORTING PARTIES
- 3. YES, CANDIDATE'S NAME APPEARS AS MANY TIMES AS THERE ARE
 DIFFERENT PARTIES ENDORSING HIM/HER, EACH TIME WITH THE
 NAME OF THE ENDORSING PARTY
- 4. YES, OTHER [SEE ELECTION STUDY NOTES]
- 7. NOT APPLICABLE
- 9. MISSING

| VARIABLE NOTES: F5037_2

| Source of data: CSES Macro Report M13b.

| Please also refer to VARIABLE NOTES for variable F5037_1.

| ELECTION STUDY NOTES - UNITED STATES (2024): F5037_2

| In practice at the federal level, in most states, a candidate for
 | a federal office appears on the ballot only once, under one
 | affiliation. But in some states, (e.g., New York, Connecticut,
 | Oregon), a candidate may have multiple party endorsements listed
 | on a single ballot line (e.g., Oregon), or candidates can be
 | listed multiple times under different affiliations (e.g., New
 | York and Connecticut).

 F5038_1 >>> N ELECTORAL TIERS - LOWER HOUSE

M15a. For lower house elections, how many electoral tiers operate?

.....

1. ONE TIER
2. TWO TIERS
3. THREE TIERS
4. OTHER - SEE ELECTION STUDY NOTES
7. NOT APPLICABLE
9. MISSING

| VARIABLE NOTES: F5038_1

| This variable classifies how many electoral tiers a polity
 | operates for lower house elections. Tiers are conventional in
 | PR-list and Mixed Member Systems and are a means of allocating
 | seats depending on different criteria.

| Source of data: CSES Macro Report M15a.

| ELECTION STUDY NOTES - AUSTRIA (2024): F5038_1

| Elections to the 183-seat Nationalrat are conducted under a
 | three-tier system. At the regional level (Regionalwahlkreise), 92
 | basic mandates are distributed across 39 electoral districts. At
 | the state level (Landeswahlkreise), approximately 58 seats are
 | allocated within the nine Laender to improve proportionality
 | within each state. At the federal level (Bundeswahlkreis), the
 | remaining 32 seats are distributed to ensure that each party's
 | final share of seats corresponds to its nationwide vote share.
 | Seat allocation proceeds sequentially through these three tiers.

| ELECTION STUDY NOTES - DENMARK (2022): F5038_1

| The Danish Folketing has 179 members, 175 of whom are elected
 | in mainland Denmark and the remaining four from the territories
 | of Greenland and the Faroe Islands. In mainland Denmark, 135

members are elected from 10 multi-member constituencies across three geographical regions, namely: Copenhagen, Northern Jutland and Seeland-Southern Denmark. Additionally, 40 supplementary seats are distributed across these three geographical regions to achieve full proportionality. While voters do not directly cast a ballot for these supplementary seats, CSES classifies this as a separate tier.

ELECTION STUDY NOTES - SLOVENIA (2022): F5038_1

National Assembly deputies are elected according to the proportional system, using Droop quotients in eight electoral constituencies. The nationwide threshold for entering the parliament is 4% of the total vote. The second tier is represented by those seats that remain unallocated on the bases of election results in primary constituencies.

ELECTION STUDY NOTES - TAIWAN (2024): F5038_1

Taiwan uses a mixed-member majoritarian (MMM) system, and the total number of seats is 113. The seats are distributed via two segments (tiers). The first segment is represented by 73 seats, elected in single-member districts (SMD). The second segment is a nationwide district employing a proportional representation system. In addition, six seats are reserved for aboriginal groups. These seats are elected by single non-transferable vote in two three-member constituencies for lowland aborigines and highland aborigines, respectively.

F5038_2 >>> MULTIPLE ELECTORAL TIERS - LOWER HOUSE - YES/NO

Does the polity operate multiple tiers for lower house elections?

.....

0. NO

1. YES

9. MISSING

VARIABLE NOTES: F5038_2

This variable classifies whether a polity for lower elections operates multiple electoral tiers or not. Tiers are conventional

in PR-list and Mixed Member Systems and are a means of allocating seats depending on different criteria.

Users are advised to consult ELECTION STUDY NOTES for variable F5038_1 for more information on the nature of electoral tiers by polity.

|
 | Source of data: CSES Macro Report M15a & M15b.

 F5038_3 >>> ELECTORAL TIER - LOWER HOUSE - 1ST SEGMENT (TIER) -
 CLASSIFICATION OF BASIS ON WHICH SEATS ARE ALLOCATED

The first electoral tier for lower house elections is based on ...

- 0. ELECTORAL DISTRICTS - SINGLE MEMBER
- 1. ELECTORAL DISTRICTS - MULTI MEMBER
- 2. OTHER - SEE ELECTION STUDY NOTES

- 9. MISSING

| VARIABLE NOTES: F5038_3

| This variable classifies on what basis seats in the first
 | electoral tier in the lower house are allocated on. Tiers are
 | conventional in PR-list and Mixed Member Systems and are a means
 | of allocating seats depending on different criteria.
 | CSES has harmonized individual polity approaches to a broad
 | comparative classification standard based on responses from
 | national Collaborators. Users are advised to consult ELECTION
 | STUDY NOTES below for more information.

| Source of data: CSES Macro Report M15a & M15b.

| ELECTION STUDY NOTES - SLOVAKIA (2023): F5038_3

| Slovakia uses a proportional electoral system with a single
 | nationwide constituency. The National Council's 150 seats are
 | allocated using the largest remainder method with Hagenbach-
 | Bischoff quota, a variant of the D'Hondt method. Party lists
 | are semi-closed, with voters being allowed to cast up to four
 | preferential votes for candidates of their preferred party.

| ELECTION STUDY NOTES - SWITZERLAND (2023): F5038_3

| There are 26 cantons in Switzerland which essentially function
 | as electoral districts and primarily are multi-member electoral
 | districts (for example, the canton of Zurich had 36 seats in
 | 2023; the canton of Geneva seven seats). However, a minority
 | of cantons have only one seat (e.g., in 2023 the cantons of
 | Glarus, Uri, Obwalden).

 F5038_4 >>> ELECTORAL TIER - LOWER HOUSE - 2ND SEGMENT (TIER) -
 CLASSIFICATION OF BASIS ON WHICH SEATS ARE ALLOCATED

The second electoral tier for lower house elections is based on ...

- 0. MIXED MEMBER - PARTY LIST VOTE: NATIONAL
- 1. MIXED MEMBER - PARTY LIST VOTE: REGIONAL/LOCAL DISTRICTS
OR SUBNATIONAL GEOGRAPHIC AREAS
- 2. PR LIST - SUPPLEMENTARY SEATS TO ENSURE PROPORTIONALITY
- 3. PR LIST - NATIONWIDE DISTRICT
- 4. OTHER - SEE ELECTION STUDY NOTES
- 7. NOT APPLICABLE
- 9. MISSING

VARIABLE NOTES: F5038_4

This variable classifies on what basis seats in the second electoral tier in the lower house are allocated on. Tiers are conventional in PR-list and Mixed Member Systems and are a means of allocating seats depending on different criteria. CSES has harmonized individual polity approaches to a broad comparative classification standard based on responses from national Collaborators. Users are advised to consult ELECTION STUDY NOTES below for more information. In the few instances where a polity operates three tiers, details of Tier 3 are listed below in the ELECTION STUDY NOTES.

Source of data: CSES Macro Report M15a & M15b.

ELECTION STUDY NOTES - AUSTRIA (2024): F5038_4

Austria has three tiers in total. Its second tier sees votes and seats not allocated in the 39 local constituencies in tier 1 pooled in the nine state constituencies (Landeswahlkreise) and redistributed to improve proportionality to the vote within each of the nine lands. A total of 59 mandates are allocated at this tier. A third tier at the Federal level (Bundeswahlkreis), performs a correction function, where the remaining 32 mandates are distributed so that parties' total seats match their nationwide vote shares. Thus, tier 2 is an intermediate aggregation mechanism, while tier 3 is the final national proportionality correction.

ELECTION STUDY NOTES - SWEDEN (2022): F5038_4

The Swedish Riksdag has 349 members, where 310 members are elected from 29 multi-member constituencies. Additionally, 39 supplementary seats are distributed in order to achieve full proportionality which are equivalent to a second tier and are treated as such by CSES.

 F5039_L >>> LINKED ELECTORAL SEGMENTS (TIERS)

Whether countries with multiple segments (tiers) have linked
 (connected) or unlinked (unconnected) segments (tiers).

-
- 0. NO
 - 1. YES
 - 2. [SEE ELECTION STUDY NOTES]
 - 7. NOT APPLICABLE
 - 9. MISSING

| VARIABLE NOTES: F5039_L

| Definition: Linkage occurs whenever (i) unused votes from one
 | electoral segment (tier) are used at another level or (ii) the
 | allocation of seats in one segment (tier) is conditional on the
 | seats received in another segment (tier).

| The definition of F5039_L is taken from Nils-Christian Bormann
 | and Matt Golder's database about "Democratic Electoral Systems
 | Around the World, 1946-2020" (Version 4.1). Featured in
 | Electoral Studies 78.

| Source of data:

| <http://mattgolder.com/elections>. (Date accessed: May 14, 2024).

| F5039_L primarily concerns the Lower House election. However, if
 | a particular study is focused on the Upper House or Presidential
 | election, it may report results for these elections,
 | respectively.

| Source of data: CSES Macro Report and Publicly Available Sources.

| ELECTION STUDY NOTES - AUSTRIA (2024): E5039_L

| The Austrian electoral tiers are linked because seat allocations
 | at tiers 2 (Land) and 3 (Federal) depend on the outcome of tier
 | 1. Seats won in lower tiers are deducted from a party's total
 | entitlement at higher tiers. Only parties surpassing the
 | nationwide threshold of 4% or winning one seat in tier 1, are
 | eligible for seats in tiers 2 and 3.

 F5039_D >>> DEPENDENT FORMULA IN MIXED SYSTEMS

Whether the two electoral formulas used in a mixed system are

dependent or independent.

.....

- 0. INDEPENDENT
- 1. INDEPENDENT/DEPENDENT
- 2. DEPENDENT
- 7. NOT APPLICABLE
- 9. MISSING

| VARIABLE NOTES: F5039_D

| Definition: A dependent mixed system is one in which the application of one formula is dependent on the outcome produced by the other formula. An independent mixed system is one in which the two electoral formulas are implemented independently of each other.

| The definition of F5039_D is taken from Nils-Christian Bormann and Matt Golder's database about "Democratic Electoral Systems Around the World, 1946-2020" (Version 4.1). Featured in Electoral Studies 78.

| Source of data:
 | <http://mattgolder.com/elections>. (Date accessed: May 14, 2024).

| F5039_D primarily concerns the Lower House election. However, if a particular study is focused on the Upper House or Presidential election, it may report results for these elections, respectively.

| Source of data: CSES Macro Report and Publicly Available Sources.

 F5039_S >>> SUBTYPES OF MIXED ELECTORAL SYSTEMS

Sub-types of mixed electoral systems.

.....

- 1. COEXISTENCE
- 2. SUPERPOSITION
- 3. FUSION
- 4. CORRECTION
- 5. CONDITIONAL
- 6. [SEE ELECTION STUDY NOTES]
- 7. NOT APPLICABLE
- 9. MISSING

=====

| VARIABLE NOTES: F5039_S

| The definition of F5039_S is taken from Nils-Christian Bormann and Matt Golder's database about "Democratic Electoral Systems Around the World, 1946-2020" (Version 4.1). Featured in Electoral Studies 78.

| Source of data:

| <http://mattgolder.com/elections>. (Date accessed: May 14, 2024).

| COEXISTENCE: This is a system in which some districts use a majoritarian formula, while others employ a proportional formula in a single electoral segment (tier). Coexistence systems are independent mixed systems.

| SUPERPOSITION: This is a system in which a majoritarian and proportional formula are applied in independent electoral districts.

| FUSION: This is a system in which majoritarian and proportional formulas are used in an independent manner within a single district.

| CORRECTION: This is a system in which seats distributed by proportional representation in one set of districts are used to correct the distortions created by the majoritarian formula in another. Correction systems are a dependent form of mixed systems.

| CONDITIONAL: This is a system in which the actual use or not of one electoral formula depends on the outcome produced by the other. Conditional systems are a dependent form of mixed systems.

| F5039_S primarily concerns the Lower House election. However, if a particular study is focused on the Upper House or Presidential election, it may report results for these elections, respectively.

| Source of data: Publicly Available Sources.

F5040 >>> NUMBER OF ELECTORAL DISTRICTS - 1ST TIER - LOWER HOUSE

Number of electoral districts/constituencies in the first tier for the lower house elections.

.....

001. [SEE ELECTION STUDY NOTES]

002-900. NUMBER OF ELECTORAL DISTRICTS

999. MISSING

| ELECTION STUDY NOTES - BRAZIL (2022): F5040

| All 513 members of the Chamber of Deputies (federal deputies) are elected from 27 multi-member constituencies corresponding to the states and Federal District, varying in size from eight to 70 seats. The Chamber elections are held using open list proportional representation.

| ELECTION STUDY NOTES - DENMARK (2022): F5040

| Mainland Denmark is divided into three electoral provinces: Copenhagen, Sealand-Southern Denmark, and Northern Jutland. The three provinces are subdivided into a nationwide total of ten multi-member constituencies for mainland Denmark. There is an additional layer below these ten multi-member constituencies - classified as nomination districts which number 92, but which have no importance regarding seat allocation. Rather they influence candidate nomination and electoral administration.

| Source: The Parliamentary Electoral System in Denmark, p. 4-5, available at: https://www.thedanishparliament.dk/-/media/pdf/publikationer/english/the-parliamentary-system-of-denmark_2011.ashx (Date accessed: October 14, 2021).

| ELECTION STUDY NOTES - MONTENEGRO (2023): F5040

| Montenegro has a single electoral constituency, with the country operating as a nationwide district.

| ELECTION STUDY NOTES - NEW ZEALAND (2023): F5040

| Officially, there are 72 electoral constituencies at tier 1 (although this can alter if there are overhang seats - SEE ELECTION STUDY NOTES - NEW ZEALAND (2023): F5011_4 for more), made up of 65 constituencies representing the general population and seven Maori constituencies.

| The latter provide special representation to New Zealand's Maori community. Maori electorates were introduced in 1867 and operate in the same way as general constituencies, but include Maori electors who have decided to place their name on the Maori electoral roll rather than the general electoral roll.

| New Zealand adjusts the number and boundaries of its electorates after each census and electoral population review to ensure roughly equal population representation.

| ELECTION STUDY NOTES - PORTUGAL (2022 & 2024): F5040

| Portugal has 22 electoral districts in total: 18 in mainland Portugal plus four other constituencies covering the overseas (split into two, depending on whether they reside in Europe or outside Europe) and two remaining districts for the overseas territories of Madeira and the Azores.

| ELECTION STUDY NOTES - SLOVAKIA (2023): F5040

| Slovakia has a single electoral constituency with the country
| operating as a nationwide district.

| ELECTION STUDY NOTES - SLOVENIA (2022): F5040

| The National Assembly is composed of deputies of the citizens of
| Slovenia and comprises 90 deputies. Deputies are elected by
| universal, equal, direct and secret voting, in eight electoral
| units (constituencies, eleven deputies are elected in each
| electoral unit). 88 National Assembly deputies are elected
| according to the proportional system, using the Droop quotient.
| Two deputies of the Italian and Hungarian national communities
| are elected according to the majority system.

| ELECTION STUDY NOTES - SWEDEN (2022): F5040

| In the first tier, there are 29 multi-member districts, electing
| 310 representatives in total.

| ELECTION STUDY NOTES - TAIWAN (2024): F5040

| Taiwan's Parliament (The Legislative Yuan) has 113 members. The
| seats are distributed via two segments (tiers). The first segment
| is represented by 73 seats, elected in single-member districts
| (SMD). The second segment is a nationwide district employing a
| proportional representation system. In addition, six seats are
| reserved for aboriginal groups.

F5041 >>> AVERAGE DISTRICT MAGNITUDE - 1ST TIER - LOWER HOUSE

Average district magnitude in the first tier for the lower house
elections.

001.00-900.00 NUMBER OF SEATS ELECTED PER DISTRICT

999. MISSING

| VARIABLE NOTES: F5041

| F5041 details the average district magnitude in the first tier,
| calculated as the total number of seats allocated in the lowest
| segment (tier) divided by the total number of districts in that
| segment (tier).

| Source of data: CSES Macro Report and Publicly Available Sources.

| ELECTION STUDY NOTES - AUSTRIA (2024): F5041

|
 | 92 mandates are allocated across 39 local constituencies to
 | ensure local anchoring in representation.
 |
 | ELECTION STUDY NOTES - DENMARK (2022): F5041
 |
 | These data represent the average district magnitude of districts
 | in mainland Denmark only (175 seats in total; of which 135
 | are contested at the lowest tier).

 F5042 >>> ELECTORAL FORMULA - 1ST TIER - LOWER HOUSE

The precise electoral formula used in the first electoral tier
 for lower house elections.

| VARIABLE NOTES: F5042
 |
 | Source of data: CSES Macro Report and Publicly Available Sources.
 |
 | ELECTION STUDY NOTES - AUSTRALIA (2022): F5042
 |
 | According to Parline: "Voters are required to express a
 | preference among all the candidates contesting the same seat.
 | A candidate is elected if he/she gains an absolute majority or
 | 50% + one vote. If none of the candidates in a division obtains
 | an absolute majority of the first preference votes, a second
 | round of counting is held. At this point, the candidate with the
 | least number of votes is eliminated and the votes which he/she
 | obtained in the first round are redistributed among the
 | remaining candidates on the basis of the electors' second
 | choices. This procedure is repeated until such time as one of

| the candidates obtains an absolute majority."

| ELECTION STUDY NOTES - SLOVAKIA (2023): F5042

| Slovakia uses the Hagenbach-Bischoff method to distribute seats,
 | a variant of the D'Hondt system. An electoral quota is
 | calculated by dividing the total number of valid votes won
 | by lists eligible for seats by the number of seats on offer plus
 | one (i.e., $150+1=151$). The number of votes polled by each party
 | that surpasses the threshold is divided by the quota
 | (with any fractional remainder disregarded), and this gives
 | the number of seats each party is entitled to. Any seats that
 | remain unallocated after the application of this procedure
 | are distributed according to the largest remainder method.

| Source of data: <http://www.electionresources.org/sk/>
 | (Date accessed: February 09, 2017).

| ELECTION STUDY NOTES - SWEDEN (2022): F5042

| Modified St-Lague method. "The permanent constituency seats
 | are distributed on the basis of the total number of votes gained
 | by the political parties in each constituency. Comparative
 | numbers are calculated for the parties that will take part in
 | the distribution of seats. The first comparative number is
 | obtained by dividing the parties' respective total number of
 | votes by 1.4. The party which receives the highest comparative
 | number is awarded the first seat in the constituency. That party
 | is then allocated a new comparative number, obtained by dividing
 | the party's votes by 3. The other parties keep their comparative
 | numbers until they are awarded a seat. When a party obtains its
 | second seat, its votes are divided by 5 to calculate the next
 | comparative number. For the third seat by 7 etc. This method of
 | calculation is referred to as the 'adjusted odd-number method'."

.....

000-900. NUMBER OF SEATS ABOVE 1ST TIER

998. NOT ASCERTAINABLE

999. MISSING

| VARIABLE NOTES: F5049

| F5049 may include seats allocated in several different upper segments (tiers).

| For mixed-member proportional (MMP) systems, the theoretical value of the number of seats above tier 1, as conventionally specified by electoral law is classified by CSES. In elections where overhang or compensatory seats arise and adjust the size of the legislature ex-post election outcomes, the actual number of seats above the first tier differs from this theoretical value. As these variations are election-specific, do not reflect a change in the institutional tier structure and represent the electoral systems original design parameter, CSES records the theoretical tier size in the variable. Any deviations to this value are noted in ELECTION STUDY NOTES below.

| Source of data: CSES Macro Report and Publicly Available Sources.

| ELECTION STUDY NOTES - AUSTRIA (2024): F5049

| The number of seats above the first tier for the 2024 elections was 91 - 59 allocated at tier 2 and 32 allocated at tier 3. This number can vary between elections as the number of seats allocated to each Land depends on population size and electoral results.

| ELECTION STUDY NOTES - NEW ZEALAND (2023): F5049

| The number of seats allocated in the second tier can change depending on whether compensatory seats are allotted or not. Without compensatory seats, the number of seats is 48, which is the value the CSES data reflects. Three compensatory seats were allocated in tier 2 in the 2023 election. With these three compensatory seats included, the number of seats above the first tier is 51.

| ELECTION STUDY NOTES - SLOVENIA (2022): F5049 & F5050

| Slovenia uses a two-tier allocation procedure: seats are first allocated via Droop quota within eight constituencies, and any unallocated seats are subsequently allocated at the national level. However, the exact distribution of seats between the first (constituency-level) tier and the second (national) tier for 2022 cannot be ascertained from publicly available official sources with no breakdown of seats by tier available.

| ELECTION STUDY NOTES - TAIWAN (2024): F5049

| Taiwan's Parliament (The Legislative Yuan) has 113 members. The seats are distributed via two segments (tiers). M15a. How many votes do voters cast or can cast?

.....

01-90. NUMBER OF VOTES

91. OTHER [SEE ELECTION STUDY NOTES]

97. NOT APPLICABLE

99. MISSING

VARIABLE NOTES: F5051_

In some polities, voters do not cast a separate or direct vote for the second (or subsequent) tiers. Instead, seat allocation at these levels is derived from the votes cast in the first tier. These instances are conventionally accompanied by an ELECTION STUDY NOTE to explain how CSES classifies these systems.

Source of data: CSES Macro Report M15a.

ELECTION STUDY NOTES - AUSTRALIA (2022): F5051_1

For lower house elections, Australia employs the Alternative Vote system. In this system, voters are required to list their preferences for as many candidates as there are on the ballot. Thus, while the number of votes cast is one, the number of preferences expressed varies across electoral districts.

ELECTION STUDY NOTES - AUSTRALIA (2022): F5051_3

For upper house elections, Australia employs a single-transferable-vote form of proportional representation. In this system each voter indicates the order of preference among all the candidates competing in her district, or alternatively, she can indicate support for a party ticket (which determines the order of preference of candidates within the party).

For details: http://www.ipu.org/parline-e/reports/2015_B.htm
 (Date accessed: December 10, 2024).

ELECTION STUDY NOTES - AUSTRIA (2024): F5051_2

The Austrian National Council has 183 members who are elected across three electoral tiers. Voters cast only one vote, which is first counted at tier 1 (local level - Regionalwahlkreise). At tier 2 and 3, there is no additional ballot but unallocated votes from the tier 1 are aggregated and redistributed within each Land to improve proportionality between vote share and seat share in the Land. In Tier 3, proportionality between vote share and seat share at the Federal level is ensured. While voters do not cast a ballot directly for this tier or Tier 3, it is widely acknowledged to constitute two separate tiers of the electoral system.

Although the second and third tiers do not correspond to a distinct ballot or separate vote, they play an integral and legally defined role in the aggregation and allocation of mandates between the regional and federal levels.

ELECTION STUDY NOTES - BRAZIL (2022): F5051_3

Members of the Brazilian Senate (Senado Federal) are elected

| for an eight-year term, and the chamber is composed of 81
| members, with each state in Brazil having three Senators each.
| Members are elected in alternative electoral cycles: two-thirds
| of the Senate seats (n=54) are contested in one election cycle
| while the remaining one-third are contested in the other. The
| 2022 elections saw one-third of the Senate seats contested.
| Accordingly, voters therefore had one vote in this election, as
| one Senator was being elected per state.

| ELECTION STUDY NOTES - DENMARK (2022): F5051_1 & F5051_2

| The Danish Folketing has 179 members, 175 of whom are elected
| in mainland Denmark and the remaining four from the territories
| of Greenland and the Faroe Islands. In mainland Denmark, 135
| members are elected from 10 multi-member constituencies across
| three geographical regions, namely: Copenhagen, Northern Jutland,
| and Seeland-Southern Denmark. Additionally, 40 supplementary
| seats are distributed across these three geographical regions
| in order to achieve full proportionality. While voters do not
| cast a ballot directly for this tier, it is widely acknowledged
| to constitute a separate tier of the electoral system.

| ELECTION STUDY NOTES - FRANCE (2022): F5051_1

| The French 2022 election study is devoted to the Presidential
| election. Here, we present data concerning the Lower House
| (National Assembly - Assemblée nationale) electoral system.
| The Upper House of the French parliament (the Senate - Senat)
| is indirectly elected.

| ELECTION STUDY NOTES - NEW ZEALAND (2023): F5051_1 & F5051_2

| In elections in New Zealand, each voter has two votes, one in
| each segment: One vote ("first vote") for an individual candidate
| in one of the electoral constituencies (tier 1), and another
| vote ("second vote") for a national party-list drawn up by each
| political party (tier 2).

| ELECTION STUDY NOTES - SLOVENIA (2022): F5051_2

| National Assembly deputies are elected according to the
| proportional system, using the Droop quotient in eight electoral
| constituencies. The nationwide threshold for entering the
| parliament is 4% of the total vote. The second tier is
| represented by those seats that remain unallocated on the bases
| of election results in primary constituencies.
| Since voters cast a single vote only, this system is different
| from systems with multiple tiers where voters vote separately
| in different tiers. Hence, the system is coded as consisting of
| a single tier in variables F5051-F5060.

| ELECTION STUDY NOTES - SLOVENIA (2022): F5051_3

| Slovenia is considered to be a case of incomplete bicameralism.

| The National Council could be regarded as the Upper House. It is
 | supposed to be representative of social, economic, professional
 | and local interest groups in Slovenia. However, since it is not
 | only indirectly elected, but also does not pass laws itself,
 | variables F5051-F5060 that refer to the upper house are coded as
 | 'Not applicable'.

| ELECTION STUDY NOTES - SWEDEN (2022): F5051_1 & F5051_2

| The Swedish Riksdag has 349 members, where 310 members are
 | elected from 29 multi-member constituencies. Additionally,
 | 39 supplementary seats are distributed in order to achieve full
 | proportionality, which are equivalent to a second tier. While
 | voters do not cast a ballot directly for this tier, it is widely
 | acknowledged to constitute a separate tier of the electoral
 | system.

| ELECTION STUDY NOTES - SWITZERLAND (2023): F5051_1 & F5051_3

| In Switzerland, voters have as many votes as the number of seats
 | in their canton, which serve as electoral districts (for the 2023
 | elections cantons had between 1 and 36 seats). Voters can choose
 | one of the parties on the party lists, or they can create their
 | own list by filling an empty list on the ballot with the
 | candidates they prefer. Additionally, they can modify the party
 | (e.g., add candidates from other parties instead of candidates
 | of the list, a system called panachage), delete candidates or
 | vote twice for the same candidate (cumulation).
 | If a voter casts fewer votes than seats in the district, the
 | remaining votes go to the party indicated on the list. If no
 | party is indicated, the remaining votes are lost. Since all
 | candidates belong to a party, if a voter casts a single vote for
 | a candidate, that vote automatically counts for that candidate's
 | party list.

 F5052_1 >>> VOTING PROCEDURE - 1ST TIER - LOWER HOUSE
 F5052_2 >>> VOTING PROCEDURE - 2ND TIER - LOWER HOUSE
 F5052_3 >>> VOTING PROCEDURE - 1ST TIER - UPPER HOUSE

M15b. Do they vote for candidates (not party lists) or party
 lists?

.....

- 0. CANDIDATES
- 1. PARTY LISTS
- 2. PARTY BLOC VOTING
- 3. OTHER [SEE ELECTION STUDY NOTES]
- 7. NOT APPLICABLE

9. MISSING

| VARIABLE NOTES: F5052_

| Definition: Party bloc voting is used in multi-member districts where voters cast a single party-centered vote for their party of choice; the party with the most votes wins all of the district seats.

| Source of data: CSES Macro Report M15b.

| ELECTION STUDY NOTES - AUSTRALIA (2022): F5052_1

| Voting is by the full preferential system (also known as instant-runoff system), where voters rank the candidates in order of preference rather than vote for a single candidate.

| ELECTION STUDY NOTES - AUSTRALIA (2022): F5052_3

| Senators are popularly elected under a single transferable vote system, where voters have as many votes as there are candidates in a district. Voters can also vote for an individual party ('group voting ticket').

| ELECTION STUDY NOTES - AUSTRIA (2024): F5052_1

| Voters cast one vote at tier 1 and may also give a preferential vote to individual candidates on the party lists. In theory, these preferential votes can reorder the list of the candidates but the required thresholds for altering the lists are high, somewhat limiting the openness of the list system. Furthermore, in Austria, voters only cast one ballot at tier 1. Compensatory seats at tiers 2 and 3, respectively, are allocated based on the ballots cast in tier 1. Thus, voters do not cast a separate ballot for tiers 2 or 3.

| ELECTION STUDY NOTES - BRAZIL (2022): F5052_1

| For Federal deputy elections, each political party presents a list of candidates. Voters can vote for only one candidate or can vote for the party.

| ELECTION STUDY NOTES - DENMARK (2022): F5052_1

| Voters can choose to endorse a party, a candidate on a party list, or an independent candidate. Parties can choose to have either an open or a party-ranked list of candidates. If the list is open, votes that are cast for the party (the voter has not given a personal vote) are distributed between the candidates based on the number of personal votes. If the list is party ranked, a vote cast for the party will be given to the candidate listed first on the list until he or she has received

| enough votes to be elected, and so on.
 | In Denmark, voters only cast one ballot at tier 1. Compensatory
 | seats at tier 2 are allocated based on the ballots cast in
 | tier 1. Thus, voters do not cast a separate ballot for tier 2.

| ELECTION STUDY NOTES - SLOVAKIA (2023): F5052_1

| Voting is by proportional representation with open party lists
 | in a single nationwide constituency. Voters cast their ballot
 | for one party list, but they may also indicate up to four
 | preferential votes for individual candidates on that party's
 | list. These preferential votes can influence which candidates
 | from the party list are elected, provided the candidates receive
 | at least 3% of the party's total votes.

| ELECTION STUDY NOTES - SWEDEN (2022): F5052_1

| In Sweden, voters only cast one ballot at tier 1. Compensatory
 | seats at tier 2 are allocated based on the ballots cast in
 | tier 1. Thus, voters do not cast a separate ballot for tiers 2
 | or 3.

| ELECTION STUDY NOTES - SWITZERLAND (2023): F5052_1

| In Switzerland, voters have a great degree of choice as to
 | whether they vote for a party list or a particular candidate with
 | an open-list proportional representation system used for the
 | National Council.
 | They may use a pre-printed party list ballot paper. On this,
 | voters can change pre-printed lists by deleting, adding or
 | repeating candidate names (split-ticket and cumulative voting,
 | respectively). Alternatively, they can complete a blank ballot
 | paper where the number of lines on the ballot paper corresponds
 | to the number of seats in the canton, which can be filled in with
 | the names of candidates contesting. If they complete a blank
 | ballot paper, they can write a party name at the top and then add
 | candidate names. Any empty lines on the ballot count only if a
 | party name is written; otherwise, they are not counted. Rules may
 | vary slightly between cantons.

| ELECTION STUDY NOTES - SWITZERLAND (2023): F5052_3

| Elections to the Council of State are governed by laws at canton
 | level. Candidates are generally chosen by absolute majority vote.
 | An exception is the canton of Jura, which uses a PR system to
 | elect its two seats.

M15c. How many rounds of voting are there?

.....

01-90. NUMBER OF ROUNDS

97. NOT APPLICABLE

99. MISSING

| VARIABLE NOTES: F5053_

| Source of data: CSES Macro Report M15c.

| ELECTION STUDY NOTES - UNITED STATES (2024): F5053_

| For the Presidential elections, there is only one round of
| voting. In most states, for Congressional elections (to the House
| of Representatives and the Senate), there is also one round of
| voting. The exceptions are for House and Senate elections in
| Georgia and Louisiana.

| In the state of Georgia, winning candidates for all congressional
| offices must win 50% of the popular vote. Failure to do so
| results in a run-off election with the two most popular
| candidates in vote share from the original election advancing to
| the run-off contest.

| In the state of Louisiana, a "jungle primary" has been used since
| 1977. If one candidate obtains a majority of the vote, they win
| the office they are seeking outright, the only "primary" where
| a candidate can actually achieve this without a run-off.
| When a candidate does not win a majority of the vote, the top
| two candidates in vote share, irrespective of party, go forward
| to a run-off election, usually held one month later.

| No Congressional or Senate elections in 2024 required a run-off.

| VARIABLE NOTES: F5055_

| Definition: In systems with preferential voting, a voter can

| express a list of preferences. For example, votes can be cast
 | by putting a '1' in the column next to the voter's preferred
 | candidate, a '2' beside their second favorite candidate and
 | so on. Votes are counted according to the first preferences and
 | any candidates who have achieved the predetermined quota are
 | elected. To decide which of the remaining candidates are elected
 | the votes are transferred from candidates who have more than the
 | necessary number to achieve the quota and from the candidate with
 | the least number of votes. An example of this is the election in
 | Ireland in 2002.

| Definition: Voting is compulsory if the law states that all those
 | who have the right to vote are obliged to exercise that right.

| Source of data: CSES Macro Report M18.

| ELECTION STUDY NOTES - BRAZIL (2022): F5057_1 & F5057_2

| Voting is compulsory for those aged 18-70 unless they are
 | illiterate. Voting is optional for the illiterate, those over
 | 70, and those aged 16-18. Those who do fail to vote must provide
 | a justification to the Brazilian Election Commission.
 | The Electoral Code also defines the civil penalties that eligible
 | voters face for failing to vote. In addition to paying a fine of
 | 3.51 Brazilian reals (BRL) or 0.68 USD, eligible Brazilians who
 | fail to vote are barred from receiving a new or replacement
 | passport or public sector salaries, competing for public sector
 | jobs, registering at public universities, or running for public
 | office, among other penalties, until paying the fine.

VARIABLE NOTES: F5058_
 Source of data: CSES Macro Report M20a.
 Further details on the size of the threshold(s), if applicable, are provided in ELECTION STUDY NOTES for variables F5059_ (Party Threshold).

ELECTION STUDY NOTES - DENMARK (2022): F5058_2
 The electoral threshold in Denmark only applies to the compensatory seats (n=40 at second tier). Only parties receiving at least 2% of the total vote are entitled to receive one of the 40 seats to be allocated. Alternatively, parties winning a seat directly in any of the ten multi-member constituencies or who obtain a number of votes corresponding at least to the provincial votes/seat ratio in two of the three geographical regions (i.e., Copenhagen, Northern Jutland, and Seeland-Southern Denmark), are also entitled to compensatory seats.

ELECTION STUDY NOTES - POLAND (2023): F5058_1
 The threshold is 5% (8% for electoral alliances) of the valid votes cast nationwide.

ELECTION STUDY NOTES - SLOVAKIA (2023): F5058_1
 The threshold for political parties to obtain seats is 5% of the valid votes. However, it is higher for electoral alliances comprising more parties:
 - A threshold of 7% of valid votes for coalitions of two or three parties.
 - A threshold of 10% of valid votes for coalitions of four parties or more.

| See also VARIABLE NOTES for F5058_.

| ELECTION STUDY NOTES - AUSTRIA (2024): F5059_1

| A party can win a seat at Tier 1 by reaching the Hare quota (total valid votes in the district divided by the number of seats in the district). It does not have to clear the 4% national threshold, which applies only at Tiers 2 and 3, respectively. Winning at least one mandate at Tier 1 (a Grundmandat) exempts a party from the 4% requirement altogether, although in practice no party has entered parliament solely through this exemption since World War II.

| ELECTION STUDY NOTES - AUSTRIA (2024): F5059_2

| Parties must win at least 4% of the national vote to be eligible for seat allocation at Tiers 2 and 3. However, a party that secures at least one mandate at Tier 1 (Grundmandat) is exempt from the 4% threshold requirement. In practice, no party has entered parliament solely via this Grundmandat exemption since World War II.

| ELECTION STUDY NOTES - BRAZIL (2022): F5059_1

| The threshold is based on the Hare Quota. To win seats, a party must exceed the quota (total valid votes divided by the number of seats) in each electoral district. Each party is entitled to as many seats as the number of times its vote reaches the quota. Unallocated seats are apportioned according to the d'Hondt formula.

| ELECTION STUDY NOTES - BRAZIL (2022): F5059_3

| The Senate is chosen by simple majority.

| ELECTION STUDY NOTES - NEW ZEALAND (2023): F5059_2

| New Zealand has a double threshold: Parties with more than 5% of the valid votes nationally on the basis of the party list votes ("second vote", tier 2) or those who have won one of the 72 constituency seats (tier 1) are entitled to sit in parliament and may be eligible to receive a proportional share of the 48 list

| seats (or more if there are overhang seats) on the basis of their
 | national vote share.

| ELECTION STUDY NOTES - POLAND (2023): F5059_1

| The threshold is 5% (8% for electoral alliances) of the valid
 | votes cast nationwide.

| ELECTION STUDY NOTES - SLOVAKIA (2023): F5059_1

| The threshold for political parties to obtain seats is 5% of the
 | valid votes. However, it is higher for electoral alliances
 | comprising more parties:

- | - A threshold of 7% of valid votes for coalitions
 | of two or three parties.
- | - A threshold of 10% of valid votes for coalitions
 | of four parties or more.

| ELECTION STUDY NOTES - SWEDEN (2022): F5059_1

| Sweden's electoral system applies two distinct thresholds for
 | parliamentary representation and eligibility for seats at tier 1.
 | A party must normally obtain at least 4% of the national vote to
 | qualify for seat allocation in the national adjustment tier
 | (Tier 2). However, a party that fails to meet this national
 | threshold may still gain representation in a constituency (Tier
 | 1) if it receives at least 12% of the valid votes in that
 | constituency.

| ELECTION STUDY NOTES - SWEDEN (2022): F5059_2

| A party must normally obtain at least 4% of the national vote to
 | qualify for seat allocation in the national adjustment tier
 | (Tier 2).

| ELECTION STUDY NOTES - TURKIYE (2023): F5059_1

| On March 31, 2022, the Turkish parliament amended the election
 | law, lowering the election threshold for political parties
 | from 10% to 7% of valid votes.

| ELECTION STUDY NOTES - UNITED STATES (2024): F5059_3

| For elections to the United States Senate, in most states, there
 | is no formal threshold to win the seat with the plurality rule -
 | the candidate with the most votes wins, regardless of whether
 | they achieve an absolute majority, emerging as winner.
 | Two states, Georgia and Louisiana, apply majority requirements
 | with run-off election provisions. If no candidate achieves a
 | majority, the top two candidates proceed to a run-off election.
 | In Louisiana, all candidates compete in a nonpartisan "jungle
 | primary". If a candidate wins over 50% in this first round, they
 | are elected. Otherwise, the top two candidates - regardless of
 | party - advance to a run-off.

| In Maine and Alaska, the alternative vote (AV, sometimes referred
| to as ranked choice voting) electoral system is used, which
| produces a majority winner through distribution of lower
| preference votes.

- 027. Cost of living
- 028. Economic management
- 029. Health
- 030. Education
- 031. Environment

ELECTION STUDY NOTES - AUSTRIA (2024): F5061

A detailed description of the most salient factors in the election as perceived by the Collaborators were:

- 065. Migration and asylum
- 066. Inflation
- 067. Healthcare
- 068. Environmental protection & climate change
- 069. Security & crime

ELECTION STUDY NOTES - BRAZIL (2022): F5061

A description of the most salient factors in the election is included here:

- 011. The conduction of the pandemic by Jair Bolsonaro was a major factor in his defeat. In a country that has a specialized program for vaccination throughout the

country and a high rate of adherence to vaccines, Bolsonaro chose to deny the seriousness of the COVID-19 virus, encouraged people to return to their daily activities and neglected the purchase of vaccines. Thus, in addition to the various statements contrary to scientific guidelines, the President delayed the country's vaccination. The pandemic caused 800,000 deaths in the country. The evaluation of his government was particularly affected during the period. There is also the impact of the pandemic on the country's economic performance. The country did not do well in the first year of Bolsonaro's government and, under the pandemic, the economic rates only got worse. At the end of his administration, the Bolsonaro government had the second worst average annual GDP growth since Fernando Henrique Cardoso in 1995: 1.4%.

012. After being arrested and therefore prevented from disputing the 2018 elections, former President Luis Inacio Lula da Silva (Lula) had criminal convictions against him annulled, teeing up a Presidential run against current President Jair Bolsonaro in 2022. Lula, who was leading the voter intention as early as 2018, returned to prominence in the Presidential elections four years after his arrest. In a candidacy that brought together several parties and experienced politicians, Lula and the Workers' Party defined an alliance strategy with sectors of the center, and the candidacy of one of the main leaders of the Social Democracy Party constituted his candidacy as vice-President, softening the still present image of Lula as a radical left politician. Lula was joined by Geraldo Alckmin, his former PSDB competitor, as vice-President.
013. Jair Bolsonaro's constant attacks on the Supreme Court eroded the image of the then-President. Bolsonaro frequently threatened Brazilian democracy, expressing his non-acceptance of the election result if defeated and raising the possibility of a coup d'etat. Brazil was even considered by V-Dem to be one of the countries that most advanced towards an autocracy under the Bolsonaro government.
014. In this sense, Bolsonaro also encouraged distrust of the fairness of the elections. Since his first victory as President in 2018, the politician has accused fraud via electronic ballot boxes for the results. The dissemination of false information, such as this one about electronic ballot boxes, was one of the incentives for the Supreme Court to enter an alliance with WhatsApp to combat fake news during Brazilian elections. The speeches clearly had consequences: the director of the Federal Highway Police (PRF) commanded actions, mainly in the Northeast (the Workers' Party's main electoral stronghold), so that

buses with voters did not arrive at the polling station. After Lula's victory, hundreds of highways were closed by protests against the result of the polls. During the election, Bolsonaro made serious threats to the Electoral Court and the minister of justice and called for popular unrest. Many analyses compare Bolsonaro's attitudes with Trump's attitudes in the USA. It is worth mentioning that on January 8, 2023, after Lula's victory, the buildings of the National Congress, the Federal Supreme Court, and the Executive Branch were invaded and vandalized, demonstrating the serious threat to democracy from the Bolsonaro bases.

015. The "anti-establishment" movement, which basically brought new political actors to the elections, lost its strength. The coalition elected with Lula was a strong response to the movement that Bolsonaro is part of. The Workers' Party candidacy attracted several political elites from different ideological spectra to support Lula and thus brought resistance to Jair Bolsonaro's candidacy, seen as a threat to the democratic regime.

- | 053. Economic situation
- | 054. Ethnic relations

| ELECTION STUDY NOTES - POLAND (2023): F5061

| A description of the most salient factors in the election is
 | included here:

- | 040. Erosion of Constitutional Democracy and Rule of Law.
 | The campaign was framed as a struggle for the preservation
 | of constitutional democracy in Poland, with the ruling
 | Law and Justice (PiS) party accused of undermining
 | democratic norms and the rule of law. Key violations,
 | including the undermining of judicial independence and
 | the politicization of key state institutions, were pivotal
 | in mobilizing opposition support. Large-scale protests,
 | notably the "Great March for Democracy" on June 4, 2023
 | underscored widespread concerns about democratic
 | backsliding and influenced public opinion leading up to
 | the elections.
- | 041. Misuse of State Resources and Media Bias.
 | The PiS party's use of state resources for campaigning
 | was a major issue. The party's control over state media
 | led to accusations of biased media coverage, which favored
 | PiS messaging and undermined opposition platforms. The
 | overlap between government-led information campaigns and
 | PiS's electoral messaging skewed the playing field,
 | granting PiS an undue advantage. This influenced voter
 | perception, particularly in rural areas and among older
 | voters who were less likely to engage with independent
 | media.
- | 042. Polarizing Campaign and Divisive Rhetoric.

The electoral campaign in 2023 was notably polarized, with heightened emotional and ideological divisions between the ruling PiS party and the opposition. Issues such as abortion rights, LGBTQ+ rights, and media freedoms were key flashpoints. The PiS's rhetoric targeted opposition leaders and framed the election as a fight for the nation's moral and cultural values. This divisive approach both motivated PiS supporters and galvanized opposition groups, particularly younger and more liberal voters. The LGBTIQ-free zones and the abortion ruling served as rallying points for protests and as significant issues during the campaign.

043. Economic Challenges and Social Inequality.

While the PiS implemented a range of social welfare programs, the economic situation in Poland, especially rising inflation and its disproportionate impact on certain demographic groups (e.g., pensioners and rural populations), contributed to significant discontent. The inflation rate had reached a peak of 18.4%, which impacted the purchasing power of Polish citizens. Moreover, growing social inequality, including pension disparities, became a key issue for those negatively affected by economic policies. Despite economic growth, the inability to address these disparities led to the perception that the government was not adequately supporting vulnerable populations.

044. Geopolitical Context and Refugee Crisis.

The geopolitical context, particularly Poland's role as a frontline state in the Ukraine war and its support for Ukrainian refugees, was a significant issue during the election. Poland hosted millions of Ukrainian refugees, which influenced domestic policies and public sentiment. The PiS government's handling of this crisis, including its decision to accept refugees, was both praised and criticized. While some saw this as a humanitarian success, others viewed it as a strain on Poland's resources. Additionally, PiS's continued confrontations with the European Union over issues related to the rule of law and democratic standards negatively impacted Poland's international standing.

 F5068_1 >>> V-Dem ELECTORAL DEMOCRACY INDEX - TIME T

V-Dem's Electoral Democracy Index in the year of the election.

0-1.00 V-Dem Electoral Democracy Index Score

9.00 MISSING

| VARIABLE NOTES: F5068_1

| F5068_1 details the Varieties of Democracy (V-Dem) project's Electoral Democracy Index in a polity in the election year. This is a composite index comprising expert responses on several indicators related to electoral democracy.

| V-Dem classifies: "The electoral principle of democracy seeks to embody the core value of making rulers responsive to citizens, achieved through electoral competition for the electorate's approval under circumstances when suffrage is extensive; political and civil society organizations can operate freely; elections are clean and not marred by fraud or systematic irregularities; and elections affect the composition of the chief executive of the country. In between elections, there is freedom of expression and an independent media capable of presenting alternative views on matters of political relevance."

| The variable is an interval-level variable running from 0 (Low levels of Electoral Democracy) to 1 (High levels of Electoral Democracy) and is called "v2x_polyarchy" in the V-Dem dataset - available from <https://v-dem.net/> (Date accessed: December 10, 2024).

| More details of the specifics of the Electoral Democracy Index from V-Dem are available in the Codebook - Source of data: Coppedge, Michael, John Gerring, Carl Henrik Knutsen, Staffan I. Lindberg, Jan Teorell, David Altman, Fabio Angiolillo, Michael Bernhard, Cecilia Borella, Agnes Cornell, M. Steven Fish, Linnea Fox, Lisa Gastaldi, Haakon Gjerlow, Adam Glynn, Ana Good God, Sandra Grahn, Allen Hicken, Katrin Kinzelbach, Kyle L. Marquardt, Kelly McMann, Valeriya Mechkova, Anja Neundorf, Pamela Paxton, Daniel Pemstein, Oskar Ryden, Johannes von Romer, Brigitte Seim, Rachel Sigman, Svend-Erik Skaaning, Jeffrey Staton, Aksel Sundstrom, Eitan Tzelgov, Luca Uberti, Yi-ting Wang, Tore Wig, and Daniel Ziblatt, (2024) "V-Dem Codebook v14" Varieties of Democracy (V-Dem); (Date accessed: June 06, 2024).

CSES collects the most up-to-date data for each polity available at the time the data is being processed by the CSES Secretariat. However, aggregate-level macro data from V-Dem can be updated retroactively as revised estimates become available. The CSES policy is to provide users with estimates of data at the time the data is processed. CSES does not retroactively update these estimates as to do so might impede replication.

Data are unavailable for NORTH MACEDONIA (2024), PORTUGAL (2024) and TAIWAN (2024).

F5069_1 >>> V-Dem LIBERAL DEMOCRACY INDEX - TIME T

V-Dem's Liberal Democracy Index in the year of the election.

0-1.00 V-Dem Liberal Democracy Index Score

9.00 MISSING

VARIABLE NOTES: F5069_1

F5069_1 details the Varieties of Democracy (V-Dem) project's Liberal Democracy Index in a polity in the election year. This is a composite index comprising expert responses on several indicators related to liberal democracy.

V-Dem classifies: "The liberal principle of democracy emphasizes the importance of protecting individual and minority rights against the tyranny of the state and the tyranny of the majority. The liberal model takes a 'negative' view of political power insofar as it judges the quality of democracy by the limits placed on government. This is achieved by constitutionally protected civil liberties, strong rule of law, an independent judiciary, and effective checks and balances that, together, limit the exercise of executive power. To make this a measure of liberal democracy, the index also takes the level of electoral democracy into account."

The variable is an interval-level variable running from 0 (Low levels of Liberal Democracy) to 1 (High levels of Liberal Democracy) and is called "v2x_libdem" in the V-Dem dataset - available from <https://v-dem.net/> (Date accessed: December 10, 2024).

More details of the specifics of the Electoral Democracy Index from V-Dem are available in the Codebook - Source of data: Coppedge, Michael, John Gerring, Carl Henrik Knutsen, Staffan I. Lindberg, Jan Teorell, David Altman, Fabio Angiolillo,

Michael Bernhard, Cecilia Borella, Agnes Cornell, M. Steven Fish, Linnea Fox, Lisa Gastaldi, Haakon Gjerlow, Adam Glynn, Ana Good God, Sandra Grahn, Allen Hicken, Katrin Kinzelbach, Kyle L. Marquardt, Kelly McMann, Valeriya Mechkova, Anja Neundorf, Pamela Paxton, Daniel Pemstein, Oskar Ryden, Johannes von Romer, Brigitte Seim, Rachel Sigman, Svend-Erik Skaaning, Jeffrey Staton, Aksel Sundstrom, Eitan Tzelgov, Luca Uberti, Yi-ting Wang, Tore Wig, and Daniel Ziblatt, (2024) "V-Dem Codebook v14" Varieties of Democracy (V-Dem); (Date accessed: June 06, 2024).

CSES collects the most up-to-date data for each polity available at the time the data is being processed by the CSES Secretariat. However, aggregate-level macro data from V-Dem can be updated retroactively as revised estimates become available.

The CSES policy is to provide users with estimates of data at the time the data is processed. CSES does not retroactively update these estimates as to do so might impede replication.

Data are unavailable for NORTH MACEDONIA (2024), PORTUGAL (2024) and TAIWAN (2024).

F5070_1    >>> FREEDOM HOUSE RATING - TIME T
F5070_2    >>> FREEDOM HOUSE RATING - TIME T-1
F5070_3    >>> FREEDOM HOUSE RATING - TIME T-2
-----
```

Freedom House's rating at three time periods (average of the "Political Rights" and "Civil Liberties" scores).

1.00-7.00 FREEDOM SCORE

9.00 MISSING

VARIABLE NOTES: F5070_

F5070_ detail Freedom House's rating of freedom in a country at three time periods: the election year (time T), one year before election (T-1), and two years before election (T-2).

Each country and territory is assigned a numerical rating, on a scale of 1 to 7. A rating of 1 indicates the highest degree of freedom and 7 the least amount of freedom. CSES reports the average of the "Political Rights" and "Civil Liberties" scores.

Source of data: Freedom House's annual publications "Freedom in the World" (<https://freedomhouse.org/report/freedom-world>; (Date accessed: December 02, 2025).

Until 2003, countries whose combined average ratings for Political Rights and for Civil Liberties fell between 1.0 and 2.5 were designated "Free"; between 3.0 and 5.5 "Partly Free",

| and between 5.5 and 7.0 "Not Free". Beginning with the ratings
 | for 2003, countries whose combined average ratings fall between
 | 3.0 and 5.0 are "Partly Free", and those between 5.5 and 7.0 are
 | "Not Free".
 |
 | More information about Freedom House's methodology is available
 | at: <https://freedomhouse.org/> (Date accessed: December 02, 2025).
 |
 | CSES collects the most up-to-date data for each polity available

| CSES collects the most up-to-date data for each polity available
| at the time the data is being processed by the CSES Secretariat.
| However, aggregate-level macro data from the Polity project can
| be updated retroactively as revised estimates become available.
| The CSES policy is to provide users with estimates of data
| at the time the data is processed. CSES does not retroactively
| update these estimates as to do so might impede replication.

| Data for F5071_ are unavailable for MONTENEGRO (2023).

F5072_1 >>> POPULATION, TOTAL (WORLD BANK) - TIME T
F5072_2 >>> POPULATION, TOTAL (WORLD BANK) - TIME T-1
F5072_3 >>> POPULATION, TOTAL (WORLD BANK) - TIME T-2

World Bank estimates of the total population size, at three time
periods.

.....

320,000-1,400,000,000. POPULATION SIZE

9,999,999,999. MISSING

=====

| VARIABLE NOTES: F5072_

| F5072_ detail World Bank estimates of the total population size,
| at three time periods: the election year (time T), one year
| before election (T-1), and two years before election (T-2).

| Definition: Total population is based on the de facto definition
| of population, which counts all residents regardless of legal
| status or citizenship - except for refugees not permanently
| settled in the country of asylum, who are generally considered
| part of the population of their country of origin.

| Source of data: World Bank World Development Indicators Open
| Database: <https://data.worldbank.org/indicator/SP.POP.TOTL>
| (Date accessed: December 02, 2025).

| Users are advised that there is normally a two or three-year
| time lag between these estimates becoming available.
| Consequently, data may not be available at the time of coding.
| In circumstances where this occurs, the polity will be listed
| as DATA UNAVAILABLE in the VARIABLE NOTES below.

| CSES collects the most up-to-date data for each polity available
| at the time the data is being processed by the CSES Secretariat.
| However, aggregate-level macro data from the World Bank is often
| updated retroactively as revised estimates become available.
| These revised estimates are usually because of improved data
| collection, or more evidence becoming available to allow for a
| more robust estimates to be made, or changes in methodology.
| For more, see the advice of the World Bank at:
| <https://datahelpdesk.worldbank.org/knowledgebase/articles/114939-how-are-revisions-managed>
| (Date accessed: April 09, 2019).

| The CSES policy is to provide users with estimates of data
| at the time the data is processed. CSES does not retroactively
| update these estimates as to do so might impede replication.

| Data for F5072_1 are unavailable for MONTENEGRO (2023), NORTH
| MACEDONIA (2024), POLAND (2023), PORTUGAL (2024), and TURKIYE
| (2023).

| Data for F5072_2 are unavailable for NORTH MACEDONIA (2024),
| PORTUGAL (2024), and TAIWAN (2024).

| Data for F5072_3 are unavailable for TAIWAN (2024).

| ELECTION STUDY NOTES - TAIWAN (2024): F5072_1

| The source of these data is the CIA World Factbook

| (Date accessed: July 19, 2025).

F5073 >>> GINI COEFFICIENT OF EQUALIZED DISPOSABLE INCOME -

(YEAR CLOSEST TO ELECTION YEAR AVAILABLE)

The Gini coefficient of equalized disposable income in the year of election or the year closest to election at time of processing.

0.00-100.00 GINI COEFFICIENT

999. MISSING

VARIABLE NOTES: F5073

Definition: F5073 details the World Bank estimate of the distribution of income among individuals or households within an economy and the extent to which it deviates from a perfectly equal distribution. A Lorenz curve plots the cumulative percentages of total income received against the cumulative number of recipients, starting with the poorest individual or household. The Gini index measures the area between the Lorenz curve and a hypothetical line of absolute equality. Thus a Gini index of 0 represents perfect equality, while an index of 100 implies perfect inequality.

Source of data: World Bank World Development Indicators Open Database: <https://data.worldbank.org/indicator/SI.POV.GINI/> (Date accessed: December 02, 2025).

Users are advised that there is normally a two or three-year time lag between these estimates becoming available. Consequently, data may not be available at the time of coding. In circumstances where this occurs, the polity will be listed as DATA UNAVAILABLE in the VARIABLE NOTES below.

CSES collects the most up-to-date data for each polity available at the time the data is being processed by the CSES Secretariat. However, aggregate-level macro data from the World Bank is often updated retroactively as revised estimates become available. These revised estimates are usually because of improved data collection, or more evidence becoming available to allow for a more robust estimates to be made, or changes in methodology. For more, see the advice of the World Bank at: <https://datahelpdesk.worldbank.org/knowledgebase/articles/114939-how-are-revisions-managed> (Date accessed: April 09, 2019).

The time lag for this variable becoming available is often many years. CSES, where possible, has a policy of providing users with the data in the year of the election - the default approach. However, at the time of processing, GINI coefficient data is often unavailable and this can remain the case for several years. To avoid excessive missing values for multiple studies, CSES provides the GINI coefficient estimate for the year closest to

| the election available at the time of data processing. The
| specific years the GINI data refers to for all studies are listed
| in the below table.

| The CSES policy is to provide users with estimates of data
| at the time the data is processed. CSES does not retroactively
| update these estimates as to do so might impede replication.

| The following table gives an overview of the year in which the
| GINI coefficient reported in the data refers to.

| +++ TABLE: GINI COEFFICIENT YEAR OF CALCULATION BY ELECTION STUDY

World Bank estimate of the annual GDP growth at three time periods.
.....

-20.00 to +25.00. PERCENT ANNUAL GROWTH

99. MISSING

VARIABLE NOTES: F5074_

F5074_ report World Bank estimates of the annual GDP growth, at three time periods: the election year (time T), one year before election (T-1), and two years before election (T-2).

Definition: F5074_ details the World Bank estimate of the annual percentage growth rate of GDP at market prices based on constant local currency. Aggregates are based on constant 2015 U.S. dollars. GDP is the sum of gross value added by all resident producers in the economy plus any product taxes and minus any subsidies not included in the value of the products. It is calculated without making deductions for depreciation of fabricated assets or for depletion and degradation of natural resources.

Source of data: World Bank World Development Indicators Open Database: <https://data.worldbank.org/indicator/NY.GDP.MKTP.KD.ZG> (Date accessed: December 02, 2025).

Users are advised that there is normally a two or three-year time lag between these estimates becoming available. Consequently, data may not be available at the time of coding. In circumstances where this occurs, the polity will be listed as DATA UNAVAILABLE in the VARIABLE NOTES below.

CSES collects the most up-to-date data for each polity available at the time the data is being processed by the CSES Secretariat. However, aggregate-level macro data from the World Bank is often updated retroactively as revised estimates become available. These revised estimates are usually because of improved data collection, or more evidence becoming available to allow for a more robust estimates to be made, or changes in methodology. (WORLD BANK) - TIME T-1
F5079_3    >>> UNEMPLOYMENT, TOTAL FOR PEOPLE AGED 15-24 YEARS
(WORLD BANK) - TIME T-2

```

World Bank estimates of the unemployment rate (% of total labor force), at three time periods.

00.00-100.00 UNEMPLOYMENT RATE OF PEOPLE AGED 15-24 YEARS
(% OF TOTAL LABOR FORCE)

999. MISSING

VARIABLE NOTES: F5079_

F5079_ details the World Bank estimate of the unemployment rate (% of total labor force) for people aged 15-24 years at three time periods: the election year (time T), one year before election (T-1), and two years before election (T-2).

Definition: Unemployment is the share of the labor force without work but available for and seeking employment. Definitions of labor force and unemployment may differ by country.

Source of data: World Bank World Development Indicators Open Database: <https://data.worldbank.org/indicator/SL.UEM.1524.ZS> (Date accessed: December 02, 2025).

Users are advised that there is normally a two or three-year time lag between these estimates becoming available. Consequently, data may not be available at the time of coding. In circumstances where this occurs, the polity will be listed as DATA UNAVAILABLE in the VARIABLE NOTES below.

CSES collects the most up-to-date data for each polity available at the time the data is being processed by the CSES Secretariat. However, aggregate-level macro data from the World Bank is often updated retroactively as revised estimates become available. These revised estimates are usually because of improved data collection, or more evidence becoming available to allow for a more robust estimates to be made, or changes in methodology. For more, see the advice of the World Bank at: <https://datahelpdesk.worldbank.org/knowledgebase/articles/114939-how-are-revisions-managed> (Date accessed: April 09, 2019).

The CSES policy is to provide users with estimates of data at the time the data is processed. CSES does not retroactively update these estimates as to do so might impede replication.

| Data for F5079_ are unavailable for TAIWAN (2024).
 | Data for F5079_1 are unavailable for NORTH MACEDONIA (2024) and

World Bank Control of Corruption Index in the given year (F5082_)
and the standard errors (F5082_se) associated with these estimates.

-001.-100. CONTROL OF CORRUPTION INDEX

999. MISSING

| VARIABLE NOTES: F5082_

F5082_ detail the World Bank Control of Corruption Index at three time periods: the election year (time T), one year before election (T-1), and two years before election (T-2).

These data are available in two forms. The first is the estimate in the given year (F5082_1, F5082_2, and F5082_3) and the standard errors (F5082_1se, F5082_2se, and F5082_3se) associated with these estimates.

Definition: Control of Corruption captures perceptions of the extent to which public power is exercised for private gain, including both petty and grand forms of corruption, as well as "capture" of the state by elites and private interests.

Standard error indicates the precision of the estimate of governance. Larger values of the standard error indicate less precise estimates. A 90 percent confidence interval for the governance estimate is given by the estimate +/- 1.64 times the standard error.

Source of data and definitions: World Bank World Development Indicators Open Database:

999,999,999. MISSING

| VARIABLE NOTES: F5089_

| F5089_ details the cumulative N of COVID-19 cases reported to the
 | WHO at a weekend. F5089_ measures this at three time points:
 | the number of cumulative infections reported at the week ending
 | the week before the election (Time T); the number of cumulative
 | infections reported in a polity at the weekend one year before
 | the election date (Time T-1); and the number of cumulative
 | infections reported in a polity at the weekend two years before
 | the election date (Time T-2).

| Definition: A pandemic is an epidemic of infectious disease that
 | has spread across a large region or multiple or worldwide and
 | affecting a substantial number of individuals.
 | At the time of writing, COVID-19 was first discovered in November
 | 2019. However, it is possible human-to-human transmission of the
 | disease was occurring before this discovery. On January 11, 2020
 | the World Health Organization (WHO) was notified by Chinese
 | authorities of a virus outbreak in Wuhan, China. On January 30,
 | 2020, the World Health Organization classified COVID-19 as a
 | Public Health Emergency of Concern before eventually declaring
 | the Health situation as a pandemic on March 11, 2020.

| Definition from WHO:
 | "From the 31 December 2019 to the 21 March 2020, the WHO
 | collected the numbers of confirmed COVID-19 cases and deaths
 | through official communications under the International Health

Regulations (IHR, 2005), complemented by monitoring the official ministries of health websites and social media accounts. Since 22 March 2020, global data is compiled through WHO region-specific dashboards, and/or aggregate count data reported to WHO headquarters. Counts primarily reflect laboratory-confirmed cases and deaths, based upon WHO case definitions; although some departures may exist due to local adaptations. Counts include both domestic and repatriated cases. Case detection, definitions, testing strategies, reporting practice, and lag times differ between countries, territories, and areas. These factors, amongst others, influence the counts presented with variable under or overestimation of true case and death counts, and variable delays to reflecting these data at a global level."

F5090_2 >>> COVID-19 PANDEMIC: CUMULATIVE N INFECTIONS PER MILLION - TIME T-1
F5090_3 >>> COVID-19 PANDEMIC: CUMULATIVE N INFECTIONS PER MILLION - TIME T-2

Number of COVID-19 cases reported to World Health Organization (WHO) (cumulative total) per million at three time points.

0-900,000. N COVID-19 cases reported to WHO (Cumulative total) per million

999,997. NOT APPLICABLE

999,999. MISSING

VARIABLE NOTES: F5090_

F5090_ details the cumulative N of COVID-19 cases per million of population reported to the WHO at a weekend. F5090_ measures this at three time points: the number of cumulative infections per million reported at the week ending the week before the election (Time T); the number of cumulative infections per million reported in a polity at the weekend one year before the election date (Time T-1); and the number of cumulative infections per million reported in a polity at the weekend two years before the election date (Time T-2).

Definition: A pandemic is an epidemic of infectious disease that has spread across a large region or multiple or worldwide and affecting a substantial number of individuals. At the time of writing, COVID-19 was first discovered in November 2019. However, it is possible human-to-human transmission of the disease was occurring before this discovery. On January 11, 2020 the World Health Organization (WHO) was notified by Chinese authorities of a virus outbreak in Wuhan, China. On January 30, 2020, the World Health Organization classified COVID-19 as a Public Health Emergency of Concern before eventually declaring the Health situation as a pandemic on March 11, 2020.

Definition from WHO:

"From the 31 December 2019 to the 21 March 2020, the WHO collected the numbers of confirmed COVID-19 cases and deaths through official communications under the International Health Regulations (IHR, 2005), complemented by monitoring the official ministries of health websites and social media accounts. Since 22 March 2020, global data is compiled through WHO region-specific dashboards, and/or aggregate count data reported to WHO headquarters.

Counts primarily reflect laboratory-confirmed cases and deaths, based upon WHO case definitions; although some departures may exist due to local adaptations. Counts include both domestic and repatriated cases. Case detection, definitions, testing strategies, reporting practice, and lag times differ between countries, territories, and areas. These factors, amongst others, influence the counts presented with variable under or overestimation of true case and death counts, and variable delays to reflecting these data at a global level."

| VARIABLE NOTES: F5093_
|
| F5093_ details the cumulative N of COVID-19 vaccinations reported
| to the weekend. F5093_ measures this at three time points:
| the number of cumulative vaccinations reported at the week ending
| the week before the election (Time T); the number of cumulative
| vaccinations reported in a polity at the weekend one year before
| the election date (Time T-1); and the number of cumulative
| vaccinations reported in a polity at the weekend two years
| before the election date (Time T-2).
|
| The genetic sequence underlying the COVID-19 virus was published
| in January 2020, spurring a series of endeavors to develop a
| vaccination to address the severe symptoms of the virus.
| Throughout 2020, several different polities and entities
| endeavored to create vaccines. On December 2, 2020, the United
| Kingdom's Medicines and Healthcare Regulatory Agency temporarily
| approved a COVID-19 vaccine, becoming the first polity to approve
| and distribute a vaccine. This was quickly followed by European

Union and United States regulatory authorities, with vaccines becoming theoretically available to much of the world's population from 2021 onwards. However, the availability timeline varied considerably by polity. Consequently, for the years 2020 and before, CSES classified this variable as "NOT APPLICABLE: VACCINE NOT WIDELY AVAILABLE".

Definition: A pandemic is an epidemic of infectious disease that has spread across a large region or multiple or worldwide and affecting a substantial number of individuals.

At the time of writing, COVID-19 was first discovered in November 2019. However, it is possible human-to-human transmission of the disease was occurring before this discovery. On January 11, 2020 the World Health Organization (WHO) was notified by Chinese authorities of a virus outbreak in Wuhan, China. | ELECTION STUDY NOTES - TAIWAN (2024): F5093_1
|

| The last report of the F5093_1 variable for Taiwan was on
| 9/29/2023, and it reported 28314797 total number of COVID-19
| vaccination doses administered.

F5094_1 >>> COVID-19 PANDEMIC: CUMULATIVE N VACCINATIONS PER 100 -
 TIME T
F5094_2 >>> COVID-19 PANDEMIC: CUMULATIVE N VACCINATIONS PER 100 -
 TIME T-1
F5094_3 >>> COVID-19 PANDEMIC: CUMULATIVE N VACCINATIONS PER 100 -
 TIME T-2

Number of COVID-19 vaccinations (cumulative total) per 100 reported
at three time points.

.....

0-900. N COVID-19 VACCINATIONS PER 100

997. NOT APPLICABLE: VACCINE NOT WIDELY AVAILABLE

999. MISSING

| VARIABLE NOTES: F5094_
|

| F5094_ details the cumulative N of COVID-19 vaccinations per 100
| reported to the weekend. F5094_ measures at three time points:
| the number of cumulative vaccinations per 100 reported at the
| week ending the week before the election (Time T); the number of
| cumulative vaccinations per 100 reported in a polity at the week
| end one year before the election date (Time T-1); and the number
| of cumulative vaccinations per 100 reported in a polity at the
| weekend two years before the election date (Time T-2).

| The genetic sequence underlying the COVID-19 virus was published
| in January 2020, spurring a series of endeavors to develop a
| vaccination to address the severe symptoms of the virus.
| Throughout 2020, several different polities and entities
| endeavored to create vaccines. On December 2, 2020, the United
| Kingdom's Medicines and Healthcare Regulatory Agency temporarily
| approved a COVID-19 vaccine, becoming the first polity to approve
| and distribute a vaccine. This was quickly followed by European
| Union and United States regulatory authorities, with vaccines
| becoming theoretically available to much of the world's
| population from 2021 onwards. However, the availability
| timeline varied considerably by polity. Consequently, for the
| years 2020 and before, CSES classified this variable as

| "NOT APPLICABLE: VACCINE NOT WIDELY AVAILABLE."

| Definition: A pandemic is an epidemic of infectious disease that
| has spread across a large region or multiple or worldwide and
| affecting a substantial number of individuals.

| At the time of writing, COVID-19 was first discovered in November
| 2019. However, it is possible human-to-human transmission of the
| disease was occurring before this discovery. On January 11, 2020
| the World Health Organization (WHO) was notified by Chinese
| authorities of a virus outbreak in Wuhan, China. On January 30,
| 2020, the World Health Organization classified COVID-19 as a
| Public Health Emergency of Concern before eventually declaring
| the Health situation as a pandemic on March 11, 2020.

| Definition from WHO:

| "From the 31 December 2019 to the 21 March 2020, the WHO
| collected the numbers of confirmed COVID-19 cases and deaths
| through official communications under the International Health
| Regulations (IHR, 2005), complemented by monitoring the official
| ministries of health websites and social media accounts.
| Since 22 March 2020, global data is compiled through WHO
| region-specific dashboards, and/or aggregate count data reported
| to WHO headquarters.

| Counts primarily reflect laboratory-confirmed cases and deaths,
| based upon WHO case definitions; although some departures may
| exist due to local adaptations. Counts include both domestic and
| repatriated cases. Case detection, definitions, testing
| strategies, reporting practice, and lag times differ between
| countries, territories, and areas. These factors, amongst others,
| influence the counts presented with variable under or
| overestimation of true case and death counts, and variable delays
| to reflecting these data at a global level."

Party Facts numeric party identifier for PARTY [A/B/C/D/E/F/G/H/I].

0003-9089. PARTY FACTS PARTY/COALITION IDENTIFIER

9999. NOT AVAILABLE IN PARTY FACTS PROJECT

| VARIABLE NOTES: F5203_A-I

| POTENTIAL PARTY/COALITION LEVEL BRIDGING IDENTIFIER

| F5203_ detail the party identification codes from the Party Facts
| project. Codes are provided for parties that are assigned an
| alphabetical code (A-I) by the CSES and for polities for which
| Party Facts identifiers are available.

| The complete list of PARTIES A-I and their Party Facts codes
| are detailed in Part 3 of the CSES MODULE 6 Codebook.

| Party Facts links datasets on political parties and provides an
| online platform about parties and their history as recorded in
| social science datasets.

| Political scientists have accumulated a large amount of data on
| political parties. With this information, we can trace the
| dynamics of party competition across countries and time. However,
| the many existing datasets with crucial information about
| political parties are difficult to link. Party Facts establishes
| an infrastructure that supports political scientists in linking
| parties across datasets.

| The Party Facts codes were retrieved from the project website,
| available at:

| <https://partyfacts.herokuapp.com/download/>
| (Date accessed: April 03, 2024).

-----
```

Respondent's vote choice for President in the first/second round of election, based on numeric party codes from the CSES Integrated Module Dataset (CSES IMD).

.....
 00000001-90000000. [SEE CSES IMD CODEBOOK PART 3 FOR HARMONIZED PARTY /COALITION NUMERICAL CODES]

9999980. CSES IMD NUMERIC PARTY CODE NOT ASSIGNED YET

9999988. NONE OF THE CANDIDATES

9999989. INDEPENDENT CANDIDATE

9999990. OTHER LEFT-WING CANDIDATE (NOT FURTHER SPECIFIED)

9999991. OTHER RIGHT-WING CANDIDATE (NOT FURTHER SPECIFIED)

9999992. OTHER CANDIDATE (NOT FURTHER SPECIFIED)

9999993. INVALID/ BLANK BALLOT

9999995. NOT APPLICABLE: NO ROLE OF PRESIDENT

9999996. NOT APPLICABLE: NO PRESIDENTIAL ELECTION/
 NO SECOND ROUND

9999997. VOLUNTEERED: REFUSED

9999998. VOLUNTEERED: DON'T KNOW

9999999. MISSING/ABSTAINED (DID NOT VOTE)

| VARIABLE NOTES: F6000_PR_

| POTENTIAL CSES PRODUCT BRIDGING IDENTIFIER

| F6000_ detail respondents' vote choice in the current election -
 | if applicable and respondents cast a ballot - based on
 | harmonized numeric identification codes applied in the CSES
 | Integrated Module Dataset (IMD), a CSES data product including
 | data from all four completed CSES Modules.

| By coding vote choice according to IMD standards, F6000_
 | variables thus ease appending the current version of CSES
 | MODULE 6 to the CSES IMD and thereby facilitate longitudinal
 | comparative research.

| In CSES IMD, each party/coalition receives a unique numerical

identifier that is consistent across modules. This seven-digit numerical identifier, on which coding for F6000_ is based, contains information on the polity and a unique numerical value to distinguish the party/coalition. Hence, numerical party/coalition codes are harmonized across Modules within CSES IMD. For more detailed information on how CSES codes parties/coalitions, please see Part 3 of the CSES IMD Codebook.

The harmonized and consistent codes for parties/coalitions are detailed in Part 3 of the CSES IMD Codebook. Users can search for the following term: "CSES IMD HARMONIZED PARTY/COALITION NUMERICAL CODES".

The corresponding variables to F6000_ in the CSES IMD are:

F6000_PR_1: IMD3002_PR_1
 F6000_PR_2: IMD3002_PR_2
 F6000_LH_PL: IMD3002_LH_PL
 F6000_LH_DC: IMD3002_LH_DC

Codes are provided in F6000_PR_ for parties that are assigned a harmonized IMD numeric party code by the CSES and for polities which are at least represented once in the CSES IMD.

Parties that are not represented in the IMD and have thus not been assigned an IMD numeric party code yet are coded "999980. IMD NUMERIC PARTY CODE NOT ASSIGNED YET" in F6000_PR_ and are listed in the table below.

+++ TABLE: PARTIES INCLUDED IN F3011_PR_ FOR WHICH IMD NUMERIC PARTY CODES HAVE NOT BEEN ASSIGNED YET

CSES MODULE 6 NUMERICAL CODE AND PARTY/COALITION NAME	CSES MODULE 6 ALPHABETICAL PARTY CODE (IF APPLICABLE)
--	--

BRAZIL (2022):

076005. Brazil Union (UNIAO)	PARTY E
076008. Popular Unity (UP)	

FRANCE (2022):

250004. Reconquest	PARTY D
--------------------	---------

MONTENEGRO (2023):

499001. Movement Europe Now!	PARTY A
499019. United Montenegro (UCG)	

TURKIYE (2023):

792004. Homeland Party	PARTY D
------------------------	---------

Users are advised that appending the CSES MODULE 6 dataset to CSES IMD requires renaming F6000_ variables in accordance with IMD naming conventions first.

In what follows, we provide example syntax on how appending can be achieved in STATA:

```

| ** // RENAMING F1003_1 ID VARIABLE AND F6000_ VARIABLES ACCORDING
| ** TO IMD STANDARDS
|
| rename F1003_1 IMD1005
| rename F6000_PR_1 IMD3002_PR_1
| rename F6000_PR_2 IMD3002_PR_2
| rename F6000_LH_PL IMD3002_LH_PL
| rename F6000_LH_DC IMD3002_LH_DC
|
| ** // SAVING MODULE 6 DATASET
| save "cses6.dta", replace
|
| ** // APPENDING CSES MODULE 6 DATASET TO CSES IMD
| use "cses_imd.dta", clear
| append using "cses6.dta"
|
| ** // END OF EXAMPLE CODE
|
| Further, users should note that upon appending the CSES MODULE 6
| dataset to IMD, code "9999980. CSES IMD NUMERIC PARTY CODE NOT
| ASSIGNED YET" will not be labeled yet, as this code was newly
| introduced in F6000_ and has hence not been envisaged for IMD.

```

```

-----
F6000_LH_PL >>> IMD BRIDGING VARIABLE: CURRENT LOWER HOUSE ELECTION:
VOTE CHOICE: PARTY LIST
-----

```

Respondent's vote choice for party list in the current Lower House elections, based on numeric party codes from the CSES Integrated Module Dataset (CSES IMD).

VARIABLE NOTES: F6000_LH_PL

POTENTIAL CSES PRODUCT BRIDGING IDENTIFIER

F6000_ detail respondents' vote choice in the current election - if applicable and respondents cast a ballot - based on harmonized numeric identification codes applied in the CSES Integrated Module Dataset (IMD), a CSES data product including data from all four completed CSES Modules.

By coding vote choice according to IMD standards, F6000_ variables thus ease appending the current version of CSES MODULE 6 to the CSES IMD and thereby facilitate longitudinal comparative research.

In CSES IMD, each party/coalition receives a unique numerical identifier that is consistent across modules. This seven-digit numerical identifier, on which coding for F6000_ is based, contains information on the polity and a unique numerical value to distinguish the party/coalition. Hence, numerical party/coalition codes are harmonized across Modules within CSES IMD. For more detailed information on how CSES codes parties/coalitions, please see Part 3 of the CSES IMD Codebook.

The harmonized and consistent codes for parties/coalitions are detailed in Part 3 of the CSES IMD Codebook. Users can search for the following term: "CSES IMD HARMONIZED PARTY/COALITION NUMERICAL CODES".

The corresponding variables to F6000_ in the CSES IMD are:

F6000_PR_1: IMD3002_PR_1
 F6000_PR_2: IMD3002_PR_2
 F6000_LH_PL: IMD3002_LH_PL
 F6000_LH_DC: IMD3002_LH_DC

Codes are provided in F6000_LH_PL for parties that are assigned a harmonized IMD numeric party code by the CSES and for polities which are at least represented once in the CSES IMD. Parties that are not represented in the IMD and have thus not been assigned an IMD numeric party code yet are coded "999980. IMD NUMERIC PARTY CODE NOT ASSIGNED YET" in F6000_LH_PL and are listed in the table below.

+++ TABLE: PARTIES INCLUDED IN F3011_LH_PL FOR WHICH IMD NUMERIC PARTY CODES HAVE NOT BEEN ASSIGNED YET

CSES MODULE 6 NUMERICAL CODE AND PARTY/COALITION NAME	CSES MODULE 6 ALPHABETICAL PARTY CODE (IF APPLICABLE)

AUSTRIA (2024):	

040007. The Beer Party (BIER)	PARTY G
040008. Madeleine Petrovic List (KMG)	
040009. Change	
040010. MFG Austria - People Freedom Fundamental Rights (MFG)	
040011. Gaza List: Voices against the Genocide (GAZA)	
BRAZIL (2022):	
076005. Brazil Union (UNIAO)	PARTY E
DENMARK (2022):	
208003. Moderates (M)	PARTY C
208005. Denmark Democrats - Inger Stojberg	PARTY E
208013. Independent Greens (FG)	
MONTENEGRO (2023):	
499001. Movement Europe Now!	PARTY A
499002. Together! (DPS-SD-DUA-LP)	
499003. For the Future of Montenegro (NSD-DNP-RP)	
499004. Aleksa and Dritan - Count Bravely! (Demokrate-URA)	
499006. SNP - DEMOS Alliance	
499008. Justice for All!	
499009. Reversal for a Safe Montenegro	
499010. Albanian Alliance	
499011. People's Coalition	
499014. Yes we can	
NEW ZEALAND (2023):	
554008. New Zealand Loyal Party (NZL)	PARTY H
554009. NewZeal	
554011. DemocracyNZ	
554012. Animal Justice Party Aotearoa New Zealand (AJP)	
554014. Leighton Baker Party	
POLAND (2023):	
616003. Third Way (TD)	
616010. There is One Poland (PJJ)	
SLOVAKIA (2023):	
703003. Voice - Social Democracy (Hlas-SD)	PARTY C
703008. Movement REPUBLIKA (HR)	PARTY H
703009. Hungarian Alliance (MSSA)	PARTY I
703010. Democrats	
703013. Communist Party of Slovakia (KSS)	
703015. Hungarian Forum (MF)	
703016. MySlovensko	
703017. Justice	
SLOVENIA (2022):	
705001. Freedom Movement (GS)	PARTY A
705005. The Left	PARTY E
705006. List of Marjan Sarec (LMS)	PARTY F
705007. Let's Connect Slovenia (PoS)	PARTY G
705008. Resni.ca	PARTY H
705009. Party of Alenka Bratusek (SAB)	PARTY I

```
| 705010. Healthy Society Movement (ZD)
| 705011. Our Future and Good State (SNP + DD)
| 705012. Pirate Party (Pirati)
| 705013. Our Country
| 705015. VESNA - Green Party (VESNA)
| 705017. List of Boris Popovic - Let's Digitize Slovenia (LBP)
```

```
| SWITZERLAND (2023):
| 756004. The Center (DM/LC) PARTY D
```

```
| TAIWAN (2024):
| 158005. Taiwan Obasang Political Equality Party
| 158012. Judicial Reform Party
```

```
| TURKIYE (2023):
| 792004. Homeland Party PARTY D
| 792012. Party of Greens and the Left Future (YSP) PARTY H
| 792013. New Welfare Party (YRP) PARTY I
| 792014. Victory Party (ZP)
| 792015. Workers' Party of Turkiye (TIP)
```

```
| -----
| Users are advised that appending the CSES MODULE 6 dataset to
| CSES IMD requires renaming F6000_ variables in accordance with
| IMD naming conventions first.
| In what follows, we provide example syntax on how appending
| can be achieved in STATA:
```

```
| ** // RENAMING F1003_1 ID VARIABLE AND F6000_ VARIABLES ACCORDING
| ** TO IMD STANDARDS
|
| rename F1003_1 IMD1005
| rename F6000_PR_1 IMD3002_PR_1
| rename F6000_PR_2 IMD3002_PR_2
| rename F6000_LH_PL IMD3002_LH_PL
| rename F6000_LH_DC IMD3002_LH_DC
|
| ** // SAVING MODULE 6 DATASET
| save "cses6.dta", replace
|
| ** // APPENDING CSES MODULE 6 DATASET TO CSES IMD
| use "cses_imd.dta", clear
| append using "cses6.dta"
|
| ** // END OF EXAMPLE CODE
```

```
| Further, users should note that upon appending the CSES MODULE 6
| dataset to IMD, code "9999980. CSES IMD NUMERIC PARTY CODE NOT
| ASSIGNED YET" will not be labeled yet, as this code was newly
| introduced in F6000_ and has hence not been envisaged for IMD.
```

```
| -----
F6000_LH_DC >>> IMD BRIDGING VARIABLE: CURRENT LOWER HOUSE ELECTION:
```

VOTE CHOICE: DISTRICT CANDIDATE

Respondent's vote choice for district candidate in the current Lower House elections, based on numeric party codes from the CSES Integrated Module Dataset (CSES IMD).

0000001-9000000. [SEE CSES IMD CODEBOOK PART 3 FOR HARMONIZED PARTY /COALITION NUMERICAL CODES]

9999980. CSES IMD NUMERIC PARTY CODE NOT ASSIGNED YET

9999988. NONE OF THE CANDIDATES/PARTIES

9999989. INDEPENDENT CANDIDATE

9999990. OTHER LEFT-WING CANDIDATE/PARTY
(NOT FURTHER SPECIFIED)

9999991. OTHER RIGHT-WING CANDIDATE/PARTY
(NOT FURTHER SPECIFIED)

9999992. OTHER CANDIDATE/PARTY (NOT FURTHER SPECIFIED)

9999993. INVALID/ BLANK BALLOT

9999995. NOT APPLICABLE: NO DISTRICT CANDIDATE VOTE

9999996. NOT APPLICABLE: NO LOWER HOUSE ELECTION

9999997. VOLUNTEERED: REFUSED

9999998. VOLUNTEERED: DON'T KNOW

9999999. MISSING/ABSTAINED (DID NOT VOTE)

VARIABLE NOTES: F6000_LH_DC

POTENTIAL CSES PRODUCT BRIDGING IDENTIFIER

F6000_ detail respondents' vote choice in the current election - if applicable and respondents cast a ballot - based on harmonized numeric identification codes applied in the CSES Integrated Module Dataset (IMD), a CSES data product including data from all four completed CSES Modules.

By coding vote choice according to IMD standards, F6000_ variables thus ease appending the current version of CSES MODULE 6 to the CSES IMD and thereby facilitate longitudinal comparative research.

In CSES IMD, each party/coalition receives a unique numerical identifier that is consistent across modules. This seven-digit numerical identifier, on which coding for F6000_ is based, contains information on the polity and a unique numerical value to distinguish the party/coalition. Hence, numerical party/coalition codes are harmonized across Modules within CSES IMD. For more detailed information on how CSES codes
